

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

SAMSUNG ELECTRONICS CO., LTD.
Petitioner

v.

IBEX PT HOLDINGS CO., LTD.
Patent Owner

Case IPR2018-00012
Patent No. 8,654,855

PETITIONER'S NOTICE OF APPEAL

Director of the United States Patent and Trademark Office
c/o Office of the General Counsel
Madison Building East, 10B20
600 Dulany Street
Alexandria, VA 22314-5793

Notice is hereby given, pursuant to 37 C.F.R. § 90.2(a), that Petitioner Samsung Electronics Co., Ltd. (“Petitioner”) appeals to the United States Court of Appeals for the Federal Circuit from the Final Written Decision entered on April 10, 2019 (Paper 30) (the “Final Written Decision”) by the United States Patent and Trademark Office, Patent Trial and Appeal Board (the “Board”), and from all underlying orders, decisions, rulings, and opinions. A copy of the Final Written Decision is attached.

In accordance with 37 C.F.R. § 90.2(a)(3)(ii), Petitioner indicates that the issues on appeal include, but are not limited to, the Board’s ruling that Petitioner has not demonstrated, by a preponderance of the evidence, that claims 1-5 of U.S. Patent No. 8,654,855 are unpatentable over the prior art, and any findings or determinations supporting or related to that ruling including, without limitation, the Board’s determination that the asserted prior art reference did not constitute a printed publication under 35 U.S.C. § 102(a), the Board’s interpretation of the prior art, and the Board’s interpretation of expert and factual evidence.

Simultaneous with this submission, a copy of this Notice of Appeal is being filed with the Board. In addition, the Notice of Appeal and the required fee are

being filed electronically with the Clerk of Court for the United States Court of Appeals for the Federal Circuit.

Respectfully submitted this 12th day of June, 2019.

Respectfully submitted,

Dated: June 12, 2019

CERTIFICATE OF SERVICE

The undersigned certifies that, in addition to being filed electronically through Patent Trial and Appeal Board End to End (PTAB E2E), the original version of this Notice of Appeal was filed by overnight express delivery on June 12, 2019 with the Director of the United States Patent and Trademark Office, at the following address:

Office of the General Counsel
United States Patent and Trademark Office
P.O. Box 1450
Alexandria, Virginia 22313-1450

The undersigned also certifies that a true and correct copy of this Notice of Appeal and the required fee were filed electronically via CM/ECF on June 12, 2019, with the Clerk of Court for the United States Court of Appeals for the Federal Circuit.

The undersigned also certifies that a true and correct copy of this Notice of Appeal was served on June 12, 2019, on counsel of record for Patent Owner Ibox PT Holdings, Ltd. by electronic mail (by agreement of the parties) at the following addresses:

etp@bskb.com

dab@bskb.com

v.

IBEX PT HOLDINGS CO., LTD.,
Patent Owner.

Case IPR2018-00012
Patent 8,654,855 B2

Before LYNNE E. PETTIGREW, BARBARA A. PARVIS, and
KIMBERLY McGRAW, *Administrative Patent Judges*.

McGRAW, *Administrative Patent Judge*.

FINAL WRITTEN DECISION
35 U.S.C. § 318(a) and 37 C.F.R. § 42.73

I. INTRODUCTION

In this *inter partes* review, instituted pursuant to 35 U.S.C. § 314, Samsung Electronics Co., Ltd. (“Petitioner”) challenges claims 1–5 of U.S. Patent No. 8,654,855 B2 (Ex. 1001, “the ’855 patent”), owned by Ibex PT Holdings Co., Ltd. (“Patent Owner”). This Final Written Decision is entered pursuant to 35 U.S.C. § 318(a) and 37 C.F.R. § 42.73. For the reasons discussed below, Petitioner has not shown by a preponderance of the evidence that claims 1–5 of the ’855 patent are unpatentable on the ground asserted in the Petition.

A. *Procedural History*

Petitioner filed a Petition for *inter partes* review of claims 1–5 of the ’855 patent. Paper 1 (“Pet.”). Patent Owner filed a Preliminary Response. Paper 5. Applying the standard set forth in 35 U.S.C. § 314(a), which requires demonstration of a reasonable likelihood that Petitioner would prevail with respect to at least one challenged claim, we instituted an *inter partes* review of all challenged claims on the sole unpatentability ground

asserted in the Petition—obviousness under 35 U.S.C. § 103(a)¹ over the combination of WD4-v2,² Lin,³ and Zhou II.⁴ Paper 6 (“Inst. Dec.”).

Following institution, Patent Owner filed an authorized Motion to Submit Supplemental Information (“Paper 9”) “relating to the public availability of [WD4-v2] the primary reference” (*id.* at 1), which Patent Owner opposed (Paper 11). On July 25, 2018, we granted Petitioner’s motion. Thereafter, Patent Owner filed its Response (Paper 17, “PO Resp.”), to which Petitioner filed a Reply (Paper 20, “Pet. Reply”). An oral hearing was held on December 12, 2018, and a copy of the hearing transcript has been entered into the record. Paper 29 (“Tr.”).⁵

B. The ’855 Patent

According to Petitioner and its declarant, Mr. Benjamin Bross, the ’855 patent and the cited prior art generally relate to video coding technologies, and more particularly to a merge mode during video coding. Pet. 8 (citing Ex. 1002 ¶ 27). Petitioner asserts that the merge mode allows a

¹ The Leahy–Smith America Invents Act, Pub. L. No. 112–29, 125 Stat. 284 (2011) (“AIA”), amended 35 U.S.C. §§ 102 and 103. Because the ’855 patent has an effective filing date before the effective date of the applicable AIA amendments, we refer to the pre-AIA version of §§ 102 and 103.

² Benjamin Bross et al., *WD4: Working Draft 4 of High-Efficiency Video Coding*, JCTVC-F803 (version 2) (uploaded Aug. 9, 2011) (Ex. 1067) (“WD4-v2”).

³ U.S. Patent Publ’n No. 2012/0236942 A1, published Sept. 20, 2012 (Ex. 1014) (“Lin”).

⁴ Minhua Zhou, *CE1: Evaluation on A.09, A.13-16 and an alternative solution*, JCTVC-F081 (version 2) (uploaded July 11, 2011) (Ex. 1031) (“Zhou II”).

⁵ A consolidated hearing was held for this proceeding and IPR2018-00011, also involving the ’855 patent.

current block in a picture to inherit motion information from spatially or temporally neighboring blocks, thereby reducing the amount of motion information to be coded for the current block. *Id.* at 8–9. Mr. Bross explains that it “is referred to as a merge mode because the current block and spatially or temporally neighboring block(s) form a merged region sharing the same motion information.” Ex. 1002 ¶ 29.

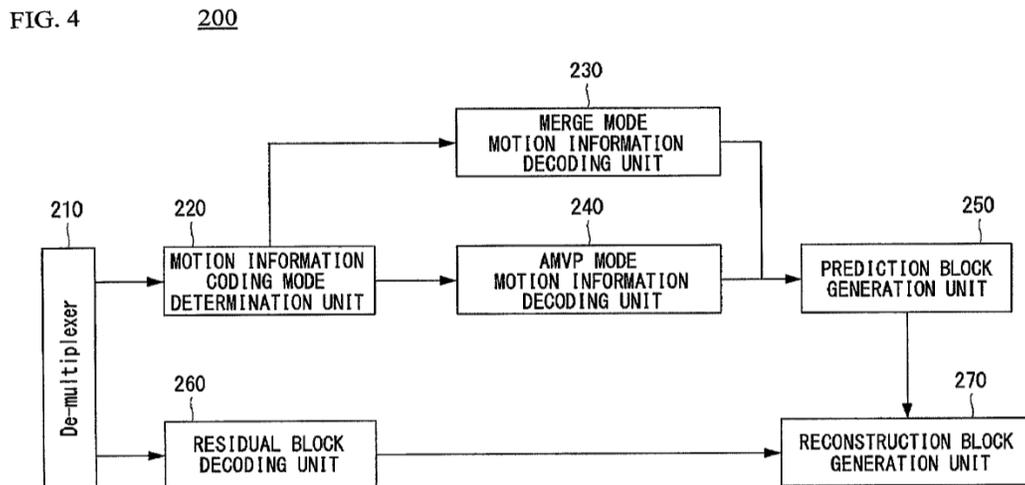

The ’855 patent states that the invention “relates to an apparatus for decoding motion information and, more particularly, to an apparatus for decoding motion information in merge mode for reconstructing motion information coded in merge mode.” Ex. 1001, 1:16–19. According to the ’855 patent, the motion information includes a reference picture index (indicating any one of previously coded and reconstructed pictures) and a motion vector. *Id.* at 2:58–61. In a method known as inter-prediction coding, in which a current block is generated based on a block from a previous picture that is similar to the current block, motion information corresponding to the current block is transmitted. *Id.* at 1:30–35. The ’855 patent alleges that “the amount of motion information to be transmitted (e.g., a motion vector and a reference picture index) is gradually increas[ing] . . . [and thus] there is a need for an apparatus capable of reducing the amount of motion information to be transmitted more effectively.” *Id.* at 1:36–43.

The ’855 patent discloses encoding of motion information in merge mode:

Merge mode is applied when a merge candidate having the same motion information as a current block is present. Merge mode is applied when a current block has a different size from a coding unit or when a residual signal is present if a current block has the same size as a coding unit.

Id. at 3:21–25. The alleged invention described in the '855 patent “provides an apparatus for decoding motion information in merge mode for effectively reconstructing motion information coded in merge mode.” *Id.* at 1:47–49.

Figure 4, reproduced below, is a block diagram of an inter-prediction decoding apparatus disclosed in the '855 patent:

Id. at 2:29–30, 8:28–29. As shown in Figure 4 above, inter-prediction decoding apparatus 200 includes, among other things, merge mode motion information decoding unit 230, prediction block generation unit 250, and residual block decoding unit 260. *Id.* at 8:30–36.

The '855 patent describes in detail three embodiments of merge mode motion information decoding unit 230. *Id.* at 2:31–39, 10:3–14:51, Figs. 5–7. Figure 5, illustrating the first embodiment, is reproduced below:

FIG. 5

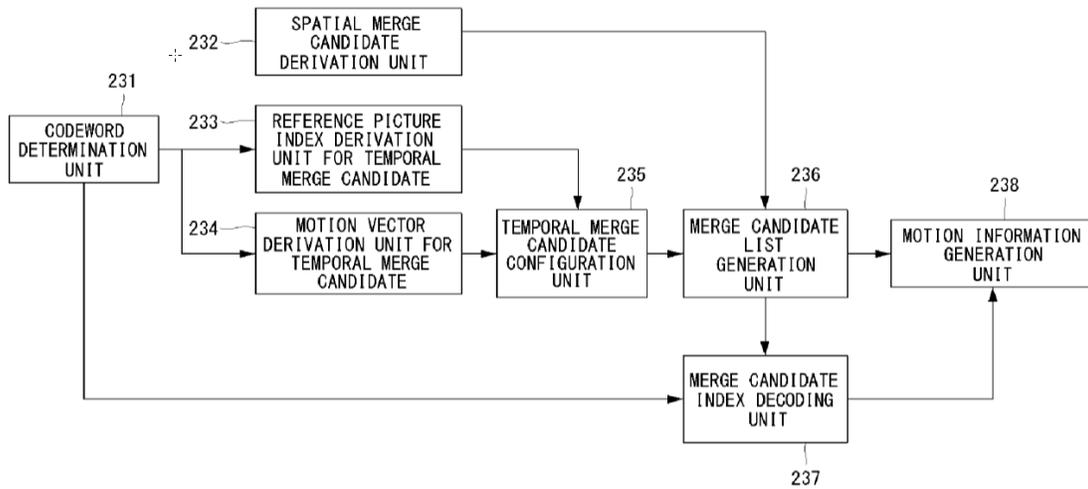

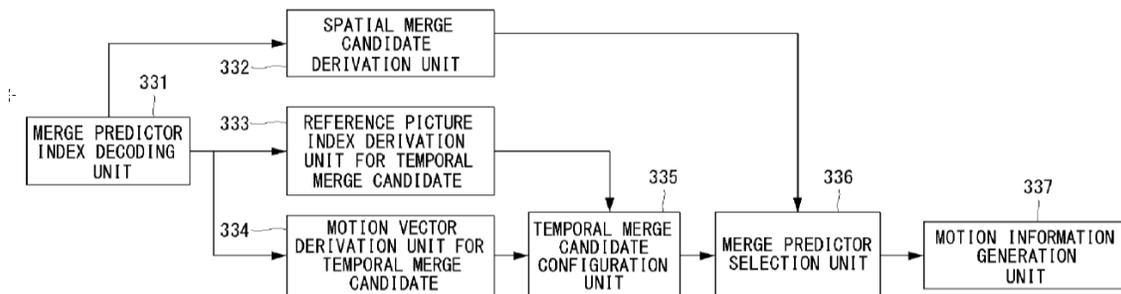

Figure 5 above is a block diagram of a first embodiment of merge mode motion information decoding unit 230. *Id.* at 2:31–36. This first embodiment includes, among other elements, spatial merge candidate derivation unit 232, which “sets valid motion information of a block that is adjacent to a current block as a spatial merge candidate.” *Id.* at 10:29–11:5. It also includes reference picture index derivation unit 233 for obtaining the reference picture index of the temporal merge candidates of a current block. *Id.* at 11:6–45. In addition, it includes motion vector derivation unit 234, which determines a picture to which a temporal merge candidate belongs, obtains a temporal merge candidate block within the temporal merge candidate picture, and sets the motion vector of the temporal merge candidate as the motion vector of the selected temporal merge candidate prediction block. *Id.* at 11:46–12:26. Temporal merge candidate configuration unit 236 then determines a reference picture index obtained by reference picture index derivation unit 233 and a motion vector obtained by

motion vector derivation unit 234 as the reference picture index and motion vector of a temporal merge candidate. *Id.* at 12:31–36.

Figure 6, illustrating the second embodiment of merge mode motion information decoding unit 230, is reproduced below:

FIG. 6

The second embodiment, shown in Figure 6 above, includes several elements that operate in the same way as those in the first embodiment. *Id.* at 13:13–23, 13:57–62, Fig. 6 (blocks 332–335, 337). Similarly, the third embodiment includes several elements that operate in the same way as those in the first or second embodiment. *Id.* at 14:4–12, Fig. 7 (blocks 431–436, 438).

C. Illustrative Claim

Petitioner challenges all claims (i.e., claims 1–5) of the '855 patent. Independent claim 1 is illustrative of the claimed subject matter:

1. An apparatus for decoding motion information in merge mode, comprising:
 - a merge mode motion information decoding unit configured to decode motion information using available spatial

and temporal merge candidates when a motion information encoding mode of a current block indicates a merge mode;

a prediction block generation unit configured to generate a prediction block of the current block using the decoded motion information; and

a residual block decoding unit configured to generate a two-dimensional quantization block by inversely scanning residual signals, inversely quantize the two-dimensional quantization block using a quantization parameter, and generate a residual block by inversely transforming the inverse-quantized block,

wherein a motion vector of the temporal merge candidate is selected among motion vectors of a first merge candidate block and a second merge candidate block based on a position of the current block within a slice or a largest coding unit, and the motion vector of the second merge candidate block is selected as the motion vector of the temporal merge candidate if the current block is adjacent to a lower boundary of the largest coding unit.

Ex. 1001, 16:52–17:8.

D. Related Matters

Concurrently with this proceeding, we instituted a second *inter partes* review of claims 1–5 of the '855 patent based on another petition filed by Petitioner. *Samsung Elecs. Co. v. Ibex PT Holdings Co.*, Case IPR2018–00011 (PTAB Apr. 13, 2018) (Paper 6). We previously denied institution of *inter partes* review based on two earlier petitions filed by Petitioner challenging claims 1–5 of the '855 patent. *Samsung Elecs. Co. v. Ibex PT Holdings Co.*, Case IPR2017-00101 (PTAB Apr. 20, 2017) (Paper 6); *Samsung Elecs. Co. v. Ibex PT Holdings Co.*, Case IPR2017-00102 (PTAB Apr. 20, 2017) (Paper 6).

We also instituted *inter partes* reviews of two patents related to the '855 patent—U.S. Patent Nos. 9,025,668 B2 (“the '668 patent”) and 8,774,279 B2 (“the '279 patent”)—based on petitions filed by Petitioner. *Samsung Elecs. Co. v. Ibex PT Holdings Co.*, Case IPR2018-00092 (PTAB May 9, 2018) (Paper 6) (challenging the '668 patent); *Samsung Elecs. Co. v. Ibex PT Holdings Co.*, Case IPR2018–00094 (PTAB May 9, 2018) (Paper 6) (challenging the '668 patent); *Samsung Elecs. Co. v. Ibex PT Holdings Co.*, Case IPR2018-00093 (PTAB May 3, 2018) (Paper 6) (challenging the '279 patent); *Samsung Elecs. Co. v. Ibex PT Holdings Co.*, Case IPR2018–00095 (PTAB May 3, 2018) (Paper 6) (challenging the '279 patent). Those reviews remain pending.

II. DISCUSSION

A. *Legal Principles*

To prevail on its challenge to Patent Owner’s claims, Petitioner must demonstrate by a preponderance of the evidence that the claims are unpatentable. 35 U.S.C. § 316(e); 37 C.F.R. § 42.1(d). A claim is unpatentable for obviousness under 35 U.S.C. § 103(a) if the differences between the claimed subject matter and the prior art are “such that the subject matter, as a whole, would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.” *KSR Int’l Co. v. Teleflex Inc.*, 550 U.S. 398, 406 (2007). The question of obviousness is resolved on the basis of underlying factual determinations, including (1) the scope and content of the prior art; (2) any differences between the claimed subject matter and the prior art; (3) the level of skill in the art; and (4) when in evidence, objective indicia of

non-obviousness (i.e., secondary considerations).⁶ *Graham v. John Deere Co.*, 383 U.S. 1, 17–18 (1966).

B. Level of Ordinary Skill in the Art

Petitioner contends that a person of ordinary skill in the art at the time of the alleged invention of the '855 patent

would have had at least a B.S. degree in electrical engineering, or equivalent thereof, and at least three to four years of experience in the relevant field, which includes video coding technology, or an M.S. degree in electrical engineering and at least two to three years of experience with video coding technology. More education can supplement practical experience.

Pet. 8 (citing Ex. 1002 ¶¶ 21–22). Patent Owner contends that a person of ordinary skill in the art would have had credentials that “reflect a practical understanding of the design considerations and challenges associated with the video coding technology at issue in the '855 patent,” such as “an engineering degree and three or more years of actual industry experience.” PO Resp. 20. The parties’ proposals do not differ in any significant way. We adopt Petitioner’s articulation of the level of ordinary skill in the art, which is supported explicitly by the testimony of Mr. Bross and is commensurate with the level of ordinary skill as reflected in the prior art. *See Okajima v. Bourdeau*, 261 F.3d 1350, 1355 (Fed. Cir. 2001).

C. Prior Art Status of Zhou II

Zhou II is a document developed by the Joint Collaborative Team on Video Coding (“JCT-VC”) and submitted as a proposal for consideration in

⁶ The parties do not address secondary considerations, which therefore do not constitute part of our analysis.

the sixth JCT-VC meeting, which was held in Torino, Italy in July 2011. *See* Ex. 1057, 1, 97; Pet 20 (citing Ex. 1002 ¶ 187); Ex. 1002 ¶ 66 (stating JCTVC-F081 (version 2) (“Zhou II”) was submitted as a proposal to the JCT-VC on July 11, 2001); Ex. 1095, 1 (showing version 2 of JCTVC-F081 was uploaded to the JCTVC website on July 11, 2001). Petitioner asserts that Zhou II, in combination with WD4-v2 and Lin, discloses, *inter alia*, selecting a “motion vector of the temporal merge candidate” as recited in claim 1. *See* Pet. 54–62; *see also id.* at 58 (stating Zhou II discloses “selecting a motion vector of a temporal merge candidate among motion vectors of a first merge candidate block . . . and a second merge candidate block . . . based on a position of the current block . . . within a largest coding unit”). Petitioner contends that a POSITA would have modified the processes and systems of WD4-v2 to include processes where the motion vector of the second merge candidate block (“BR”) is selected as the motion vector of the temporal merge candidate if the current block (“PU8”) is adjacent to a lower boundary of the largest coding unit, like that disclosed by Zhou II. *Id.* at 58–59.

A threshold issue in this proceeding is whether Zhou II is a prior art printed publication under 35 U.S.C. § 102(a). *See* 35 U.S.C. § 311(b) (“A petitioner in an inter partes review may request to cancel as unpatentable 1 or more claims of a patent only on a ground that could be raised under section 102 or 103 and only on the basis of prior art consisting of patents or printed publications.”). Petitioner has the burden to establish by a preponderance of the evidence that Zhou II is a printed publication. *See* 35 U.S.C. § 316(e); *Medtronic, Inc. v. Barry*, 891 F.3d 1368, 1380 (Fed. Cir. 2018).

The determination of whether a document is a printed publication involves a case-by-case inquiry into the facts and circumstances surrounding the reference's disclosure to members of the public. *See Medtronic*, 891 F.3d at 1380; *In re Klopfenstein*, 380 F.3d 1345, 1350 (Fed. Cir. 2004). A document is considered a printed publication if it has been “disseminated or otherwise made available to the extent that persons interested and ordinarily skilled in the subject matter or art exercising reasonable diligence [could] locate it.” *Acceleration Bay, LLC v. Activation Blizzard Inc.*, 908 F.3d 765, 774 (Fed. Cir. 2018); *SRI Int’l, Inc. v. Internet Sec. Sys.*, 511 F.3d 1186, 1194 (Fed. Cir. 2008). Indexing a reference is not “a necessary condition for a reference to be publicly accessible,” but it is one among various factors that may bear on public accessibility. *In re Lister* F.3d 1307, 1311 (Fed. Cir. 2009); *see also Acceleration Bay*, 908 F.3d at 774 (stating “where indexing is concerned, . . . the ultimate question is whether the reference was available to the extent that persons interested and ordinarily skilled in the subject matter or art, exercising reasonable diligence, can locate it”).

Petitioner contends that Zhou II is a printed publication because (1) “[it was] uploaded to the JCT-VC document management site available to the public at large including at least hundreds of JCT-VC members” and (2) “[it was mirrored, i.e.,] uploaded[,] to the MPEG site available to hundreds of people” on at least its upload date of July 11, 2011, prior to the

January 20, 2012, effective filing date of the claims of the '855 patent.⁷
Pet. 18–19 (citing Ex. 1002 ¶¶ 186, 198–201; Ex. 1035 ¶¶ 15, 27–28).

Mr. Bross explains that the JCT-VC is a group of coding personnel from two parent organizations, VCEG⁸ and MPEG⁹, and was created in 2010 to develop a new generation HEVC standard (H.265) to replace the then-current H.264 standard. Ex. 1002 ¶ 187. According to Mr. Bross, starting in April 2010, the JCT-VC met quarterly for development of the new HEVC standard. *Id.* ¶ 188 (citing Ex. 1051, 1); Pet. 20. Mr. Bross provides a printout from the JTC-VC website, dated May 23, 2018 that identifies over thirty JCT-VC meetings. Ex. 1006 ¶ 4 (citing Ex. 1107, 1).

During these quarterly meetings, the JCT-VC considered proposals (“input” documents) submitted prior to the meeting and generated “output” documents based on the proposals. Pet. 20 (citing Ex. 1002 ¶ 188); PO Resp. 4. The number of documents associated with each meeting,

⁷ Petitioner asserts the earliest effective filing date of the claims of the '855 patent is January 20, 2012, the filing date of the '855 patent's parent application, PCT/KR2012/000523. Pet. 6–7, 17–18; *see* Ex. 1001, [63]. Patent Owner does not argue that the claims are entitled to the earlier August 29, 2011, filing date of Korean Patent Application No. 10-2011-0086524, to which the '855 claims priority. *See* Ex. 1001, [30], 1:7–12.

⁸ VCEG is Study Group 16 of ITU-T, the Telecommunication Standardization Sector of the International Telecommunication Union. Ex. 1002 ¶ 187 & n.23 (citing Exs. 1040–1044).

⁹ MPEG is Working Group 11 (WG 11) of SC 29, a subcommittee under Joint Technical Committee (JTC) 1 of the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC). Ex. 1002 ¶ 187 & n.24 (citing Exs. 1045–1046, 1050). JTC 1 provides a standards development environment, and SC 29 develops standards for coding of audio, picture, multimedia, and hypermedia information. Ex. 1002 ¶ 187 n.24 (citing Exs. 1047–1050).

including the number of input documents, varies. For example, the Meeting Report for sixth JCT-VC meeting held in July 2011, in Torino, Italy lists over 900 “documents of the JCT-VC meeting” in its Annex A and states that “approximately 700 input documents were discussed.” Ex. 1057, 1, 3, Annex A.

Petitioner and Mr. Bross contend that since at least 2011, the JCT-VC site was “organized in a hierarchical manner categorized by the JCT-VC meeting numbers.” Pet. 21; Ex. 1002 ¶¶ 194–195; Ex. 1006 ¶¶ 3–4. Mr. Bross states that the “All Meetings” link from the JCT-VC website (<http://phenix.int-evry.fr/jct/>) (Ex. 1107) identifies all of the meetings for the JCT-VC and “persons skilled and interested in the video coding technologies” could “navigat[e] to any meeting on the JCT-VC website” and “view the documents related to a particular meeting.” Ex. 1006 ¶¶ 3–4. “Depending when a person accessed this webpage, the number of meetings listed on the webpage would have been different.” *Id.* ¶ 4. For example, Dr. Bross asserts, in early January 2012, the All Meetings webpage would have listed, at most, only the first eight JCT-VC meetings. *See id.*

Petitioner explains that by navigating to any of the quarterly meetings (e.g., the sixth meeting held in July 2011), “a user could view the documents related to [that] meeting and download a document based on the information regarding the document such as the title and the source.” Pet. 21 (citing Ex. 1059 (page 1 of “Torino Meeting – Document Register”). Petitioner further states that to “view the different versions available for a document” from a particular meeting and to download one or more versions of the document, a “person interested in video coding technologies (the subject matter of the ’855 patent) would have been able to and could click on the JCT-VC

document number hyperlink provided on the JCT-VC website.” *Id.* at 21–222. “This would have led the person to the ‘Document information’ webpage for that document at that time.” *Id.* (citing Ex. 1095 (“Document information” webpage of JCTVC-F801 showing version 1 of the document was uploaded on July 1, 2011 and version 2 was uploaded on July 11, 2011)).

Petitioner also asserts that documents for each meeting are searchable by title and source (e.g., author). Reply 19 (citing Ex. 1002 ¶¶ 193–199; Ex. 1106 ¶¶ 3–9; Ex. 2008, 66:8–67:12). Mr. Bross explains that when a document is uploaded to the JCT-VC website, a document record is created that includes the “Title (e.g., suggesting the underlying subject matter) and a Source (e.g., authors) of the document.” Ex. 1002 ¶ 193.

Mr. Bross also asserts that in at least 2011–2012, any document uploaded onto the JCT-VC website was also “immediately available for download from the MPEG site.” Ex. 1002 ¶ 197; *id.* ¶196 (stating that when “any JCT-VC document was uploaded onto the JCT-VC site, the JCT-VC document was also mirrored, i.e., uploaded on the MPEG document management site”); Ex. 1041, 2 (stating the JCT will maintain a single document registry and an electronic archive, which will be linked to both the parent body websites).

Petitioner asserts that there were no restrictions (e.g., username/password) for downloading documents uploaded on the JCT-VC site and that this “process for accessing documents on the JCT-VC website has been the same since at least 2011.” Pet. 21–22 (citing Ex. 1035 ¶ 17; Ex. 1002 ¶ 192–195); *see also* Ex. 1041, 2 (stating the general policy of the JCT-VC was that “all input . . . documents of the JCT will be public”). Petitioner also asserts that although the MPEG site required a user to have a username

and password to access the site, these “credentials were regularly distributed to hundreds of MPEG members.” Pet. 23 (citing Ex. 1035 ¶¶ 21–26).

Patent Owner responds, *inter alia*, that Petitioner’s evidence of public accessibility is not sufficient to show Zhou II is a printed publication. *See* PO Resp. 13, 21–34, 46.

We agree with Patent Owner and find Petitioner has not provided sufficient evidence or argument that persons interested to show Zhou II was disseminated or otherwise made available to the extent that persons interested and ordinarily skilled in the subject matter exercising reasonable diligence could have located the document.

We disagree with Petitioner that Zhou II is a printed publication because it was uploaded to the JCT-VC document management site. Even if we agree with Petitioner’s contention that in 2011, “it would have been reasonable for someone interested in the latest Working Draft to have consulted the folder for the sixth JCT-VC meeting in Torino” (Reply 20 (citing Ex. 1002 ¶¶ 194–195; Ex. 1106 ¶¶ 4–5)), Petitioner has not shown that such a person, exercising reasonable diligence, could have located Zhou II from among the over 900 documents on the JCT-VC website that are associated with the sixth JCT-VC meeting. *See also* Pet. 21 (contending “persons interested in tracking the developments of the latest video coding standard would regularly visit the JCT-VC site to ensure that products and services they were developing were consistent with the HEVC Standard under development”) (citing Ex. 1002 ¶ 192). We disagree with Petitioner that a POSITA exercising reasonable diligence would have found Zhou II either from using the search functionality of the JCT-VC website or through

scrolling through the meeting report. *See* Reply 20–21 (citing Ex. 1002 ¶¶ 194–195; Ex. 1006 ¶¶ 3–9).

Regarding the search functionality of the JCT-VC website, Petitioner provides evidence that the documents for JCT-VC each meeting are searchable by author and title. *See* Ex. 1106 ¶¶ 3–9; *see also* Ex. 1120–1122 (providing examples of results from keyword searches for the terms “working draft,” “high-efficiency video coding,” and “draft” that Mr. Bross conducted on the JCT-VC website); Reply 20. Petitioner, however, has not provided sufficient evidence or argument that either the author or search terms from the title of Zhou II are meaningful search terms. For example, during oral argument, when asked how someone would find Zhou II on the website, counsel for Petitioner responded that “if you are in the field, you may . . . know that Mr. Zhou has been making contributions in this area, this temporal mode.” Tr. 27:26–28:2. Counsel admitted, however, that there is no evidence in the record as to how prominent Mr. Zhou might have been. *Id.* at 28:3–5. Nor has Petitioner provided any argument of evidence as to why a person interested and skilled in the art would search the documents of the sixth JCT-VC meeting using any terms from Zhou II’s title “Evaluation results on A.09, A.13–16 and an alternative solution.” Ex. 1031.

Thus, we find Petitioner has not shown that the terms in Zhou II’s title or its author are meaningful search terms that a person interested and skilled in the art would have used to locate Zhou II from searching the documents of the sixth JCT-VC meeting on the JCT-VC website. *See Acceleration Bay*, 908 F.3d at 773 (affirming Board’s finding that a website that allowed a user for view a list of technical reports indexed only by author or year was not

meaningfully indexed to allow a skilled artisan to locate the asserted prior art).

In addition, we note that Petitioner has not provided evidence demonstrating that, in fact, Zhou II would have been retrieved following a search using either the title or author. *See, e.g.*, Reply 20 (providing evidence that WD4-v2 could be located using search terms such as “working draft” or “High Efficiency Video Coding”/“High-Efficiency Video Coding” but not providing any evidence that Zhou II was retrieved as a result of any search).

We also disagree with Petitioner that a POSITA exercising reasonable diligence would have found Zhou “by scrolling through the various Torino documents.” *See* Reply 20–21. Petitioner asserts that an “artisan interested in video coding” can be expected to spend the minimal time to visit the JCT-VC website and perform “simple title searches in the Torino meeting document register to locate the then most current working draft available (WD4) or the technical topic covered by Zhou II, and even to scroll through the various Torino documents to locate these documents.” *Id.* (citing Ex. 1002 ¶¶ 194–195; Ex. 1106 ¶¶ 3–9) (emphasis omitted).

Petitioner has not persuasively explained how a person interested and skilled in the art, scrolling through the Torino documents, would have located Zhou II. During oral argument, counsel for Petitioner asserted:

Zhou II, without getting into too much of the technical detail, is about choosing the correct or the most efficient motion vector for a current frame based on a previous frame. And its title suggests some of that underlying subject matter so -- to one of ordinary skill at that time. So as you are scrolling through, you can look.

Id. at 27:18–22. Zhou II’s title recites “CE1: Evaluation results on A.09, A.13–16 and an alternative solution.” Petitioner provides no evidence to support counsel’s argument that Zhou’s title suggests choosing the correct or most efficient motion vector for a current frame based on a previous frame. Attorney arguments and conclusory statements that are unsupported by factual evidence are entitled to little probative value. *In re Geisler*, 116 F.3d 1465, 1470 (Fed. Cir. 1997). Nor does Petitioner persuasively explain how a person interested and skilled in the art scrolling through any other of the “Torino documents,” exercising reasonable diligence, would have found Zhou II. For example, page 97 of the 257 page Meeting Report of the sixth JCT-VC meeting recites the following information about Zhou II:

JCTVC-F081 CE1: Evaluation results on A.09, A.13–16 and an alternative solution [M. Zhou (TI)]

This contribution is relevant to CE1, and is discussed above in that context, but also contains a new proposal. The new proposal is the same as (or strongly similar to) item 1 of JCTVC-F465, and was asserted to be suitable as a cross-check of that proposal. Placed under consideration in [break-out group] BoG coordinated by B. Bross.

Ex. 1057, 97 (emphasis in original). Petitioner does not provide sufficient evidence or argument to explain why an interested artisan, scrolling through the Torino meeting report and seeing this discussion of document “JCTVC-F081,” would then have located version 2 of that document.

For the foregoing reasons, we conclude that Petitioner has not persuasively shown that a person interested and ordinarily skilled in the subject matter, exercising reasonable diligence, could have located Zhou II on the JCT-VC website, and thus, has not shown that Zhou II was publicly accessible by virtue of its uploading onto the JCT-VC website.

Regarding the uploading of Zhou II onto the MPEG website, Petitioner asserts the layout and the hierarchical structure of the MPEG website is generally the same as the JCT-VC site and that “a user could navigate to the document register for the relevant meeting (e.g., the sixth meeting in Torino) and then click on the MPEG document number, which would take the user to the corresponding ‘Document information’ webpage.” Reply 21–22 (citing Pet. 22–25; Ex. 1035 ¶¶ 18–20, 27–28). We determine that Zhou II was not accessible to a person of ordinary skill and interested in the art exercising reasonable diligence on the MPEG website for the same reasons we determine Zhou II was not publicly accessible to a person of ordinary skill and interested in the art on the JCT-VC website.

Petitioner, in its Reply, presents evidence and argument for the first time that Zhou II was disseminated at the sixth JCT-VC meeting in Torino in July, 2011 because it was “*presented and discussed*” during the meeting. Reply 16–17 (citing Ex. 1057, 23, 97) (emphasis added). This argument is an entirely new theory of public accessibility and exceeds the proper scope of a reply. *See* 37 C.F.R. § 42.23(b) (“A reply may only respond to arguments raised in the corresponding opposition or patent owner’s response.”).

For the foregoing reasons, we find Petitioner has not shown by a preponderance that Zhou II is a printed publication. Accordingly, Petitioner has not demonstrated by a preponderance of the evidence that claims 1–5 would have been obvious over WD4-v2, Lin, and Zhou II.

D. Prior Art Status of WD4-v2

The parties dispute whether WD4-v2 is a printed publication under 35 U.S.C. § 102(a). Because, as discussed *supra* in Section II.C, we

determine Petitioner has not shown by a preponderance of the evidence that Zhou II is a printed publication, and therefore, has not shown by a preponderance of the evidence that claims 1–5 would have been obvious over WD4-v2, Lin, and Zhou II, we need not, and do not, opine on whether WD4-v2 is a printed publication.

III. CONCLUSION

For the foregoing reasons, Petitioner has not demonstrated by a preponderance of the evidence that claims 1–5 of the '855 patent are unpatentable as obvious over the combination of WD4-v2, Lin, and Zhou II.

IV. ORDER

Accordingly, it is:

ORDERED that claims 1–5 of U.S. Patent No. 8,654,855 B2 have not been shown to be unpatentable on the ground asserted in the Petition; and

FURTHER ORDERED that, because this is a final written decision, parties to this proceeding seeking judicial review of our decision must comply with the notice and service requirements of 37 C.F.R. § 90.2.
