		21 7 1		

JURISDICTION AND VENUE

- 3. This action arises under the patent laws of the United States, Title 35 of the United States Code, and under the Declaratory Judgment Act, 28 U.S.C. § 2201. The Court has subject matter jurisdiction over this action under 28 U.S.C. §§ 1331, 1338(a), 2201(a) and 2202.
- 4. This Court has personal jurisdiction over pointSET because pointSET has a place of business in this state.
- 5. Venue is proper in this district under 28 U.S.C. §§ 1391(b), (c) and 1400(b) because a substantial part of the events that give rise to the claims herein occurred in this district and because pointSET is subject to personal jurisdiction in this district.

INTRADISTRICT ASSIGNMENT

6. This is an intellectual property action and as such it "shall be assigned on a district-wide basis". Civil L.R. 3.2(b).

THE PATENT IN SUIT

- 7. Tesla is seeking a declaratory judgment that Tesla does not infringe any claim of United States Patent No. 7,379,541 ("the '541 patent").
- 8. On its face, the '541 patent is entitled "Method and Apparatus for Setting Programmable Features of a Motor Vehicle" and was issued on May 27, 2008 (Exhibit A).

SUBSTANTIAL CONTROVERSY BETWEEN THE PARTIES

- 9. On April 30, 2013, an attorney for pointSET sent a letter by email to Tesla regarding the '541 patent. In the letter, pointSET alleges that "Tesla induces infringement of claim 6 of United States Patent No. 7,379,541" (Exhibit B).
- 10. The letter states that "pointSET is offering a one-time, fully-paid licensing flat fee of \$500,000" that "will cover both past and future use of the technology".
- 11. In the letter, pointSET states that it "reserves ... the right to seek damages going back as far as the last six years," but that "[s]hould Tesla remove the claimed technology within sixty days, [pointSET] will not seek damages for Tesla's past use of the technology ".

- 12. Enclosed with pointSET's letter to Tesla was a claim chart (Exhibit C) purporting to show an element-by-element analysis of claim 6 of the '541 patent and a "Model S Beta app".
- 13. The Model S Beta app is a smartphone application created by Tesla for use with its Model S vehicles. The Model S Beta app is available for downloading from the application distribution platform Google Play.
- 14. The Model S Beta app has not infringed and does not infringe, either directly or indirectly, any claim of the '541 patent, either literally or under the doctrine of equivalents.
- 15. As a result of the above events, a substantial controversy exists between Tesla and pointSET that is of sufficient immediacy and reality to warrant declaratory relief.

CLAIM FOR RELIEF

DECLARATORY JUDGMENT OF NON-INFRINGEMENT

- 16. Tesla incorporates herein the allegations of the preceding paragraphs.
- 17. A substantial controversy exists between Tesla and pointSET regarding the '541 patent that is of sufficient immediacy and reality to warrant declaratory relief.
- 18. Tesla requests the declaration of the Court that Tesla and the Model S Beta app do not infringe and have not infringed, either directly or indirectly, any claim of the '541 patent.

EXCEPTIONAL CASE

19. This case is exceptional against pointSET under 35 U.S.C. § 285.

PRAYER FOR RELIEF

WHEREFORE, Tesla prays for judgment as follows:

- (1) That Tesla does not infringe and has not infringed, directly or indirectly, the '541 patent;
- (2) That the Model S Beta app does not infringe and has not infringed, directly or indirectly, the '541 patent;
- (3) That pointSET, and all persons acting on its behalf or in concert with it, be permanently enjoined and restrained from charging, orally or in writing, that the '541 patent is infringed, directly or indirectly, by Tesla or the Model S Beta app;

DEMAND FOR JURY TRIAL

Tesla hereby requests a trial by jury.

Respectfully submitted,

Jonathan Butler, CA State Bar No. 229638 Steven Cooper, CA State Bar No. 143312 Richard Soderberg, MN State Bar No. 305637 (Application for Admission Pro Hac Vice Forthcoming)

(57) ABSTRACT

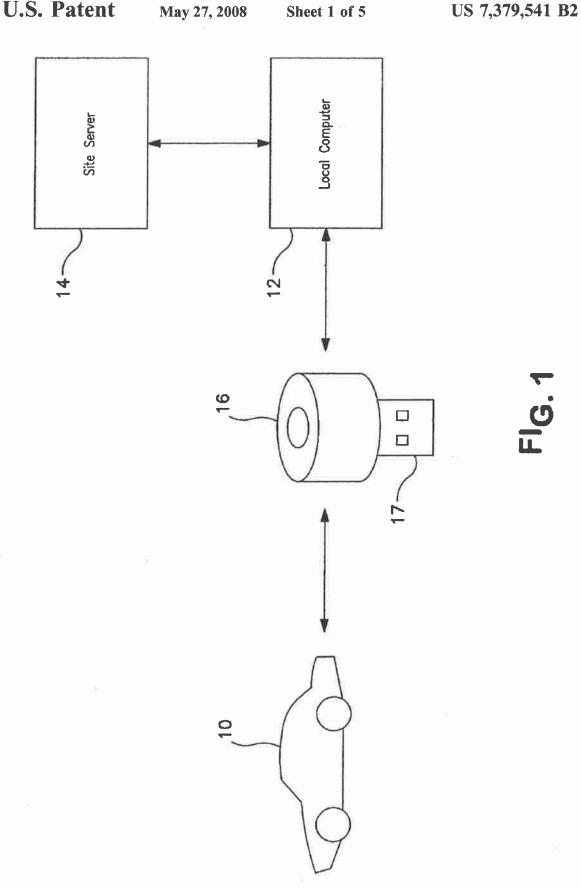

An interactive interface facilitates the setting of preferences and other programmable parameters of a motor vehicle. The interface is hosted by a server on a global computer network. The motor vehicle owner initiates a connection to the server and is presented with a graphical user interface for setting the preferences and features of the motor vehicle. Once the desired settings have been made, they are transferred to the motor vehicle using a portable transfer device, which may comprise a key for operating the motor vehicle.

No. 09/235,709, filed Jan. 22, 1999, now U.S. Pat. No. 6,415,023.

BACKGROUND OF THE INVENTION

1. Field of the Invention

This invention relates generally to the field of motor vehicles. More particularly, the invention provides a method and apparatus for conveniently setting various programmable features of a motor vehicle using a graphical user 25 interface accessed with a computer.

2. Prior Art

Motor vehicles, and automobiles in particular, have grown increasingly complex. A modern automobile may contain as many as fifty microprocessors controlling a wide variety of operational and convenience features. While much of the processing power is devoted to functions that are transparent to the driver, the number of driver-selectable features and options has increased tremendously. For example, automobiles may include driver controls for seating position, seat temperature, cabin temperature, cabin ventilation, cabin illumination, dash illumination, audio entertainment, navigation, suspension compliance and transmission shift-mode, to name only a few. Providing driver control of all of these functions has led to a proliferation of knobs, buttons, switches and other controls in many automobiles.

The increased number of driver controls is not without its drawbacks. Typically, drivers must refer to increasingly voluminous owner's manuals to understand the various controls available and learn how to operate them. Naturally, different drivers have different preferences and this can result in a lengthy process of changing settings each time a different driver enters the vehicle. Furthermore, the increased complexity of driver controls is a distraction to the driver and negatively affects traffic safety.

Efforts have been made to simplify the driver/vehicle interface. One such effort is the "iDrive" system introduced by BMW. This system employs a video display and a 55 driver-operated "joystick" to replace many of the individual controls. The system is reported to control more than seven hundred functions. While the system succeeds in eliminating much of the dashboard clutter, it results in as much, if not more, driver distraction than with conventional controls.

Another effort to simplify the driver/vehicle interface (and one that is employed in conjunction with BMW's "iDrive" system) is voice recognition. The vehicle is programmed to learn and respond to certain spoken commands. However, voice recognition technology is still in its infancy and 65 spoken commands are not consistently understood, especially in a typically noisy vehicle environment.

2

There remains a need for a system and method of interfacing with the myriad of controllable features in a modern automobile without distracting the driver when actually operating the automobile.

SUMMARY OF THE INVENTION

The present invention provides methods and apparatus for setting preferences and other parameters of a motor vehicle.

In certain embodiments of the invention, a user initiates a connection to an interactive site on a global computer network. The site hosts a graphical user interface with which preferences and other parameters of a motor vehicle may be set by the user. In some embodiments, set-up data for the motor vehicle may be transferred directly to the motor vehicle from the interactive site. In other embodiments, set-up data for the motor vehicle are transferred from the user's computer to a transfer device where it is temporarily stored. The transfer device, which may comprise a key for operating the motor vehicle, is then used to program the features of the motor vehicle.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 is a functional block diagram of an embodiment of the invention wherein a motor vehicle receives data from a local computer via a transfer device.

FIG. 2 is a functional block diagram of another embodiment of the invention wherein a motor vehicle receives data directly from an interactive site server.

FIG. 3 illustrates a graphical user interface for setting programmable features of a vehicle entertainment system.

FIG. 4 illustrates a graphical user interface for setting programmable features of a vehicle climate control system.

FIG. 5 illustrates a graphical user interface for customizing a vehicle control/display panel.

DETAILED DESCRIPTION OF THE INVENTION

In the following description, for purposes of explanation and not limitation, specific details are set forth in order to provide a thorough understanding of the present invention. However, it will be apparent to one skilled in the art that the present invention may be practiced in other embodiments that depart from these specific details. In other instances, detailed descriptions of well-known methods and devices are omitted so as to not obscure the description of the present invention with unnecessary detail.

A first embodiment of the invention is illustrated in FIG. 1. A motor vehicle receives set-up data from a local computer 12 via a transfer device 16. In a typical application, local computer 12 is a general purpose personal computer of the type now widely found in homes and offices. Details of computer 12 are not particularly relevant to the invention and are not shown. Typically, computer 12 will comprise, at a minimum, a processing unit, a keyboard and a display. Additional input devices, such as a mouse or other pointing device, and output devices, such as a printer, may also be included as part of computer 12.

Local computer 12 is coupled to a remote interactive site server 14 by a telecommunications link. In a typical embodiment of the invention, interactive site server 14 would be accessible via the World Wide Web. Other appropriate means for connecting computer 12 to server 14 could also be employed. Server 14 contains programming for interactively setting the programmable features of motor vehicle 10.

Preferably, server 14 presents to the owner of motor vehicle 10, via computer 12, a graphical user interface that is tailored to motor vehicle 10 and the programmable features thereof.

Transfer device 16 receives the programming data from 5 local computer 12 by a wired or wireless connection to computer 12. A wired connection may comprise a serial bus configured in accordance with any of the appropriate industry standards, such as, for example, universal serial bus (USB), "FireWire", etc. Wireless connections may comprise 10 optical, audio, magnetic, inductive, infrared or radio frequency coupling. One wireless communication protocol suitable for use with the present invention is the "Bluetooth" protocol, which is now becoming widely installed in home computer systems. Another wireless communication proto- 15 col that may be employed with the present invention for transferring data from local computer 12 to transfer device 16 is the video data transfer protocol described in copending application Ser. No. 10/155,531 and its predecessor applications. Transfer device 16 also communicates with 20 motor vehicle 10 by means of a wired or wireless connection with a suitable protocol, such as any of those mentioned

Communications between local computer 12 and transfer 10 may be either one-way (namely, from the home computer to the transfer device and then to the vehicle) or two-way. However, significant advantages are realized when utilizing two-way communication. Two-way communication allows "synchronization" of the motor vehicle with a "virtual" 30 motor vehicle maintained at the site server 14. Many of the features and settings of the motor vehicle can be controlled directly by the driver while in the motor vehicle. By periodically returning transfer device 16 to computer 12 and reestablishing a connection with server 14, the virtual motor 35 vehicle can be updated with any changes in the settings of the real motor vehicle.

Another advantage of two-way communications is that it may be used to facilitate remote troubleshooting of the motor vehicle. Data from the motor vehicle may be trans- 40 ferred to computer 12, and from there to the motor vehicle manufacturer, dealer or other support facility via an Internet or email connection. Analysis of the data can then be used to issue appropriate repair orders. In some cases, repairs may be effectuated by downloading corrective software or firm- 45 ware in the same manner that feature set-up is accomplished.

As illustrated in FIG. 1, transfer device 16 may be configured as a device with a USB or other serial bus connection 17 and an internal flash memory or other suitable non-volatile memory device. Such a transfer device is easily 50 portable and may be conveniently carried on a key chain. Transfer device 16 may be simply plugged into a cooperating serial port on local computer 12. In this regard, most home computers are now equipped with easily accessible USB ports. Motor vehicle 10 may also have a cooperating 55 serial port on the dash or console. Operation of motor vehicle 10 may be enabled with a conventional key. Alternatively, however, transfer device 16 may itself function as a key to enable operation of the motor vehicle. In either case, it is preferred that each driver of the motor vehicle have his 60 or her own transfer device so that the vehicle will be automatically configured to that driver's preferences whenever the driver inserts the transfer device into the receiving port.

Transfer device 16 may be configured in numerous other 65 ways. For example, a recordable compact disk (CD) or digital video disk (DVD) could be employed as a transfer

device. In this case, set-up data would be written onto the CD or DVD at local computer 12 and the disk would then be loaded into a suitable drive in the motor vehicle. Such an approach is more suitable for one-way communication than two-way communication.

It is also possible to configure a system in which motor vehicle 10 receives set-up data directly from local computer 12 without a transfer device. This can be accomplished by establishing a telephonic connection with the motor vehicle. In this regard, motor vehicles are increasingly being equipped with built-in telecommunications capabilities for implementing a variety of so called "telematic" functions. The communication path might also involve a combination of wired and wireless protocols. For example, local computer 12 may have a wireless link to an in-home transceiver, which is connected to a remote transceiver in the motor vehicle's garage or other parking area by a wired connection. The wired connection may comprise a data communication bus or a communication signal may be carried as a modulation on the household wiring. The garage transceiver then communicates with the motor vehicle using a wireless protocol.

FIG. 2 illustrates an alternative embodiment of the invendevice 16 and between the transfer device and motor vehicle 25 tion. In this case, set-up data for motor vehicle 10 is received directly from server 14 rather than through local computer 12. From the motor vehicle owner's perspective, the preference setting interface is otherwise identical to the previously described embodiments. Site server 14 may establish a direct telephonic or other suitable communication connection with motor vehicle 10.

> The graphical user interface with which a user sets the functions and preferences of the motor vehicle may be highly sophisticated. The options that may be provided are virtually limitless. The following lists some of the functions that could be implemented using the present invention. Many of these allow a driver to personalize his or her car much as cell phones are personalized with distinctive cases, ring tones, greeting messages, etc.

Interior

Entertainment

Driver enters ZIP code and finds all local radio stations. Driver may select by station frequency, ID, genre (jazz, pop, talk, etc.), or signal strength, and assign to presets on dash or on touch display.

Optionally, set up to scan among chosen stations until the one desired is tuned. Say "OK" and the radio will stay on the currently tuned station. Choose the scan delay time (3 sec, 5 sec, etc.)

Select option to seek out the same genre of station driver was listening to in a new area whenever signal strength falls below a preset level.

Specify favorite stations and/or programs and the audio system will switch at the designated day/time, e.g., on weekdays: NPR in the morning until 9:00, classical radio station until 2:00, sports station until 5:00, news, weather, and traffic until 6:30. Choose different schedule line-up for weekends.

If not in the car when favorite radio program starts, have the system record it (time-shift radio). Play back with the ability to pause, rewind, FF, skip, preserve segments, etc.

15

20

35

55

CD Changer

Driver places CDs for use in car into CD drive of home computer. Application program reads the CDs and creates a play list that is transferred to car.

Specify favorite songs to play in a desired order or at 5 random.

Play sources at random alternating or predetermined way with preferred radio stations and/or programs and/or MP3 tunes.

MP3 Tunes

Use transfer device to move MP3 files to the car.

Create play list as above.

All audio sources can be programmed to play in an almost infinite way based on time, day of the week or programmed "function button."

Sound & Source Management

Mix and match radio, CDs, MP3s by time of day, randomly, etc.

Set audio level for radio, CD and/or MP3 player to be used when car is started.

Set a "default" source.

Select whether play continues with the same source at the same volume when car is started in the morning, or switches to a different predetermined source at a different volume (e.g., system automatically defaults to 25 AM traffic source if it's between 7:00 and 8:00 AM). Optimize sound for driver or for cabin.

Set equalization manually or for a specific genre of music—i.e., whenever radio is on jazz station, system

defaults to driver's "jazz" EQ.

RESET to factory defaults. Reminders

Driver may type in any manner of reminders or notes to be read back by voice synthesis at the push of a button at any set time or interval.

Reminders can be played back in the car or from the home computer.

Climate Control

Filter

Automatic or manual

Recirculate air, or don't, or mix in a selectable ratio.

Set preferred default setting for fan speed using slider from MIN to MAX. On MIN setting fan blows gently 45 Mobile Phone even if a large cabin-temperature change is required. On MAX setting fan blows at full speed until desired cabin temp is achieved. Slider allows for any speed in between.

Comfort Index

Select relative weights of IR sensor, outside and inside temps to optimize comfort for the driver (it can be cool outside but the IR detector sees lots of IR, so it thinks it's summer and the air conditioner comes on). Include humidity in the relative comfort index as below.

Timed Temperature Preset

High and low temperature thresholds can be set and the car can automatically bring cabin temperature to within a selected comfort level at a designated time of day. For example, the system may be programmed to start 5 60 minutes before a regularly scheduled departure time. As a safety precaution, the system may automatically shut down after running ten minutes without user intervention.

Seat Warmer

Program the seat warmer to activate at a designated time of day or as soon as car is unlocked.

Program a button on the dash to turn on the seat warmer for five minutes every 30 minutes after the car is shut

Circuit monitors battery current and shuts down seat warmers when appropriate.

Temperature

Individual user preferences are easily set up and transferred using multiple transfer devices (keys/fobs).

Select "Alfresco" mode and system automatically boosts A/C or heating output as needed when convertible top is lowered.

Different settings for the front passenger seat can be selected depending on whether or not the seat is occu-

Humidity

Select desired relative humidity with slider control or RESET to factory defaults.

Navigation

Address Entry

Enter addresses using computer keyboard or by dragging and dropping from Web site or address book.

While driving, a designated cockpit button can be pressed to store the current location, which can then be uploaded to the home computer and Web site.

Address Library

Enter or select a new or saved address on the home computer; elect to have this loaded as the destination address when car starts.

Trip Planning

Book hotel rooms (through third-party Web site) by clicking on a map for the final destination and on intermediate stops if appropriate.

Select points of interest within a selected range along the route.

Purchase tickets or passes or make reservations for events or movies or restaurants.

Receive notification when its getting close to time to refill the tank at an upcoming preferred gas station(s).

Route Planning

Select addresses from address library and obtain most efficient route plan given the time of day, distances and known traffic conditions.

Phone Book

Selected numbers (and addresses) from computer phone book are available to the phone (and Navigation) system.

Voice Dialing

Activate voice dialing on selected phone numbers from phone book.

Phone Voice Commands

Select key words that will activate voice-dialing functions (call, end, mute, switch).

Personalization

Horn Effects

Select synthesized horn sounds from a list.

Select horn response mode, e.g., pushing the horn switch and holding it in sounds the warning horn sound as normal; one quick tap sounds a different horn sound ("friendly" light-is-green horn); two quick taps sounds a brief personalized "tune", e.g., driver's signature "I'm home" tune.

Interior Lighting Effects

Select the color and intensity of dial/dash backlighting.

Selected preferred cabin "atmosphere" when door is opened (dim cabin lighting, full-on bright, others).

Link lights to doors, e.g., opening only driver's door turns on only left-front map light; when rear doors are opened rear lights also activate.

Sound Effects

Select the sound the turn indicator makes.

Select a sound if the gas cap is not on or seated.

Select a sound when motorized seats are being adjusted.

Personalized seat-belt warning.

Select an alert sound when driving above a preset speed. Select keys-in-ignition reminder tone.

Visual Effects

Add a photo or image to the LCD.

Screensaver for LCD when vehicle is in Park.

Voice Commands

Select any number of short voice commands to accomplish listed specific in-cabin tasks: "Open sunroof.", Open my window.", "High beams.", etc.

In-Vehicle Interface

Systems & Controls

Customize the function of "function buttons" to control selected functions of any system in the car.

In cars with touch screen LCDs, select from among the 25 components of the systems to be displayed and/or controlled from the LCD.

Buttons

Program any button in the cabin to do just about anything.

Vehicle

Safety

Window & Sunroof Control

Set each window so the occupant of the adjoining seat can only lower the window to a selected level.

Lock window controls at selected seats.

Set a button in the cockpit to lower a preset amount/close all or selected windows and open/close the sunroof.

Set the sunroof to partially open when the inside temperature exceeds a predetermined temperature. Also have the fan come on at the desired speed for selectable intervals.

Seatbelts

Disable engine start if all or selected seats with passengers don't have seat belts fastened.

Speed Governor

Sound a selected warning sound when the car exceeds a specified speed.

Make the warning louder the higher above the preset speed the car goes

Limit the maximum speed of the car.

Limit the maximum rate of acceleration.

Vehicle Tracking

Using GPS or mobile phone, create a log of where the car has been, when and for how long. Also track how hard the car was driven.

Set up real-time tracking of the vehicle

Accident

Set some or all of interior lights to flash and the horn to sound.

Enable transmission of GPS coordinates.

Security

Door Locks

Determine if and at what speed all or selected doors lock.

Set certain doors to unlock only after one or both of the front doors have been opened for a selected period of time.

Enable "lock doors" voice command.

Window Control

(see Safety above)

Enable voice command for "windows up."

Panic Alert

Function button or voice command that locks all doors, rolls up windows, flashes lights, sounds an emergency "siren".

Enable "panic button" to call one or more predetermined phone numbers and deliver and repeat a voice synthesized message when the call is answered.

Add vehicle location to the message.

Door Access

Disable opening one or more doors from the outside unless one or more specific doors are opened from the inside.

20 Lighting

Select how long and which of the external and internal lights go on after unlock, all doors closed, engine start, vehicle speed.

Alarms

Program security codes.

Select functions for key-fob panic button (e.g., flash lights, activate "I need help!" synthesized-voice horn).

Performance

30 Suspension Control

Adjust the ride of computerized suspension from sport to luxury or anywhere in between.

Engine Control

Select within a range between economy and performance Transmission Control

Within factory-set ranges, determine shift aggressiveness (e.g., allow max-rpm shifts or always shift as early as possible for best economy).

Steering

Adjust the feel of steering from stiffer to lighter using an infinitely variable slider.

Winter

Click box to optimize car for poor-weather (e.g., transmission starts in second gear, max traction control intervention, ABS fires at minimum lock detection, etc.).

Tuning

55

Sport Mode

Set up one-button high-performance profile (e.g., low-economy, max power, max transmission aggressiveness, stiffest shocks).

Turbo Boost

Within factory range, adjust turbo pressure to favor economy, sport mode or point in between.

Handling

Select spring/shock rates, select steering ratio, select traction control response, etc.

60 Emergency Information

Contacts

In case of emergency or accident, list numbers to contact to speak to hands-free or with a pre-entered voice synthesized call.

In event of airbag deployment, selected contact name and number to flash on I.CD to assist rescue personnel in case of driver incapacitation. Other Notifications

Transmit vital information to insurance company.

Emergency Aid

One button summons list and numbers for nearest hospitals, police, fire, pharmacy, etc. based on GPS location—plus preset list of needed phone numbers (friends, family doctor, school, etc).

Information & Service

Trip Logs

Daily Mileage Logs

Record and display distances traveled.

Record routes traveled.

Record and display fuel consumed.

Calculate a "cost per mile" of operation, including tire wear, gas mileage, lease and insurance cost, etc.

Selectively clear various logs.

Set additional or alternative criteria for "measuring" various parameters of daily use.

Trip Mileage Logs

On trips of a preset duration in hours, days, miles or upon pushing a "start trip" function button, record distances between stops, total trip mileage, average speed gas mileage for the entire trip or trip segments, etc.

Cumulative Data
Record all possible or selected data from a master reset
done at the dealer upon delivery of the car.

Guest Logs

Record trip information (route points, speeds, time) from selected start to stop points.

Service & Diagnostics

Last Service

At what mileage.

On what day and time.

At what dealer.

At what cost.

What was done.

Next Service

Anticipated date based on how the car is being driven, etc. What will be serviced at the next service.

What bugs in the car need to be fixed.

What will it cost.

How much time should it take.

Request email within predetermined period before the service should be done as a reminder.

Request phone contact from nearest or selected dealer to set an appointment.

Request dealer assistance in getting the car to service and 50 back.

Diagnostics

Send diagnostic codes to manufacturer and dealer.

Receive software and firmware-based fixes.

Firmware & Software Updates

Receive periodic updates to operating systems, that enable new functionality.

Interactive User's Manual

Virtual Test Drive

Animate various controls on the home computer screen.

Learn & Setup

Interactively learn the various options and settings available in the car.

Automatic Tutor

Based on data collected from vehicle, user is prompted to learn about controls/systems that have not yet been set

(e.g., "You have not yet set up your Address Book. Would you like assistance?").

Weather and Driving Conditions

Forecast

Obtain weather forecast for travel area.

Road Conditions

Obtain reports of road conditions, accidents, clogged traffic, roadwork being conducted, etc.

Safety Kit

Obtain list of suggested bring-along items based on weather forecast and planned travel route (snow chains, ice scraper, sunscreen, full tank-few filling stations on the way, etc).

Contact Vehicle Manufacturer

FAO

Access a searchable database of FAQs

Helr

Access a searchable "help" database.

Email the service center with specific questions and issues.

Vehicle-specific Information

Send vehicle data to manufacturer. Receive feedback and/or contact information after data has been received and analyzed.

Nearest Dealerships

Access list with maps of closest dealers, etc.

Customer Relations

Subscribe to newsletter.

Subscribe to other periodic news about vehicle and/or related interests.

Request notification about new model introductions.

Elect to receive periodic questionnaires relating to satisfaction, etc.

Request results of surveys about quality, customer satisfaction, etc.

Request notification about special offers and events.

Shor

Driving Accessories

Order custom car mats, spill-proof coffee mugs, first-aid kits, CD carriers, scat covers, car covers, etc.

Logo Wear

Order jackets, shirts, luggage, gloves, sunglasses, hats, golf bags, etc.

Performance Accessories

Order optional wheels, gold-trim kits, trailer hitches, aero body kits, roof racks, bicycle carriers, audio/visual equipment, etc.

Events

Order tickets to manufacturer-sponsored races, motor shows, sporting events, social gatherings, etc.

FIG. 3 illustrates a portion of a graphical user interface that may be employed with the present invention to set programmable features of a motor vehicle's entertainment system. The interface utilizes pull-down menus, data entry windows, buttons, sliders, etc., which are readily implemented by persons proficient in website design. The programmable features shown in FIG. 3 are merely illustrative of those that can be implemented. The particular features that are made available on the graphical user interface would be specified by the motor vehicle manufacturer and would be constrained by the hardware and software specifications of the particular vehicle.

FIG. 4 illustrates a portion of a graphical user interface that may be employed with the present invention to set programmable features of a motor vehicle's climate control system.

Use of the present invention facilitates customized driver 5 controls and displays. For example, touch screen LCD or similar display panels are now used in many automobiles. Using a graphical user interface, a driver can design a customized set of controls for operating features of interest to that driver. One driver may wish to have certain radio 10 selections readily available, whereas another driver may wish to have available a selection of destinations for the navigation system. These preferences are communicated via the transfer device as described above. Controls that are customized in this manner are not limited to touch screen 15 selections. By the same process, driver defined functions may be assigned to buttons, dials and other mechanical controls as well to create individualized "function keys." Likewise, displays available to the driver may also be customized.

FIG. 5 illustrates a portion of a graphical user interface for creating a customized control/display panel. The top portion of the interface provides a menu of controls and displays that may be dragged and dropped onto a graphic representation of the vehicle's control display panel in the bottom portion 25 of the interface. In this manner, a user may construct a hierarchy of control/display panels for various systems of the vehicle and/or driving situations. A "home" panel may be configured with controls and displays that are most used by the driver. Subsidiary panels, accessible from the "home" 30 panel, may be created in whatever configurations the driver desires. Selections available to the driver when creating customized panels may include background colors and/or patterns. The panel may be programmed with "wallpaper" and "screensavers", much as computer displays are custom- 35 ized by their users.

It will be recognized that the above-described invention may be embodied in other specific forms without departing from the spirit or essential characteristics of the disclosure. Thus, it is understood that the invention is not to be limited 40 by the foregoing illustrative details, but rather is to be defined by the appended claims.

What is claimed is:

 A method of controlling an automobile sound system comprising:

providing a server on a global computer network with a graphical user interface tailored to an automobile sound system and the programmable features thereof;

accessing the server with a user's computer and operating the graphical user interface to program a selected 50 automobile sound system function; transferring data representative of the selected automobile sound system function to an automobile sound system remote from the user's computer.

- 2. The method of claim 1 wherein transferring data representative of the selected automobile sound system function comprises transferring the data to a transfer device and then transferring the data from the transfer device to the automobile sound system.
- 3. The method of claim 1 wherein transferring data representative of the selected automobile sound system function comprises transferring the data from the server to the automobile sound system.
- 4. The method of claim 3 wherein the data is transferred from the server to the automobile sound system via telephonic communications.
- 5. The method of claim 1 wherein transferring data representative of the selected automobile sound system function comprises transferring the data from the user's computer directly to the automobile sound system.
- 6. A method of controlling an automobile heating, ventilating and air conditioning (HVAC) system comprising:
 - providing a server on a global computer network with a graphical user interface tailored to an automobile HVAC system and the programmable features thereof;
 - accessing the server with a user's computer and operating the graphical user interface to program a selected automobile HVAC system function;
 - transferring data representative of the selected automobile HVAC system function to an automobile HVAC system remote from the user's computer.
- 7. The method of claim 6 wherein transferring data representative of the selected automobile HVAC system function comprises transferring the data to a transfer device and then transferring the data from the transfer device to the automobile HVAC system.
- 8. The method of claim 6 wherein transferring data representative of the selected automobile HVAC system function comprises transferring the data from the server to the automobile HVAC system.
- 9. The method of claim 8 wherein the data is transferred from the server to the automobile HVAC system via telephonic communications.
- 10. The method of claim 6 wherein transferring data representative of the selected automobile HVAC system function comprises transferring the data from the user's computer directly to the automobile HVAC system.

VIA E-MAIL AND FEDEX

Jonathan Butler Associate General Counsel Tesla 3500 Deer Creek Road Palo Alto, CA 94304

RE: pointSET Patent Portfolio

Dear Mr. Butler:

We represent pointSET Corporation, which owns 6 issued patents and 3 pending applications that are generally directed to the field of remotely programming appliances (including automobiles) using a computer or smartphone. The inventions were developed by pointSET founder Jerry Iggulden, the named inventor on more than 40 U.S. patents and more than 100 world-wide.

Since last year, there have been a number of developments with respect to the pointSET patent portfolio. First, the Federal Circuit issued a decision in Akamai Tech. v. Limelight Networks (Fed. Cir. 2012). In the Akamai opinion, the Federal Circuit expressly overruled its previous Paymentech opinion and held "that all the steps of a claimed method must be performed in order to find induced infringement, but that it is not necessary to prove that all the steps were committed by a single entity." Under Akamai, a party may be liable for inducing infringement where the accused infringer: (1) knew of patent; (2) induced performance of the steps of the method; and (3) those steps were actually performed. Many of pointSET's issued patent claims arguably involved "divided infringement," which may not have been actionable under Paymentech, but are under Akamai. In light of the decision, we have prepared the enclosed claim chart demonstrating how Tesla induces infringement of claim 6 of United States Patent No. 7,379,541. The '541 patent is specifically directed to the automotive sector and control of an automobile's HVAC system using a remote Internet site.

Second, the world's largest automotive company, **Toyota Motor Corporation** has recently entered into a settlement agreement regarding certain rights to the pointSET's portfolio. The Toyota agreement demonstrates the importance of the inventions to companies offering the ability to program features of an automobile remotely using a smartphone or computer.

Third, one of the inventors of the pointSET patents (and the President of the company), Jerry Iggulden has passed away. Jerry was the main day-to-day driving force at pointSET, and his passing has forced others at the company to assume Jerry's responsibilities. This has resulted in a fresh approach to the monetization of pointSET's assets and a mandate to us, as representatives of the company, to explore licensing on an accelerated timetable.

Previously, pointSET was seeking an upfront payment and a per-unit running royalty. pointSET reserves the right to return to such licensing, but for a limited time pointSET is offering a one-time, fully-paid licensing flat fee of \$500,000 for a non-exclusive, company-wide right use pointSET's technology. This one-time fee will cover both past and future use of the technology through the expiration of the pointSET patent portfolio.

As mentioned above, pointSET's new management is interested in completing license agreements as rapidly as possible. For a limited time, therefore, the company is offering significant discounts for those companies that agree to enter a license with pointSET promptly, as follows:

License Entered & Payment Made	License Fee
Within 60 days of this letter	\$150,000
After 60 but less than 90 days this letter	\$300,000
More than 90 days after this letter	\$500,000

pointSET is adhering to the listed time frames, so please contact me via phone or email listed below at your earliest convenience should you wish to license the technology claimed by the portfolio.

If Tesla would prefer not to pay for the use of the pointSET technology, we are offering the opportunity to discontinue Tesla's use of the technology within sixty days of the date of this letter. Should Tesla remove the claimed technology within sixty days, we will not seek damages for Tesla's past use of the technology. If you would prefer this option, please notify me within the next sixty days that you have removed the technology claimed in the portfolio, including effective date of removal.

Very truly yours,

Nicholas Dudziak

Enclosures

Notice

pointSET Corporation reserves all rights with regard to its patents, including: (1) the right to seek damages going back as far as the last six years, assuming your company started to make or use pointSET's patented technology before that time; (2) the right to change its royalty rates at any time; (3) the right to change this licensing program at any time without notice, including variance to conform to applicable laws; and (4) the right to seek damages higher than the rates set forth in this letter based on your license agreements. You should not rely on any communication or lack of communication from Global IP Law Group or pointSET as a relinquishment of any of pointSET's rights. This letter is being sent pursuant to Rule 408, Federal Rules of Evidence.

Install the app and let the fun begin! Source: http://wwww.teslamotors.com/blog/inside-tesla-020513	
Analysis	The Tesla Model S beta application is granted "full network access" and uses the Internet "to interact with [the] Model S" (i.e., transfer data) from the user's Internet enabled smartphone to the vehicle.	For example, a Tesla Model S car owner's phone will "interact with [the] Model S" (i.e., transfer data from their smartphone to the server to their Tesla Model S car) and remotely control their vehicle through the Tesla Model S beta app, which transfers HVAC function data (turn the climate control on or off) from their smartphone to the cars HVAC system.	
Claim 6	transferring data representative of the selected automobile HVAC system function to an automobile HVAC system remote from the user's computer.
