### **JURISDICTION**

3. This is an action for patent infringement arising under the patent laws of the United States, 35 U.S.C. §§ 1, *et seq.* This Court has jurisdiction over this action pursuant to 28 U.S.C. §§ 1331 and 1338(a).

4. This Court has personal jurisdiction over Defendant. Defendant regularly conducts business and has committed acts of patent infringement and/or has induced acts of patent infringement by others in this Judicial District and/or has contributed to patent infringement by others in this Judicial District, the State of Texas, and elsewhere in the United States. For example, Defendant has placed and continues to place infringing products into the stream of commerce via an established distribution channel with the knowledge and/or understanding that such products are being and will continue to be sold in this Judicial District and the State of Texas.

5. Venue is proper in this Judicial District pursuant to 28 U.S.C. § 1391 because, among other things, Defendant is subject to personal jurisdiction in this Judicial District, has purposely transacted business involving the accused products in this Judicial District, including sales to one or more customers in Texas, and certain of the acts complained of herein occurred in this judicial district.

6. Defendant is subject to this Court's jurisdiction pursuant to due process and/or the Texas Long Arm Statute due at least to its substantial business in this State and Judicial District, including: (a) at least part of its past infringing activities, (b) regularly doing or soliciting

business in Texas, and/or (c) engaging in persistent conduct and/or deriving substantial revenue from goods and services provided to customers in Texas.

**PATENTS-IN-SUIT**

7. On August 29, 2006, the United States Patent and Trademark Office duly and legally issued U.S. Patent No. 7,100,061 (the “’061 Patent”) entitled “Adaptive Power Control.” A true and correct copy of the ’061 Patent is attached hereto as Exhibit A.

8. On September 29, 2009, the United States Patent and Trademark Office duly and legally issued U.S. Patent No. 7,596,708 (the “’708 Patent”) entitled “Adaptive Power Control Integration System.” A true and correct copy of the ’708 Patent is attached hereto as Exhibit B.

9. On October 22, 2013, the United States Patent and Trademark Office duly and legally issued U.S. Patent No. 8,566,627 (the “’627 Patent”) entitled “Adaptive Power Control.” A true and correct copy of the ’627 Patent is attached hereto as Exhibit C.

10. On August 12, 2014, the United States Patent and Trademark Office duly and legally issued U.S. Patent No. 8,806,247 (the “’247 Patent”) entitled “Adaptive Power Control.” A true and correct copy of the ’247 Patent is attached hereto as Exhibit D.

11. Semcon is the sole and exclusive owner of all right, title and interest in the ’061 Patent, ’708 Patent, ’627 Patent and ’247 Patent (collectively, the “Patents-in-Suit”), and holds the exclusive right to take all actions necessary to enforce its rights to the Patents-in-Suit, including the filing of this patent infringement lawsuit. Semcon also has the right to recover all damages for past, present, and future infringement of the Patents-in-Suit and to seek injunctive relief as appropriate under the law.

12. Semcon has at all times complied with the marking provisions of 35 U.S.C. § 287 with respect to the Patents-in-Suit. On information and belief, prior assignees and licensees have also complied with the marking provisions of 35 U.S.C. § 287.

### **FACTUAL ALLEGATIONS**

13. The Patents-in-Suit generally cover methods and apparatuses for controlling the power used by a computer; and specifically, the adjustment of the clock frequency and voltage supply to a processor and other components to conserve processor power and extend battery life. The claims of the Patents-in-Suit generally call for the frequency generator and power management logic to be located on the processor itself, rather than in a separate component that would consume power.

14. Non-party Qualcomm Inc. (“Qualcomm”) sells Snapdragon System-on-a-Chips (“SoCs”) which can perform Dynamic Clock and Voltage Scaling (DCVS)<sup>1</sup>. According to Qualcomm, this “is a technique used to adjust the frequency and voltage of the power equation to deliver the needed performance at the ideal power level.”<sup>2</sup> Additionally, the “CPU cores of Snapdragon processors lie on separate voltage and frequency planes. This allows each CPU core to hit independent frequencies and voltages, delivering scalable performance and power levels.”<sup>3</sup>

15. Michael Kors has infringed and is continuing to infringe the Patents-in-Suit by making, using, selling, offering to sell, and/or importing, and by actively inducing others to make, use, sell, offer to sell and/or importing, products that utilize SoCs and associated software that performs DCVS or DVFS for power management, including Qualcomm Snapdragon SoCs including at least the Snapdragon Wear 2100 SoC. Such products include at least the Michael Kors Access Bradshaw and Access Dylan smartwatches.

<sup>1</sup> DCVS may alternately be referred to as Dynamic Frequency and Voltage Scaling (“DVFS”).
