Case No.: '19CV0001 CAB BLM

**COMPLAINT FOR:**

- (1) Breach Of Contract;
- (2) Promissory Estoppel;
- (3) Declaratory Judgment;
- (4) Antitrust Monopolization In Violation Of Section 2 Of The Sherman Act;
- (5) Declaratory Judgment of Non-Infringement of U.S. Patent No. 8,432,876; and
- (6) Declaratory Judgment of Non-Infringement of U.S. Patent No. 8,953,548.

**JURY TRIAL DEMANDED**

1 Plaintiffs u-blox AG, u-blox San Diego, Inc., and u-blox America, Inc.  
2 (collectively, “u-blox” or “Plaintiffs”), by and through the undersigned counsel, file  
3 this Complaint against InterDigital, Inc., InterDigital Communications, Inc.,  
4 InterDigital Technology Corporation, InterDigital Patent Holdings, Inc., InterDigital  
5 Holdings, Inc., and IPR Licensing, Inc. (collectively, “InterDigital” or  
6 “Defendants”) as follows.

7 **INTRODUCTION**

8 1. u-blox, a leading fabless semiconductor provider of embedded  
9 positioning and wireless communication products, brings this lawsuit against  
10 InterDigital because of InterDigital’s failure to license its alleged standard essential  
11 patents (“SEPs”) on fair, reasonable, and non-discriminatory (also known as  
12 “FRAND”) terms and conditions.

13 2. As explained herein, InterDigital has declared a number of its patents to  
14 be essential to the 2G, 3G, and/or 4G cellular technology standards established by  
15 the European Telecommunications Standards Institute (“ETSI”), a standard setting  
16 organization (“SSO”). In declaring its patents as essential to these standards,  
17 InterDigital made public and binding commitments to all potential implementers of  
18 the standards, including u-blox, to license its declared patents on FRAND terms.

19 3. Indeed, InterDigital is a member of ETSI and has submitted over thirty  
20 (30) ETSI IPR Declaration forms declaring a large number of its United States and  
21 foreign patents and patent applications as essential to the standards for the 2G, 3G,  
22 and 4G technologies. In so doing, InterDigital promised that it is “prepared to grant  
23 irrevocable licenses under . . . terms and conditions which are in accordance with  
24 Clause 6.1 of the ETSI IPR Policy.” Clause 6.1 of ETSI’s Intellectual Policy Rights  
25 (“IPR”) Policy states:

26 When an ESSENTIAL IPR relating to a particular STANDARD or  
27 TECHNICAL SPECIFICATION is brought to the attention of ETSI,  
28 the Director-General of ETSI shall immediately request the owner to  
give within three months an irrevocable undertaking in writing that it is

1 prepared to grant irrevocable licenses on fair, reasonable and non-  
2 discriminatory (“FRAND”) terms and conditions

3 4. In addition, as an “Individual Member” of the 3rd Generation  
4 Partnership Project (“3GPP”) InterDigital was “bound by the IPR policy” of ETSI,  
5 the Organizational Partner through which InterDigital participated in 3GPP.

6 5. InterDigital thus intentionally induced ETSI, 3GPP, their members and  
7 affiliates, and anyone implementing any of the standards, including u-blox, to rely  
8 on InterDigital’s representation that it had granted and/or would grant licenses on  
9 FRAND terms and conditions in developing, adopting, and implementing the 2G,  
10 3G, and 4G standards. These standards have been and are implemented worldwide,  
11 including in the United States and California, in a variety of wireless electronic  
12 devices.

13 6. Consistent with the intent of ETSI’s IPR Policy, u-blox and other  
14 implementers of the technology standards relied on InterDigital’s FRAND  
15 commitment and invested significant resources to develop products that practice the  
16 2G, 3G, and 4G standards.

17 7. u-blox has invested substantial resources in developing and marketing  
18 cellular modules that implement the 2G, 3G, and 4G standards worldwide, including  
19 in the United States and California, relying on the assurances of participating IPR  
20 holders — including InterDigital — that any patents identified pursuant to ETSI’s  
21 IPR Policy by such IPR holders would be licensed on FRAND terms, regardless of  
22 whether such IPR were, in fact, used in any particular implementation.

23 8. However, after intentionally locking in the industry, including  
24 implementers like u-blox, through the standard(s), InterDigital then breached its  
25 promises to ETSI, its members and affiliates, and implementers of the standard(s)  
26 such as u-blox, by refusing to agree to a patent license with a licensing rate that is  
27 consistent with Clause 6 of ETSI’s IPR Policy. Instead, InterDigital has demanded  
28 royalties that are discriminatory and far higher than FRAND rates.

1           9.       Thus, it has become clear that, now that the cellular standards have  
2 been approved incorporating InterDigital’s allegedly essential patented technology,  
3 and requiring all implementers of those portions of the standard to practice that  
4 technology and excluding alternative technologies, InterDigital’s promises to license  
5 its allegedly essential patents on FRAND terms and conditions were false.

6           10.      u-blox is a ready and willing licensee seeking a license to InterDigital’s  
7 alleged SEPs, but InterDigital’s royalty demands for a patent license plainly violate  
8 its FRAND commitments, including but not limited to:

- 9                   •       Demanding royalty rates that are far in excess of fair and  
10                           reasonable value of InterDigital’s SEPs;
- 11                   •       Discriminating against u-blox and violating ETSI guidelines by  
12                           demanding u-blox pay higher royalty rates than other  
13                           implementers, including free riders;

14  
15  
16  
17           11.      Absent InterDigital’s commitment to license on FRAND terms and  
18 conditions, u-blox would not have adopted and implemented the 2G, 3G, and 4G  
19 technologies. However, now that InterDigital has excluded alternative technologies  
20 as a result of its false promises to ETSI, InterDigital is attempting to exploit its  
21 market position to demand unreasonably high and discriminatory licensing terms  
22 from u-blox.

23           12.      In addition, in a blatant attempt to coerce u-blox to enter into a license  
24 that is not on FRAND terms, InterDigital has engaged in a course of conduct to

25  
26           13.      Specifically, in 2017, in a blatant attempt to force u-blox to pay  
27 excessive non-FRAND rates, InterDigital reached out to u-blox’s customers and  
28

1 downstream manufacturers, [REDACTED]  
2 [REDACTED]

3 14. InterDigital’s conduct was unnecessarily destructive and outrageous  
4 because InterDigital knew that: (i) u-blox’s customers and downstream  
5 manufacturers would never have to [REDACTED]  
6 [REDACTED] and (ii) u-blox was a ready and willing licensee once the  
7 parties could determine a FRAND rate.

8 15. InterDigital was also and is well aware of the fact that: (i) u-blox  
9 entered into relationships with its customers in reliance on InterDigital’s  
10 commitment to offer a license to its alleged technology on FRAND terms, and (ii) u-  
11 blox’s customers and their downstream manufacturers relied on u-blox to maintain a  
12 license with InterDigital to design and incorporate u-blox’s technology into their  
13 products.

14 16. Given the foregoing, there was no legitimate reason for InterDigital to  
15 reach out to u-blox’s customers or downstream manufacturers, other than to force u-  
16 blox to capitulate to InterDigital’s unfair demands.

17 17. Nonetheless, because InterDigital’s threats to u-blox’s customers and  
18 downstream manufacturers not only threatened to profoundly impact u-blox’s  
19 critical customer relationships, [REDACTED]  
20 [REDACTED]  
21 [REDACTED]

22 18. [REDACTED]  
23 [REDACTED] and u-blox is again willing to negotiate a FRAND license with InterDigital.

24 19. Unfortunately, however, InterDigital is refusing to negotiate in good  
25 faith with u-blox for a license on FRAND terms. Among other things, InterDigital  
26 appears intent to pressure u-blox into a license that is not FRAND by interfering  
27 with u-blox’s important customer relationships.

28

1 20. As a result of the foregoing, u-blox has no choice but to turn to the  
2 Court to establish the FRAND rate, and enjoin InterDigital from engaging in  
3 anticompetitive conduct, including, but not limited to, stopping InterDigital from  
4 wrongfully interfering with u-blox’s customers and downstream manufacturers.

## 5 THE PARTIES

### 6 **A. u-blox**

7 21. Plaintiff u-blox AG is a corporation organized and existing under the  
8 laws of Switzerland, having its principle place of business in Zürcherstrasse 68,  
9 8800 Thalwil, Switzerland.

10 22. Plaintiff u-blox San Diego, Inc. is a wholly-owned subsidiary of u-blox  
11 AG. u-blox San Diego, Inc. is a corporation organized and existing under the laws  
12 of Delaware, having its principle place of business at 12626 High Bluff Drive #200,  
13 San Diego, California 92130.

14 23. Plaintiff u-blox America, Inc. is a wholly-owned subsidiary of u-blox  
15 AG. u-blox America, Inc. is a corporation organized and existing under the laws of  
16 Delaware, having its principle place of business at 1902 Campus Commons Drive  
17 Suite 310, Reston, Virginia 20191.

18 24. u-blox is a leading developer of global positioning technology,  
19 including products and services based on Global Navigation Satellite Systems  
20 (GNSS), including GPS and GALILEO, for the automotive, mobile  
21 communications, and infrastructure markets. u-blox began offering wireless  
22 products and services in 2009.

23 25. In 2011, u-blox acquired Fusion Wireless, a San Diego, California  
24 based provider of CDMA wireless modules for consumer and machine-to-machine  
25 (M2M) applications in North America. As u-blox’s Chief Executive Officer  
26 explained at the time, “[t]he acquisition of Fusion Wireless immediately gives  
27 u-blox new, cutting-edge wireless module products plus access to the huge  
28 embedded CDMA market in North America for both consumer and M2M

1 applications. It also expands our wireless module technology roadmap to cover all  
2 popular standards used in the Americas based on a layout-consistent form factor.  
3 This will allow our customers to easily adapt their products to match geographical  
4 requirements as well as overcome network coverage limitations.”

5       26. Fusion Wireless has been integrated into u-blox as u-blox San Diego,  
6 Inc., and the combined company continues to develop and market wireless  
7 communications modules worldwide — including in California [REDACTED]  
8 [REDACTED] and throughout the United States. Today u-blox  
9 offers a wide range of high-quality, scalable cellular modules perfectly suited for  
10 vehicle, industrial, and M2M applications, and mass-market consumer products with  
11 demanding size, cost, and quality requirements.

12       27. u-blox delivers leading wireless technology to reliably locate and  
13 connect people and devices. u-blox is a leading developer of global positioning  
14 technology, including products and services based on Global Navigation Satellite  
15 Systems (GNSS), including GPS and GALILEO, for the automotive, mobile  
16 communications, and infrastructure markets. u-blox develops cellular modules  
17 incorporating a variety of different cellular technologies, including GSM/GPRS,  
18 UMTS/HSPA(+), NB-IoT, and LTE Categories M1, 1, 4, and 6.

19       28. u-blox’s wireless communications modules are capable of  
20 incorporating a wide variety of cellular technologies. Supported cellular  
21 technologies provide global geographic coverage and include 2G, 3G, and 4G  
22 standards. Even within the 4G standard, u-blox offers a wide range of products  
23 practicing different iterations of the 4G standard designed for vastly different tasks,  
24 including NB-IoT (LTE Cat NB1), LTE Cat M1, LTE Cat 1, LTE Cat 4, and LTE  
25 Cat 6. These different cellular technologies offer different levels of performance  
26 and cost benefits. For example, u-blox’s LTE Cat 1, LTE Cat M1, and NB-IoT  
27 modules are designed to support a wide range of IoT applications requiring medium  
28 to very low data rates. This includes a broad spectrum of applications covering

1 speeds high enough for voice and video streaming, as well as those that need  
2 optimized performance for ultra-low power consumption and extended in-building  
3 range. In contrast, u-blox’s high speed LTE Cat 4 and LTE Cat 6 modules meet the  
4 needs of applications requiring high data rates, such as for HD video transmission  
5 and infotainment solutions. u-blox sells standard compatible products in California  
6 and around the world.

7 **B. InterDigital**

8 29. Upon information and belief, defendant InterDigital, Inc. (“IDI”) is  
9 organized under the laws of Pennsylvania, with its principal place of business at 200  
10 Bellevue Parkway, Suite 300, Wilmington, DE 19809.

11 30. Upon information and belief, defendant InterDigital Communications,  
12 Inc. (“InterDigital Communications”) is a Delaware corporation, with its principal  
13 place of business at 781 Third Avenue, King of Prussia, Pennsylvania 19406.

14 31. Upon information and belief, defendant InterDigital Technology  
15 Corporation (“InterDigital Technology”) is a Delaware corporation, with its  
16 principal place of business at 300 Delaware Avenue, Suite 527, Wilmington, DE  
17 19801.

18 32. Upon information and belief, defendant InterDigital Patent Holdings,  
19 Inc. (“InterDigital Patent Holdings”) is a Delaware corporation, with its principal  
20 place of business at 200 Bellevue Parkway, Suite 300, Wilmington, DE 19809.

21 33. Upon information and belief, defendant InterDigital Holdings, Inc.  
22 (“InterDigital Holdings”) is a Delaware corporation, with its principal place of  
23 business at 200 Bellevue Parkway, Suite 300, Wilmington, DE 19809.

24 34. Upon information and belief, defendant IPR Licensing, Inc. (“IPR  
25 Licensing”) is a Delaware corporation, with its principal place of business at 3411  
26 Silverside Road, Wilmington, DE 19810.

27 35. Upon information and belief, InterDigital Communications,  
28 InterDigital Technology, InterDigital Holdings, InterDigital Patent Holdings, and

1 IPR Licensing are wholly-owned direct or indirect subsidiaries of IDI. IDI,  
2 InterDigital Communications, InterDigital Technology, InterDigital Holdings,  
3 InterDigital Patent Holdings, and IPR Licensing (collectively, “InterDigital”) act as  
4 a common, unified economic enterprise.

5 36. Upon information and belief, IDI has and does dictate and control the  
6 actions of InterDigital Communications, InterDigital Technology, InterDigital  
7 Holdings, InterDigital Patent Holdings, and IPR Licensing, as described herein.

8 37. Upon information and belief, InterDigital has offices and employees in  
9 California and/or regularly conducts business in California, including an office in  
10 this District at 9276 Scranton Rd #300, San Diego, CA 92121, which supports  
11 InterDigital’s patent licensing business.

12 38. Upon information and belief, InterDigital derives revenues primarily  
13 from patent licensing and aggressively seeks to monetize its intellectual property  
14 portfolio — which includes patents declared essential to the 2G, 3G, and 4G  
15 standards — by targeting companies like u-blox that sell standards compatible  
16 products in California and around the world.

17 39. Upon information and belief, InterDigital purports to own  
18 approximately 2,400 U.S. patents and 11,500 non-U.S. patents spanning multiple  
19 jurisdictions and telecommunication technologies. InterDigital claims that its  
20 patents “relate predominantly to digital wireless radiotelephony technology  
21 (including, without limitation, 3G, 4G and 5G technologies).”

22 **JURISDICTION AND VENUE**

23 40. u-blox brings this action for damages, declaratory relief, injunctive  
24 relief, costs of suit, and reasonable attorneys’ fees arising under, *inter alia*, the  
25 patent laws of the United States, 35 U.S.C. § 1 *et seq.*; Section 2 of the Sherman  
26 Antitrust Act, 15 U.S.C. § 2; and the Declaratory Judgment Act, 28 U.S.C. §§ 2201  
27 and 2202. Accordingly, this Court has jurisdiction to hear this case pursuant to 28  
28 U.S.C. § 1331 and Section 4 of the Clayton Act, 15 U.S.C. § 15.

1           41. This Court has subject matter jurisdiction over u-blox’s pendent state  
2 law claims pursuant to 28 U.S.C. § 1367, because u-blox’s state law claims arise  
3 from the same factual nucleus as its federal law claims.

4           42. This Court has personal jurisdiction over InterDigital based on the  
5 antitrust laws, and because InterDigital regularly transacts business in this judicial  
6 district, directed its wrongful conduct described herein at and caused harm to u-blox  
7 in California, including, but not limited to, by threatening to harm and/or harming u-  
8 blox’s relationships with customers in this State. InterDigital’s interference was  
9 purposefully directed to u-blox and its customers in California, and u-blox’s claims  
10 arise from InterDigital’s intentional conduct in this State. In addition, InterDigital’s  
11 negotiations and correspondence with u-blox in connection with the license  
12 negotiations described herein were with u-blox’s representative in California.

13           43. Venue is proper in this judicial district pursuant to 28 U.S.C.  
14 §§ 1391(c) and 15 U.S.C. § 22.

15                           **FACTUAL ALLEGATIONS**

16           44. As explained below, u-blox brings this action because of InterDigital’s  
17 breach of its commitments to ETSI, 3GPP, and their members and affiliates —  
18 including u-blox — to license patents it has asserted to be essential to cellular  
19 technologies known as second generation (“2G”), third generation (“3G”), and  
20 fourth generation (“4G”) technologies under FRAND terms and conditions.

21                           **Standard Setting Organizations and Intellectual Property Rules**

22           45. SSOs, such as ETSI, are voluntary membership organizations whose  
23 participants engage in the development of industry standards for the benefit of their  
24 members and affiliates, third parties implementing the standards, and consumers.

25           46. SSOs and the standards they promulgate play an important role in the  
26 technology market by allowing companies to agree on common technology  
27 standards so that compliant products implementing the standards will work together.  
28 Standards also lower costs by increasing product manufacturing volume and inter-

1 brand competition and by eliminating switching costs for consumers and/or  
2 manufacturers who want to switch from products, services, or components provided  
3 by one company to those provided by another company.

4 47. Compatibility standards are commonly adopted in industries in which  
5 complementary products or components, manufactured by different firms, must  
6 interoperate, interface, or communicate with each other. When many companies  
7 produce components that must interoperate in a complex system, the collaboration  
8 of industry participants is often the most efficient way to establish the requisite  
9 standards. This collaboration often takes place in the context of formal SSOs that  
10 promulgate standards and set participation rules for their members. The  
11 telecommunications industry has benefited from increased interoperability across  
12 devices and networks, and the 2G, 3G, and 4G cellular communications standards at  
13 issue are examples of compatibility standards.

14 48. While standards deliver economic benefits to innovators, firms that  
15 implement the standards, and consumers, standards can also potentially impose  
16 excessive and unfair costs on these same constituencies, some of which stem from  
17 opportunistic behavior by owners of patents that cover or are declared to cover  
18 various technologies necessary to practice a standard. As a result, SSOs have  
19 adopted IPR policies to reduce those costs. When adhered to, these IPR policies  
20 benefit all of the constituencies. Standard setting participants receive the  
21 opportunity to have their technology incorporated into the standard and to receive  
22 compensation for its use in a larger number of devices that operate using the  
23 standard. As the standard becomes more widely adopted and used, patent holders  
24 receive greater total compensation. SSO participants also enjoy benefits independent  
25 of potential royalty income, including recognition of leadership in the technology,  
26 increased demand for participants' products, advantage flowing from familiarity  
27 with the contributed technology potentially leading to shorter development lead  
28 times, and improved product compatibility.

1           49. Firms that implement the standard receive assurance that they will  
2 always have access to the SEPs and will not be exploited by patent holders or  
3 disadvantaged relative to other implementers if they invest in implementing the  
4 standard or developing innovative products that may operate with the standard.  
5 Likewise, consumers and businesses benefit from continued innovation, reduced  
6 costs, and other efficiencies from widespread interoperability and economies of  
7 scale and scope enabled by the standard.

8           50. By contrast, IPR policy breaches can chill standard-setting efforts, thus  
9 denying to standard setting participants, implementers, and consumers the many  
10 benefits of standard setting.

11           51. In addition, while there are many benefits to collaborative standard  
12 setting, collaborative standard-setting can also raise antitrust concerns, because, for  
13 example, collaborative standard-setting has the potential to empower any individual  
14 firm that has IPR over one or more technologies that are declared essential to the  
15 standard to block other firms from practicing the standard or to significantly raise  
16 their costs of doing so. Outside of the standard setting context, the extent to which a  
17 patent holder will be able to profit from an invention is limited by competition from  
18 alternative, non-infringing technologies or products. Thus, even though a patent  
19 gives its owner the right to exclude unauthorized users, it does not necessarily  
20 confer monopoly power because constraining, non-infringing alternatives may be  
21 available. However, incorporating patented technology into a standard artificially  
22 removes competition from those alternatives and provides the patent owner with  
23 incremental market power that can be exploited. This incremental market power is  
24 due to the elimination of alternatives once the patents are incorporated into the  
25 standard, not the inherent technical value of the patents (*i.e.*, the contribution of the  
26 patented technology relative to the alternatives — the *ex ante* value).

27           52. SEP owners gain the power to exclude or exploit because the process of  
28 standardization transforms what may have been only marginally valuable IP into

1 essential IP needed by all firms that intend to manufacture, use, or sell standard-  
2 based products. The U.S. Department of Justice and Federal Trade Commission  
3 have recognized the potential for SEP owners to abuse the power gained through  
4 standardization. The effect is that the competitive constraints on the SEP owner's  
5 licensing behavior are eliminated after standardization. This elimination of  
6 alternatives confers market power on SEP owners relative to the pre-standard  
7 situation wherein alternatives (including the option of not including the relevant  
8 functionality at all) are potentially available in the technology market(s) and can  
9 constrain anticompetitive licensing behavior of the SEP owner.

10 53. Once a standard is set, and especially as manufacturers invest in and  
11 begin manufacturing products that can use or operate with the standard, it can be  
12 infeasible to revise the standard in order to avoid a SEP. Revising a standard can be  
13 very costly to the industry implementing that standard because it may involve  
14 breaking the compatibility and interoperability that the standard provides. Thus,  
15 changing a standard to eliminate a SEP whose owner attempts to unfairly exercise  
16 undue market power gained from standardization is generally not feasible. In sum,  
17 once an industry has adopted a particular standard, there are no alternative  
18 technologies that can implement a given functionality within the wording of the  
19 standard. The *ex post* relaxation of competitive constraints on the SEP owner  
20 through the elimination of alternatives, together with the *ex post* negotiation of  
21 licenses, gives rise to the possibility that a SEP owner will act opportunistically and  
22 "hold up" some or all standard implementers by extracting higher royalties *ex post*  
23 than it could have bargained for *ex ante*.

24 54. To prevent the exploitation of the SEP owner's market power in this  
25 situation, there must be other constraints on the SEP owner's licensing behavior,  
26 such as obligations to license on FRAND terms. To this end, SSOs typically impose  
27 IPR rules on their participants to protect against (or minimize the likelihood of)  
28 opportunistic, anticompetitive behavior by owners of standard-essential IP. Such

1 opportunistic behaviors expropriate at least a portion of an implementer's returns  
2 from sunk investments in innovation. If an implementer or potential implementer  
3 anticipates that there is a material risk of opportunistic behavior, its incentives to  
4 engage in innovative activities will be reduced or possibly even eliminated,  
5 particularly when the opportunistic SEP holder seeks to hold up the implementer for  
6 all or a large part of the profits from the implementer's innovations, complementary  
7 products, or services. By protecting against opportunistic behavior, SSO rules  
8 pertaining to IPR are intended to provide an environment that promotes investment,  
9 innovation, and technological progress. These IPR rules typically call for SSO  
10 participants to identify through declaration any potential SEPs covering the  
11 proposed standard and agree to license all implementers of the standard on fair,  
12 reasonable, and non-discriminatory terms.

#### 13 **ETSI's IPR Policy**

14 55. ETSI is an independent, non-profit SSO that is responsible for the  
15 standardization of information and communication technologies, including mobile  
16 cellular technologies, for the benefit of its members and affiliates.

17 56. 3GPP is a collaborative activity through a group of recognized SSOs in  
18 the information and communication industry, including ETSI.

19 57. ETSI, in partnership with 3GPP, has been involved in standardizing a  
20 number of 2G, 3G, and 4G mobile cellular technologies.

21 58. The ETSI IPR Policy<sup>1</sup> requires members to disclose on a timely, bona  
22 fide basis all intellectual property rights that they are aware of and believe may be  
23 essential to a proposed ETSI standard. In particular, Clause 4.1 of the ETSI IPR  
24 Policy provides that: "each [ETSI] MEMBER shall use its reasonable endeavors, in  
25 particular during the development of a STANDARD or TECHNICAL  
26  
27

28 <sup>1</sup> Available at <https://www.etsi.org/images/files/IPR/etsi-ipr-policy.pdf>

1 SPECIFICATION where it participates, to inform ETSI of ESSENTIAL IPRs in a  
2 timely fashion.” This obligation to disclose extends to members’ affiliates as well.

3 59. ETSI’s IPR Policy requires that participants disclose their relevant IPR  
4 during the development of a standard so that they may request that members owning  
5 patents potentially essential for the practice of a standard irrevocably commit to  
6 license those patents on FRAND terms and conditions to anyone practicing the  
7 standard. Specifically, clause 6 of ETSI’s IPR Policy states:

8 When an ESSENTIAL IPR relating to a particular STANDARD or  
9 TECHNICAL SPECIFICATION is brought to the attention of ETSI,  
10 the Director-General of ETSI shall immediately request the owner to  
11 give within three months an irrevocable undertaking in writing that it is  
12 prepared to grant irrevocable licences on fair, reasonable and non-  
13 discriminatory [FRAND] terms and conditions under such IPR... The  
above undertaking may be made subject to the condition that those who  
seek licences agree to reciprocate.

14 ETSI IPR Policy, § 6.1.

15 60. Clause 6.1 lists “MANUFACTURE, including the right to make or  
16 have made customized components and sub-systems to the licensee’s own design  
17 for use in MANUFACTURE,” as among the uses for which SEP holders must make  
18 mandatory FRAND licensing commitments.

19 61. FRAND commitments, pursuant to Clause 6 of the ETSI IPR Policy,  
20 “shall be interpreted as encumbrances that bind all successors-in-interest.”

21 62. ETSI defines “essential” as follows:

22 “ESSENTIAL” as applied to IPR means that it is not possible on  
23 technical (but not commercial) grounds, taking into account normal  
24 technical practice and the state of the art generally available at the time  
25 of standardization, to make, sell, lease, otherwise dispose of, repair, use  
26 or operate EQUIPMENT or METHODS which comply with a  
27 STANDARD without infringing that IPR. For the avoidance of doubt  
28 in exceptional cases where a STANDARD can only be implemented by  
technical solutions, all of which are infringements of IPRs, all such  
IPRs shall be considered ESSENTIAL.

1 ETSI IPR Policy, §15.6.

2 63. Although ETSI defines what it means by “essential,” it does not make  
3 any attempt (nor, in general, do any SSOs) to ascertain whether the patents declared  
4 as “essential” to a standard are valid and enforceable, or whether they are, in fact,  
5 technically essential. Which patents are deemed “essential” to a particular standard  
6 is self-proclaimed by the SSO member that declares its patents to be “essential” to  
7 the standard.

8 64. If the essential IPR owner refuses to undertake the requested  
9 commitment and informs ETSI of that decision, the ETSI General Assembly must  
10 “review the requirement for that STANDARD or TECHNICAL SPECIFICATION  
11 and satisfy itself that a viable alternative technology is available for the  
12 STANDARD or TECHNICAL SPECIFICATION” that is not blocked by that IPR  
13 and satisfies ETSI’s requirements. ETSI IPR Policy, § 8.1.1. Absent such a viable  
14 alternative, the ETSI IPR Policy requires that “work on the STANDARD or  
15 TECHNICAL SPECIFICATION shall cease.” *Id.*, § 8.1.2. In other words, ETSI  
16 will not agree to incorporate a member’s technology in a standard under  
17 consideration unless the member irrevocably binds itself to granting licenses on  
18 FRAND terms.

19 **InterDigital’s IPR Declarations**

20 65. As a member of ETSI and a participant in 3GPP standardization, in  
21 conjunction with the adoption of the 2G, 3G, and 4G standards, InterDigital made  
22 submissions to the technical bodies within ETSI, declaring that certain of its patents  
23 or patent applications may be or may become essential to the mobile device  
24 standards under consideration.<sup>2</sup> InterDigital also stated a commitment to license any  
25 such essential patents it held on FRAND terms and conditions.

26 \_\_\_\_\_  
27 <sup>2</sup> u-blox does not accept InterDigital’s representation that any (or all) of the patents  
28 identified as “essential” are, in fact, necessary for the compliant implementations of  
2G, 3G, and 4G technologies; nor does u-blox concede that the particular

1           66. Indeed, InterDigital entered into an irrevocable undertaking to grant  
 2 licenses to the disclosed allegedly essential patents on FRAND terms and  
 3 conditions, including submitting at least the following declarations to ETSI, true and  
 4 correct copies of which are attached as Exhibits 1 through 33.

25  
 26 implementations of such technologies in its products practice any InterDigital's  
 27 patents, including those identified by InterDigital in relation to these technologies.  
 28 Nonetheless, u-blox has relied upon the IPR declarations of InterDigital, and other  
 holders of declared-essential patents.

1 67. InterDigital made these declarations to ensure that the 2G, 3G, and 4G  
2 standards incorporated InterDigital’s technologies to the exclusion of alternative  
3 technologies, and so that manufactures of standard-compliant devices would require  
4 a license to InterDigital’s alleged SEPs.

5 68. While making the above declarations to ETSI, InterDigital concealed  
6 its intent to, among other things, charge supra-competitive royalty rates and demand  
7 discriminatory terms and conditions for a license to its alleged SEPs. The intent of  
8 this concealment was to deceive ETSI members so that technologies InterDigital  
9 claims to have patented were included in the standards. Pursuant to the ETSI IPR  
10 Policy, if InterDigital had been honest regarding its intent to refuse to license its  
11 alleged SEPs on FRAND terms and conditions, ETSI would have looked for  
12 alternative solutions to InterDigital’s technology or omitted that particular portion of  
13 the standard. *See* ETSI IPR Policy, § 8.1.3. Thus, but for InterDigital’s deceptive  
14 IPR declarations, alternative technologies would have been adopted into the  
15 standards by ETSI or no particular technology would have been specified.

16 69. The relevant markets are the markets for technologies covered by  
17 InterDigital patents that are essential, or alleged to be essential, to the 2G, 3G, and  
18 4G cellular standards, together with all other alternative technologies to the  
19 InterDigital patents that could have been used in the cellular standards.

20 **Overview of Cellular Standards**

21 70. InterDigital’s unlawful and anticompetitive behavior pertains to patents  
22 that it claims are essential to the 2G, 3G, and 4G cellular standards, which are  
23 described below.

24 **The 2G Standard**

25 71. The first widespread use of mobile phones began in the late 1970s and  
26 into early 1980s with analog systems, generally referred to as “1G.” From the  
27 viewpoint of a typical consumer experience today, these systems were relatively  
28 basic, supporting just a few analog signals (as opposed to digital signal) capable of

1 carrying voice calls. AMPS (Advanced Mobile Phone System) was one of the most  
2 successful 1G systems, and was widely deployed in the USA in the 1980s.  
3 However, there were many other regional and national systems in operation around  
4 the world at that time, leading to a fragmented market with individual regions  
5 having their own vendors and standards that were incompatible with one another.  
6 Today, none of these systems are commercially operational.

7       72. In the late 1980s, the cellular industry moved towards a second  
8 generation of mobile telephony, based on digital technology. Such systems  
9 introduced a number of important benefits over the previous analog 1G systems,  
10 such as improved voice quality, increased system capacity, increased system  
11 security, and the ability to integrate voice and data services.

12       73. For the first time, SMS (Short Messaging Service, *i.e.*, “texting” or  
13 “texts”) and basic data services became available. But there were divergent views  
14 on how to effectuate these benefits. Thus, there were a number of different  
15 standards considered to be 2G, including GSM, GPRS & EDGE, and CDMA &  
16 IS-95.

17       74. In Europe, a system called Global System for Mobile Communications  
18 (“GSM”), originally referred to as Groupe Spécial Mobile, evolved to become the  
19 dominant worldwide 2G standard.

20       75. GSM incorporated a number of technical advances over previous  
21 cellular systems. GSM introduced digital voice coding, which digitized voice calls  
22 and allowed better call quality. GSM also adopted for the air interface protocol the  
23 well-known Time Division Multiple Access (“TDMA”) scheme. TDMA operates  
24 by defining a number of time slots, and allocating the repetitive occurrence of a  
25 different time slot to each user. The collection of Time Slots for all users are carried  
26 within a single frequency.

27       76. Over the years, the functionality of GSM has been extended to support  
28 improved data services. These enhancements include a data service called General

1 Packet Radio Services (“GPRS”), which introduced relatively low speed packet data  
2 support in addition to GSM voice services and then-existing GSM circuit-switched  
3 data services. GPRS was then extended to a technology called Enhanced Data rates  
4 for GSM Evolution (“EDGE”), often referred to as Enhanced GPRS or EGPRS,  
5 which further increased the supported data rates.

6 77. GSM and these newer variants are still in use today. They can support  
7 voice service and user data rates with low to moderate data transmission speed.  
8 However, their importance has been quickly diminishing on a global basis as  
9 network operators move to “next generation” systems providing higher data rates for  
10 transmission of information much more efficiently, which benefits both the network  
11 operators and end users.

12 78. Despite the availability and widespread, global adoption of GSM, the  
13 technology was not initially widely commercialized in the United States. In the  
14 United States, a different 2G technology, based on a different wireless air interface  
15 named Code Division Multiple Access (“CDMA”), was being strongly championed  
16 by Qualcomm. Qualcomm eventually succeeded in getting its technology  
17 standardized. The corresponding standard is called IS-95.

18 79. At a very basic level, CDMA operates by assigning each user a unique  
19 identifier, a “spreading code,” which is used to “spread” all the digital data  
20 transmitted to or from that user. Because each user has a unique spreading code, a  
21 user need not be assigned a specified time slot as is required with TDMA. With  
22 CDMA, multiple users can communicate at the same time (*i.e.*, simultaneously)  
23 using the same frequency by transmitting messages that have been spread using  
24 different “spreading codes.”

25 80. Despite many early technical setbacks and much skepticism from the  
26 GSM industry, Qualcomm’s CDMA technology was standardized as IS-95, and  
27 commercialized under the name CDMAOne. It became widely deployed by several  
28

1 carriers in the United States in the mid to late 1990s, after initially being  
2 successfully deployed in South Korea.

3 **The 3G Standard**

4 81. In the mid to late 1990s, the cellular industry started a push towards a  
5 newer, more advanced system, able to support more users with improved reliability  
6 and better handling of data services.

7 82. Originally the hope was to adopt a single, global standard. However,  
8 over time, it became apparent that diverging regional interests would prevent a  
9 single system from being adopted. On the one hand, supporters of the GSM-based  
10 standards pushed to have a system based on the GSM core network, but with an  
11 enhanced Radio Access Network incorporating a new CDMA-based air interface  
12 known as Wideband CDMA (“WCDMA”). This standard is known as Universal  
13 Mobile Telecommunications System, or “UMTS.” On the other hand, supporters of  
14 the IS-95 family of standards pushed to enhance the existing IS-95 core network and  
15 CDMA air interface, to develop a new standard known as CDMA2000.

16 83. The first UMTS standard developed by 3GPP was called Release 99,  
17 and was followed by a minor “cleanup” revision called Release 4. The first major  
18 upgrade came in 2002 with Release 5, including a new feature called High Speed  
19 Downlink Packet Access (“HSDPA”), which was followed by Release 6 in and  
20 around early 2005 that introduced High Speed Uplink Packet Access (“HSUPA”).  
21 Together HSDPA and HSUPA (collectively known as High Speed Packet Access or  
22 “HSPA”) enhanced the download and upload speeds as compared to the original  
23 baseline specification. In 2007, Release 7 included an enhancement named High  
24 Speed Packet Access Evolution (“HSPA+”), which includes a number of technical  
25 modifications to support even higher data rates. More recent releases have further  
26 improved functionality.

27 84. UMTS, as improved through the various releases, remains in  
28 widespread use around the world today.

**The 4G Standard**

1  
2 85. For the first time in the evolution of cellular standards, the global  
3 cellular industry converged to a single wireless standard for use worldwide in the  
4 late 2000s: Long Term Evolution (“LTE”). This standard was developed by 3GPP,  
5 and it provides a natural evolutionary path for both UMTS and CDMA2000 network  
6 operators and their customers. Similar to the earlier generations, LTE also continues  
7 to evolve, including advances such as LTE-Advanced.

8 86. Work began in earnest on developing LTE around 2006, under the  
9 leadership of 3GPP. The first technical specifications, known as Release 8, were  
10 published in 2008. Release 8 includes functionality that theoretically supports  
11 downlink data rates of about 300 Mbps and uplink data rates of about 75 Mbps.

12 87. In 2011, an upgrade to LTE was published, referred to as Release 10,  
13 incorporating many features of what was known as LTE-Advanced. This upgrade  
14 includes a number of major technical enhancements to considerably increase LTE  
15 functionality. Commercial deployments of LTE-Advanced are in progress today.

16 88. Development of the LTE standard continued beyond Release 10 with  
17 incremental improvements to the standard, including many relevant to u-blox’s  
18 cellular modules.

19 89. In Release 12, 3GPP specified low-price machine-communication  
20 terminals as LTE terminal Category 0. These terminals feature a maximum data rate  
21 of 1Mbps, support for frequency division duplex and half duplex, and support for  
22 single antenna reception.

23 90. In Release 13, 3GPP defined two new terminal categories. Category  
24 M1 includes the features of Category 0, with the transceiver bandwidth limited to  
25 1.08 Mhz and support for coverage extension of approximately 15db. These  
26 limitations have cost reduction effects for chipsets compared to Category 0. Second,  
27 Release 13 defined the Narrowband IoT (“NB-IoT”) category of devices. NB-IoT is  
28 a subset of the LTE standard focused on indoor coverage, low cost, long battery life,

1 and high connection density. The NB-IoT category features transceiver bandwidth  
2 limited to 180kHz and support for coverage extension greater than 20db.

3 91. As of Release 13, the LTE standard defines 19 separate categories of  
4 user equipment (“UE”). These categories depend on maximum peak data rate and  
5 MIMO capabilities supported by the UE.

6 **Hold-up and Royalty Stacking**

7 92. Despite SSOs adopting IPR Policies incorporating FRAND  
8 commitments, some SEP owners have unfortunately attempted to exploit their  
9 monopoly power to extract supra-competitive royalty rates after implementers are  
10 locked into the standardized technology.

11 93. The exploitation of SEPs to extract unreasonable or discriminatory  
12 royalties is referred to as patent “hold-up.” The cumulative royalty burden required  
13 to satisfy all SEP holders is referred to as royalty stacking.

14 94. Hold-up harms competition and impedes implementation of standards,  
15 diminishing any benefits that flow from widespread adoption of the standard. The  
16 anticompetitive effects of hold-up are magnified when the total aggregate royalty  
17 stack is analyzed. The total royalty stack must be reasonable when viewed in the  
18 aggregate. The demands of individual SEP owners must be assessed in light of the  
19 total number of SEPs included in the standard and their relative technical  
20 contributions.

21 95. A number of cases that have been litigated in U.S. courts demonstrate  
22 that patent hold-up is a widespread problem, with SEP owners violating their  
23 FRAND commitments by making royalty demands significantly above the  
24 adjudicated FRAND rates. *See, e.g., TCL Commun. Tech. Holdings, LTD v.*  
25 *Telefonaktiebolaget LM Ericsson*, 2017 WL 6611635, at \*51-52 (C.D. Cal. Dec. 21,  
26 2017) (determining FRAND rates of 0.314%-0.45% for 4G, 0.224%-0.30% for 3G,  
27 and 0.09%-0.16% for 2G, as compared to Ericsson’s demand of 1.5% for 4G, 1.2%  
28 for 3G, and 0.8%-1.0% for 2G); *In re Innovatio IP Ventures, LLC Patent Litig.*,

1 2013 WL 5593609, at \*43 (N.D. Ill. Oct. 3, 2013) (for 19 asserted patents, assessing  
2 damages of \$0.0956 per unit as compared to the proposed royalty of \$16.17 per unit  
3 for tablet computers); *Microsoft Corp. v. Motorola, Inc.*, 2013 WL 2111217, at \*100  
4 (W.D. Wash. Apr. 25, 2013) (determining FRAND rate of \$0.03471 per Microsoft's  
5 xBox unit, as compared to Motorola's initial demand of \$6-\$8 per xBox unit).

6 96. Courts, regulators, and economists have also made clear that to be  
7 effective, the FRAND commitments in ETSI's IPR policy should: (a) limit royalties  
8 to the value that the SEP(s) had prior to inclusion in the ETSI standard and in light  
9 of other patented and unpatented technology essential to the standard; (b) prohibit  
10 charging royalties that are higher based upon the technology being written into the  
11 standard or that capture the value of the standard itself; and (c) require non-  
12 discriminatory treatment of licensees and potential licensees.

13 97. As explained below, and like the SEP owners from the aforementioned  
14 cases, an analysis of InterDigital's non-FRAND offers to u-blox for a new license  
15 demonstrates that InterDigital is attempting to abuse its monopoly power to extract  
16 the hold-up value of its alleged SEPs. InterDigital's offers to u-blox are completely  
17 untethered to the *ex ante* value of InterDigital's alleged SEPs, and would create an  
18 unsustainable royalty stack. In light of InterDigital's continued unreasonable  
19 demands for a license and related conduct, u-blox had no choice but to seek a  
20 judicial determination of the terms for a fair, reasonable, and non-discriminatory  
21 license.

### 22 **InterDigital's Refusal to Offer u-blox A New License on FRAND Terms**

23 98. As explained above, InterDigital is required to license its declared  
24 essential patents consistent, in all respects, with its binding commitment to ETSI,  
25 3GPP, and participants and implementers of the applicable standards. However, in  
26 disregard of its binding obligations, InterDigital is refusing to license its declared  
27 essential patents to u-blox on FRAND terms and conditions. Instead, InterDigital is  
28 attempting to exploit its market power gained as a result of its deceptive and

1 intentionally false FRAND commitments to attempt to extract supra-competitive  
2 royalties from u-blox.

24 101. [REDACTED]  
25 [REDACTED]  
26 [REDACTED] The study, conducted by Concur IP as part of  
27 unrelated litigation, evaluated a random sample of 33% of all the declared SEPs  
28 with at least one claim directed towards user equipment in order to determine which

1 patents were actually essential to the individual standards. Of the 286 patents  
2 declared essential to the LTE standard by InterDigital, Concur IP reviewed 95 of  
3 those patents and determined that 40 of those patents were actually  
4 essential. Accounting for sample size, Concur IP's survey indicates that InterDigital  
5 has approximately 120 UE patent families which are actually essential to the 4G  
6 standard. Relying on the Concur IP survey, the Court in that litigation found that  
7 there were a total of 1481 patents that were essential to the 4G standard.  
8 Accordingly, InterDigital owns approximately 8.10% of all 4G SEPs for user  
9 equipment.<sup>3</sup> [REDACTED]

10 justified by its proportional share of LTE SEPs is unfair and unreasonable.

11 102. [REDACTED]

12 [REDACTED]  
13 [REDACTED] InterDigital's royalty demands cannot  
14 be consistent with its obligation to license its SEPs on fair and reasonable  
15 terms. Rather, such a demand can only be explained by InterDigital's attempt to  
16 exploit its undue market power to extract supra-competitive royalties that in no way  
17 reflect the value of the patented technology. While the market may have entry  
18 barriers, InterDigital has the power to extract supra-competitive prices and possesses  
19 a dominant market share.

20 103. Similarly, Concur IP's analysis for 3G determined that InterDigital  
21 holds approximately 114 out of a total of 953 3G SEPs, or 12% of all 3G  
22 SEPs. [REDACTED]

23 \_\_\_\_\_  
24 <sup>3</sup> The results of the Concur IP survey, which analyzed patents essential to all facets  
25 of the standards applicable to user equipment, may overestimate the number of  
26 InterDigital's SEPs applicable to u-blox's cellular module products which only  
27 practice a subset of the standards. The Concur IP survey may also overestimate the  
28 number of InterDigital's SEPs for other reasons as well, including regional  
differences in the strength InterDigital's patent portfolio, the expiration of  
InterDigital's patents over the course of the license, and exhaustion of InterDigital's  
alleged SEPs due to authorized sales to u-blox by licensees, among others.

1 [REDACTED]  
2 [REDACTED]  
3 [REDACTED]  
4 [REDACTED] Again, InterDigital’s royalty demand  
5 cannot be consistent with its FRAND obligation.

6 104. InterDigital’s licensing offers to u-blox for a new license violate its  
7 commitment to ETSI and are entirely inconsistent with FRAND principles. Instead,  
8 InterDigital has negotiated in bad faith to exploit its monopoly power and attempted  
9 to maximize the hold-up value it can extract from u-blox.

10 105. Put simply, in breach of its FRAND commitment, InterDigital is  
11 attempting to exploit the monopoly power it gained through standardization to  
12 demand supra-competitive royalty rates which are grossly disproportionate to the  
13 value of the technical contribution of its small number of SEPs.

14 106. In addition, as explained below, InterDigital’s conduct during  
15 negotiations with u-blox for a new license cannot be reconciled with its FRAND  
16 commitment.

17 **In A Blatant Attempt To Coerce u-blox To Enter Into a New License**  
18 **Agreement That Is Not on FRAND Terms, InterDigital Refuses To Refrain**  
19 **From Interfering With u-blox’s Customer Relationships (Again)**

20 107. [REDACTED]  
21 [REDACTED]

22 108. [REDACTED]  
23 [REDACTED]  
24 [REDACTED]  
25 [REDACTED]

26 109. [REDACTED]  
27 [REDACTED]

28

1 [REDACTED]

2 [REDACTED]

3 110. [REDACTED]

4 [REDACTED]

5 [REDACTED]

6 [REDACTED]

7 [REDACTED]

8 [REDACTED]

9 [REDACTED]

10 111. Therefore, because the rates that u-blox was paying were not FRAND  
11 rates, [REDACTED]

12 [REDACTED]

13 [REDACTED]

14 112. Such a true-up provision is commonly agreed to by patent owners  
15 negotiating in good faith with licensees or potential licensees, in order to allow  
16 licensees to negotiate without the licensee being unfairly locked into paying non-  
17 FRAND rates without any chance to be made whole. [REDACTED]

18 [REDACTED]

19 113. But, even more troubling at the time, in a blatant attempt to force u-  
20 blox to pay excessive non-FRAND rates, InterDigital reached out to u-blox's  
21 customers and downstream manufacturers, [REDACTED]

22 [REDACTED]

23 [REDACTED]

24 114. InterDigital's conduct was unnecessarily destructive and outrageous  
25 because InterDigital knew that: (i) u-blox's customers and downstream  
26 manufacturers [REDACTED]

27 [REDACTED], and (ii) u-blox was a ready and willing InterDigital

28 licensee once the FRAND rate was determined. As such, there was no legitimate

1 reason why InterDigital would reach out u-blox's customers or downstream  
2 manufacturers.

3 115. In addition, InterDigital was and is well aware of the fact that: (i) u-  
4 blox entered into relationships with its customers in reliance on InterDigital's  
5 commitment to offer a license to its alleged SEPs on FRAND terms, and (ii) u-  
6 blox's customers and downstream manufacturers had relied on u-blox to enter into a  
7 FRAND license with InterDigital prior to designing and incorporating u-blox's  
8 technology into their products.

9 116. In sum, because u-blox was willing to enter into a FRAND license,  
10 there was no legitimate reason why InterDigital should have or needed to contact u-  
11 blox's customers and downstream manufacturers.

12 117. Nonetheless, even though the parties were in negotiations for a new  
13 license, in order to apply pressure to u-blox, InterDigital reached out to u-blox's  
14 customers and downstream manufacturers, [REDACTED]

28

124. [REDACTED]

[REDACTED] As such, and in order to limit the time when u-blox would continue to be forced to pay royalties that were not FRAND, [REDACTED]

[REDACTED]

125. [REDACTED]

126. [REDACTED]

127. [REDACTED]

1 128. u-blox is ready, willing, and able to enter into a license with  
2 InterDigital once the FRAND terms and conditions for a license to InterDigital's  
3 2G, 3G, and 4G SEPs are determined.

4 129. However, it has become clear that InterDigital has no intention of  
5 granting u-blox a license to its allegedly essential 2G, 3G, and 4G patents on  
6 FRAND terms and conditions.

7 130. In addition, InterDigital has no incentive to conclude negotiations for a  
8 license with u-blox on FRAND rates because, as explained above, InterDigital  
9 requires that u-blox pay the current, non-FRAND rates, while license negotiations  
10 continue. As such, u-blox must make an entirely unfair Hobson's choice: refuse to  
11 capitulate to InterDigital's unfair demands and risk losing its customers and  
12 business, pay InterDigital excessive non-FRAND royalties while the parties  
13 negotiate, or agree to a new license that is not on FRAND terms. Given these clear  
14 hold-up conditions, u-blox has no choice but to file this action.

15 **The Irreparable Harm to u-blox**

16 131. In justifiable reliance upon InterDigital's promises that it would license  
17 its technology to u-blox and others on FRAND terms, [REDACTED]  
18 [REDACTED]  
19 [REDACTED]

20 132. However, InterDigital's wrongful non-FRAND demands of u-blox and  
21 wrongful interference with u-blox's current and potential future customer  
22 relationships will not only lead to a loss of business for u-blox, but InterDigital's  
23 threats to u-blox's customer relationships, and related loss of trust, reputation, and  
24 goodwill [REDACTED]

25 [REDACTED]  
26 [REDACTED]

27 133. u-blox has no adequate remedy at law.  
28

1           134. Based on the foregoing, u-blox seeks, *inter alia*,: (i) a judicial  
2 declaration that InterDigital’s promises to ETSI, 3GPP, and their respective  
3 members and affiliates constitute contractual obligations that are binding and  
4 enforceable by u-blox; (ii) a judicial declaration that InterDigital has breached these  
5 obligations by demanding excessive, unfair, unreasonable, and discriminatory  
6 royalties from u-blox; (iii) a judicial decree enjoining InterDigital from further  
7 demanding excessive royalties from u-blox and u-blox’s customers that are not  
8 consistent with InterDigital’s FRAND obligations; (iv) a judicial accounting of what  
9 constitutes a FRAND royalty rate in all respects consistent with InterDigital’s  
10 commitment to license its patents identified as (or alleged to be) “essential” to the  
11 2G, 3G, and/or 4G standards; (v) a judicial determination that InterDigital’s refusal  
12 to agree to a new license is a breach of InterDigital’s commitments to ETSI; (vi) a  
13 judicial determination that InterDigital’s deceptive and deliberately false  
14 declarations to ETSI constitute violations of Section 2 of the Sherman Act; (vii) a  
15 judicial determination that InterDigital is liable for interference with contractual  
16 relations (viii) a jury trial on all issues so triable; (ix) an injunction prohibiting  
17 InterDigital from contacting u-blox’s customers or their downstream manufacturers  
18 and stating that u-blox does not have an InterDigital license or demanding royalties  
19 from them; and (x) all other relief to which u-blox may be entitled.

20

21

**CLAIMS FOR RELIEF**  
**FIRST CAUSE OF ACTION**  
**(Breach Of Contract)**

22

23           135. u-blox re-alleges and incorporates by reference the allegations set forth  
24 in the foregoing paragraphs.

25

26           136. InterDigital entered into contractual commitments with ETSI, 3GPP  
27 and their respective members, participants, and implementers relating to the 2G, 3G,  
28 and 4G standards. As a member of ETSI and to comply with ETSI’s IPR Policy,  
InterDigital made a binding commitment to ETSI, ETSI members, and third party

1 implementers to grant irrevocable licenses to InterDigital’s SEPs on FRAND terms  
2 and conditions.

3       137. InterDigital’s ETSI membership and activities, including the  
4 declarations it made to comply with ETSI’s IPR policy for InterDigital’s SEPs,  
5 created an express and/or implied contract with ETSI and/or ETSI members,  
6 including an agreement that InterDigital would license those patents on FRAND  
7 terms and conditions. ETSI’s IPR Policy does not limit the right to obtain a license  
8 on FRAND terms and conditions to ETSI members; third parties that are not ETSI  
9 members also have the right to be granted licenses under those patents on FRAND  
10 terms and conditions. Each and every party with products that implement the 2G,  
11 3G, and 4G standards promulgated by ETSI is an intended third-party beneficiary of  
12 InterDigital’s contractual commitments, including u-blox, its suppliers, and its  
13 customers.

14       138. However, despite u-blox’s good faith efforts to negotiate a license to  
15 InterDigital’s alleged SEPs, InterDigital is refusing to offer u-blox a license on  
16 FRAND terms and conditions.

17       139. InterDigital has breached its FRAND obligations by refusing to agree  
18 to license its SEPs to u-blox at reasonable rates, with reasonable terms, and on a  
19 non-discriminatory basis.

20       140. As a result of InterDigital’s contractual breach, u-blox has been injured  
21 in its business or property and is threatened by imminent loss of profits, loss of  
22 customers and potential customers, and loss of goodwill and product image.

23       141. u-blox has suffered and will continue to suffer irreparable injury by  
24 reason of the acts, practices, and conduct of InterDigital alleged above until and  
25 unless the Court enjoins such acts, practices, and conduct.

26 ///

27 ///

28

**SECOND CAUSE OF ACTION**  
**(Promissory Estoppel)**

1  
2  
3 142. u-blox re-alleges and incorporates by reference the allegations set forth  
4 in the foregoing paragraphs.

5 143. InterDigital made a clear and definite promise to all potential  
6 implementers of the 2G, 3G, and 4G standards through its commitments to ETSI  
7 and 3GPP that it had granted, or would grant, licenses to any essential patents on  
8 fair, reasonable, and non-discriminatory terms and conditions.

9 144. The intended purpose of InterDigital's promises was to induce reliance  
10 upon these promises so that companies like u-blox would invest substantial  
11 resources to design, develop, and produce products compatible with the relevant  
12 standards. InterDigital knew or should have reasonably expected to know that it  
13 would induce reliance on these promises by companies such as u-blox.

14 145. u-blox developed and marketed its products and services in reliance on  
15 InterDigital's promises, including making its products and services compliant with  
16 ETSI and 3GPP standards, including the 2G, 3G, and 4G standards, in various u-  
17 blox product offerings.

18 146. InterDigital is estopped from renegeing on these promises to ETSI and  
19 3GPP under the doctrine of promissory estoppel.

20 147. u-blox has been harmed as a result of its reasonable reliance on  
21 InterDigital's promises and is threatened by the imminent loss of profits, loss of  
22 customers and potential customers, and loss of goodwill and product image.

23 148. u-blox has suffered and will continue to suffer irreparable injury by  
24 reason of the acts and conduct of InterDigital alleged above until and unless the  
25 court enjoins such acts, practices, and conduct.

26 149. Moreover, InterDigital's breach of its FRAND obligations further  
27 constitutes waiver and/or estoppel of InterDigital's rights to enforce any declared-  
28 essential patents against any entity allegedly practicing the standard.

1 **THIRD CAUSE OF ACTION**  
2 **(Declaratory Judgment)**

3 150. u-blox re-alleges and incorporates by reference the allegations set forth  
4 in the foregoing paragraphs.

5 151. InterDigital is contractually obligated to license its 2G, 3G, and 4G  
6 SEPs on FRAND terms and conditions. There is a dispute between the parties  
7 concerning whether InterDigital has offered u-blox a license to its 2G, 3G, and 4G  
8 SEPs on FRAND terms and conditions consistent with InterDigital's irrevocable  
9 commitments in its declarations to ETSI and the referenced policy of ETSI and  
10 3GPP.

11 152. As a result of the acts described in the foregoing paragraphs, there  
12 exists a definite and concrete, real and substantial, justiciable controversy between  
13 u-blox and InterDigital regarding what constitutes FRAND terms and conditions for  
14 a license to InterDigital's 2G, 3G, and 4G SEPs with respect to u-blox's products.  
15 This dispute is of sufficient immediacy and reality to warrant the issuance of a  
16 declaratory judgment.

17 153. u-blox is entitled to a declaratory judgment that InterDigital has not  
18 offered license terms to u-blox conforming to applicable legal requirements,  
19 including failing to offer u-blox a license to its 2G, 3G, and 4G SEPs on FRAND  
20 terms and conditions. Moreover, u-blox is entitled to a declaratory judgment that  
21 sets the FRAND terms and conditions, including but not limited to the FRAND  
22 royalty rate, for a license to InterDigital's 2G, 3G, and 4G SEPs.

23  
24 **FOURTH CAUSE OF ACTION**  
25 **Antitrust Monopolization In Violation Of Section 2 Of The Sherman Act)**

26 154. u-blox re-alleges and incorporates by reference the allegations set forth  
27 in the foregoing paragraphs.

28

1           155. This is an action for antitrust monopolization in violation of Section 2  
2 of the Sherman Act.

3           156. As a member of ETSI and an active participant in 3G and 4G consensus  
4 standardization efforts through 3GPP, InterDigital was obligated to comply with the  
5 ETSI IPR Policy. That policy requires the owner of patents that might be essential  
6 to a standard to file an IPR disclosure statement that among other things contains an  
7 irrevocable commitment to be prepared to license the disclosed IPRs on FRAND  
8 terms and conditions to those who implement the relevant standards. Over time, to  
9 secure inclusion of its own proposed technology in the evolving 3G and 4G  
10 standards, as well as other technology allegedly covered by its patents, InterDigital  
11 submitted IPR Declarations in which it promised to license its patents on FRAND  
12 terms and conditions. As a result of InterDigital's IPR disclosures, its alleged  
13 patented technology was incorporated into the standards and other alternative  
14 technologies that might otherwise have been considered for inclusion in the standard  
15 were not adopted.

16           157. InterDigital's promises to license its allegedly essential patents on  
17 FRAND terms and conditions were intentionally false and misleading. InterDigital  
18 had no intention of licensing its alleged SEPs on FRAND terms and conditions.

19           158. Indeed, as explained above, with u-blox, InterDigital is attempting to  
20 exploit its undue monopoly power by attempting to extract supra-competitive  
21 royalty rates, to force u-blox to pay royalties on expired patents, and to charge u-  
22 blox the same royalty rates for high-speed LTE categories and low-speed LTE  
23 which may not even practice InterDigital's alleged SEPs, among other FRAND  
24 violations.

25           159. As a result of the alleged incorporation of its patented technology into  
26 the 2G, 3G, and 4G standards, InterDigital has monopoly power in the markets for  
27 those technologies. As a result of its alleged incorporation in the standards, this  
28 technology is not interchangeable with or substitutable for other technologies, and

1 those who comply with the 3G and 4G standards are locked in to those technologies.  
2 As a result, InterDigital has the power to extract supra-competitive prices for  
3 licenses for those technologies. Accordingly, InterDigital has a dominant market  
4 share in the markets for these technologies and the markets have significant barriers  
5 to entry post-standardization.

6 160. InterDigital has obtained and maintained its market power in these  
7 technology markets willfully and not as a consequence of a superior product,  
8 business acumen, or historic accident. InterDigital excluded competition through its  
9 intentional false promise to license the relevant technologies on FRAND terms,  
10 which ETSI and its members relied on in choosing to incorporate standard-  
11 compliant technology related to InterDigital's allegedly patented technology.  
12 InterDigital's deceptive conduct induced 3GPP and ETSI, through the voluntary  
13 consensus driven processes they use, to incorporate technology into the 3G and 4G  
14 standards that they would not have absent a FRAND commitment.

15 161. InterDigital's actions show that it has never intended to comply with its  
16 promises to license its allegedly essential patents on FRAND terms and conditions.  
17 InterDigital refuses to engage with u-blox's good faith efforts to determine fair,  
18 reasonable, and non-discriminatory terms and conditions. Instead, InterDigital is  
19 insisting that u-blox pay royalty rates that are several times higher than justified by  
20 the strength of InterDigital's SEPs.

21 162. These anticompetitive acts are an abuse of InterDigital's monopoly  
22 power in the relevant worldwide markets and establish a violation of Section 2 of  
23 the Sherman Act.

### 24 **Relevant Technology Markets**

25 163. For the purposes of u-blox's antitrust claim, the relevant markets are  
26 the technologies covered by the InterDigital declared essential patents—inclusive of  
27 those issued in the United States and elsewhere—that InterDigital has asserted  
28 against u-blox for products that implement the 2G, 3G, and 4G standards, together

1 with all other alternative technologies to the InterDigital technologies that could  
2 have been incorporated into the standards (collectively, the “Relevant Technology  
3 Markets”).

4 164. Once ETSI adopts technology for a mobile standard, the owner of each  
5 essential patent whose technology is incorporated into that standard obtains  
6 monopoly power in a relevant technology market. When patented technology is  
7 incorporated in a standard, adoption of the standard eliminates alternatives to the  
8 patented technology, and companies wanting to market devices that comply with the  
9 standard are locked in and must use the SEPs.

10 165. As previously discussed, InterDigital has declared many of its patents  
11 to be essential to one or more of the standards and made irrevocable undertakings to  
12 license those patents on FRAND terms. If InterDigital’s declarations are correct,  
13 then the market encompassed within the Relevant Technology Markets can be  
14 identified from InterDigital’s declarations to ETSI and InterDigital’s allegations of  
15 essentiality during licensing negotiations with u-blox.

16 166. Before the adoption of the standards, competitors in the Relevant  
17 Technology Markets included companies with technology capable of performing the  
18 same or equivalent functions that could have been adopted by ETSI and its  
19 members. These additional competitors include the companies that offered  
20 technologies that could have been used in alternative mobile standards that were  
21 foreclosed once ETSI members adopted a standard that included InterDigital’s  
22 technologies. Because of the lock-in effect described above, InterDigital became  
23 the only commercially viable seller inside and outside the United States in each of  
24 the Relevant Technology Markets.

25 167. After the standards were set and InterDigital’s technology was adopted  
26 into the standard, implementers such as u-blox invested significant revenue and  
27 other resources developing products that practice the standard. Those investments  
28 were made in reliance on the commitment InterDigital and other SEP owners made

1 to license their patents on FRAND terms and conditions. u-blox and other  
2 implementers were effectively locked into practicing InterDigital's technology when  
3 it was adopted into the standard, and, as a result, alternatives to the patent  
4 technologies no longer constrain InterDigital's ability to demand royalty rates far in  
5 excess of the value of the patented technology as the alternative technologies would  
6 have prior to the adoption of the standard ("*ex ante*").

### 7 **InterDigital's Antitrust Violations**

8 168. Courts, regulators, and economists have made clear that to be effective,  
9 the FRAND commitments in ETSI's IPR policy should: (a) limit royalties to the  
10 value that the SEP(s) had prior to inclusion in the ETSI standard and in light of other  
11 patented and unpatented technology essential to the standard; (b) prohibit charging  
12 royalties that are higher based upon the technology being written into the standard  
13 or that capture the value of the standard itself; and (c) require non-discriminatory  
14 treatment of licensees and potential licensees.

15 169. ETSI's FRAND commitment grants implementers the right to practice  
16 claimed SEPs. Participants in standards development and third-party implementers  
17 rely on these irrevocable contractual undertakings to ensure that the widespread  
18 adoption of the standard will not be hindered by SEP owners attempting to extract  
19 unreasonable royalties and terms from those implementing the standard.

20 170. u-blox asserts this claim to obtain a FRAND license and enjoin  
21 InterDigital from continuing its abusive licensing practices and InterDigital's  
22 unlawful monopolization in certain relevant markets for 2G, 3G, and 4G cellular  
23 technologies. InterDigital has engaged in an unlawful scheme to exploit its undue  
24 market power over technologies necessary for implementers, including u-blox, to  
25 practice the 2G, 3G, and 4G standards. InterDigital's market power is due solely to  
26 its false commitments to license its alleged SEPs on FRAND terms and conditions,  
27 which was a necessary step in locking its technology into the standard(s).

28

1           171. Participants in the 2G, 3G, and 4G standardization, including all ETSI  
2 members and u-blox in particular, relied on InterDigital’s intentionally false  
3 promises to license its alleged SEPs on FRAND terms and conditions in choosing to  
4 incorporate those allegedly essential patented technologies into the standards. As a  
5 result of InterDigital’s FRAND commitments, its allegedly essential patent  
6 technology was included in the standards and alternative technologies were  
7 excluded. Through its deceptive acts and practices, InterDigital is unlawfully  
8 monopolizing the Relevant Technology Markets.

9           172. After acquiring its unlawful monopolization of the Relevant  
10 Technology Markets, InterDigital has exploited this ill-gotten power against u-blox  
11 by refusing to offer a license on FRAND terms, by among other things:

- 12                   • Refusing to honor its obligation to license its alleged SEPs on
- 13                   FRAND terms and conditions;
- 14                   • Attempting to seek supra-competitive royalty rates from u-blox
- 15                   for a license to its 2G, 3G, and 4G patents;

16  
17  
18  
19  
20           173. InterDigital’s actions injure competition by excluding alternate  
21 technologies which could have been included in the standard. As a direct and  
22 proximate consequence of InterDigital’s unlawful monopolization, customers of the  
23 Relevant Technology Markets (implementers of the standards such as u-blox) face  
24 drastically higher costs for access to cellular technologies necessary for the  
25 manufacture of standard-compliant products than they would have paid in a  
26 competitive marketplace.

27           174. InterDigital’s wrongful conduct prevents u-blox from obtaining access  
28 to alternative technologies in the Relevant Technology markets. The antitrust injury

1 associated with InterDigital’s unlawful monopolization also extends to consumers in  
2 the downstream market for the technology, such as u-blox’s cellular modules, in the  
3 form of higher prices, reduced innovation, and more limited choice for such  
4 standard-compliant products. Indeed, the necessary result of raising costs to some  
5 competing manufacturers in the marketplace for standard-compliant products and  
6 diverting resources that otherwise would have fueled additional innovation is to  
7 limit consumer choices in complementary technologies and other technology used in  
8 standard-compliant products.

9 175. InterDigital has leverage over manufacturers of standard-compliant  
10 products that it would not possess but for its false promises to ETSI to license its  
11 alleged SEPs on FRAND terms and conditions, and its unlawful acquisition of  
12 monopoly power in the Relevant Technology Markets. As a result of said leverage,  
13 manufacturers of standard-compliant products, including u-blox, must either  
14 capitulate to InterDigital’s demand for supra-competitive royalty rates or face the  
15 costs and risks of protracted patent litigation on a global scale.

16 176. Absent InterDigital’s wrongful conduct, which resulted in alternate  
17 technologies being excluded from the relevant standards, u-blox would be able to  
18 obtain a new license to access necessary technology in the Relevant Technology  
19 Markets on fair, reasonable, and non-discriminatory terms.

20 177. Therefore, to prevent harm to u-blox’s business and property, including  
21 its cellular module products, and further harm to competition more generally in the  
22 Relevant Technology Markets, u-blox brings this action for treble damages,  
23 declaratory relief, and injunctive relief under Sections 4 and 16 of the Clayton Act,  
24 15 U.S.C. §§ 15, 26.

**FIFTH CAUSE OF ACTION**  
**(Declaratory Judgment of Non-Infringement of U.S. Patent No. 8,432,876)**

178. u-blox re-alleges and incorporates by reference the allegations set forth in the foregoing paragraphs.

179. U.S. Patent No. 8,432,876 (“’876 Patent”), attached hereto as Exhibit 34, entitled “Techniques For Setting Up Traffic Channels In A Communications System,” indicates that it issued on April 30, 2013. U.S. Patent and Trademark Office (“USPTO”) records indicate that InterDigital is the assignee of the ’876 Patent.

180. There is a dispute between the parties concerning whether certain u-blox products infringe one or more claims of the ’876 Patent. During the course of licensing negotiations, [REDACTED]

181. u-blox alleges that the ’876 Patent is not essential to the LTE standard and, therefore, u-blox’s products, which implement the LTE standard, do not practice one or more claims of the ’876 Patent. By way of non-limiting example, the LTE standard does not require at least the claimed technique of monitoring control information that includes the claim limitations of “wherein the control information includes a forward traffic channel allocation information and a reverse traffic channel allocation information,” “wherein the control information in each first time interval is received in less than or equal to a slot,” and “wherein the second time interval is defined by a plurality of slots.”

182. No claim of the ’876 Patent has been or is infringed, either directly, contributorily, or by inducement, literally or under the doctrine of equivalents, by u-blox or the purchasers of u-blox’s products through the manufacture, use, importation, sale, and/or offer for sale of u-blox’s products, at least because, by

1 way of non-limiting example, u-blox’s products do not satisfy the following claim  
2 limitation “wherein the control information includes a forward traffic channel  
3 allocation information and a reverse traffic channel allocation information,”  
4 “wherein the control information in each first time interval is received in less than or  
5 equal to a slot,” and “wherein the second time interval is defined by a plurality of  
6 slots.”

7 183. An actual and justiciable controversy exists between u-blox and  
8 InterDigital with respect to whether u-blox’s products infringe one or more claims  
9 of the ’876 Patent.

10 184. Pursuant to the Federal Declaratory Judgment Act, 28 U.S.C. § 2201 *et*  
11 *seq.*, u-blox requests the declaration of the Court that u-blox’s products do not  
12 infringe one or more claims of the ’876 Patent.

13

14 **SIXTH CAUSE OF ACTION**  
15 **(Declaratory Judgment of Non-Infringement of U.S. Patent No. 8,953,548)**

16 185. u-blox re-alleges and incorporates by reference the allegations set forth  
17 in the foregoing paragraphs.

18 186. U.S. Patent No. 8,953,548 (“’548 Patent”), attached hereto as Exhibit  
19 35, entitled “Method And Apparatus For Monitoring And Processing Component  
20 Carriers,” indicates that it issued on April 8, 2003. USPTO records indicate that  
21 InterDigital is the assignee of the ’548 Patent.

22 187. There is a dispute between the parties concerning whether certain u-  
23 blox products infringe one or more claims of the ’548 Patent. During the course of  
24 licensing negotiations, [REDACTED]

25 [REDACTED]

26 [REDACTED]

27 [REDACTED]

28

1 188. u-blox alleges that the '548 Patent is not essential to the LTE standard  
2 and, therefore, u-blox's products which implement the LTE standard do not practice  
3 one or more claims of the '548 Patent. By way of non-limiting example, the LTE  
4 standard does not require at least the claimed method steps of "receiving a medium  
5 access control (MAC) control element (CE), wherein the MAC CE indicates that the  
6 at least one additional component carrier is to be activated, and the MAC CE  
7 comprises a bit combination field that is indicative of which component carriers are  
8 to be activated" and "activating the at least one additional component carrier based  
9 on receiving the MAC CE."

10 189. No claim of the '548 patent has been or is infringed, either directly,  
11 contributorily, or by inducement, literally or under the doctrine of equivalents, by  
12 u-blox or the purchasers of u-blox's products through the manufacture, use,  
13 importation, sale, and/or offer for sale of u-blox's products, at least because, by  
14 way of non-limiting example, u-blox's products do not satisfy the claimed method  
15 steps of "receiving a medium access control (MAC) control element (CE), wherein  
16 the MAC CE indicates that the at least one additional component carrier is to be  
17 activated, and the MAC CE comprises a bit combination field that is indicative of  
18 which component carriers are to be activated" and "activating the at least one  
19 additional component carrier based on receiving the MAC CE."

20 190. An actual and justiciable controversy exists between u-blox and  
21 InterDigital with respect to whether u-blox's products infringe one or more claims  
22 of the '548 Patent.

23 191. Pursuant to the Federal Declaratory Judgment Act, 28 U.S.C. § 2201 *et*  
24 *seq.*, u-blox requests the declaration of the Court that u-blox's products do not  
25 infringe one or more claims of the '548 Patent.

28

**PRAYER FOR RELIEF**

WHEREFORE, u-blox prays for relief as follows:

- A. Adjudge and decree that InterDigital is liable for breach of its contractual commitments to ETSI;
- B. Adjudge and decree that InterDigital is liable for promissory estoppel;
- C. Adjudge and decree that InterDigital has not offered u-blox a new license to its 2G, 3G, and/or 4G SEPs under reasonable rates, with reasonable terms and conditions, and that are demonstrably free of any unfair discrimination;
- D. Adjudge, set, and decree the FRAND terms and conditions that u-blox is entitled to for a license to InterDigital’s 2G, 3G, and 4G SEPs;
- E. Enjoin InterDigital from demanding excessive royalties from u-blox that are not consistent with InterDigital’s FRAND obligations;
- F. Adjudge and decree that u-blox is entitled to a license from InterDigital for any and all patents that InterDigital deems “essential” and/or has declared “essential” to the 2G, 3G, and 4G standards under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination;
- G. Enjoin InterDigital from enforcing its 2G, 3G, and/or 4G SEPs against u-blox or any of its downstream manufactures or customers;
- H. Enjoin InterDigital from forcing u-blox to take a bundled license to InterDigital’s SEPs that are not implemented by the portions of the 2G, 3G and/or 4G standards practiced by u-blox’s products;
- I. Adjudge and decree that InterDigital has violated Section 2 of the Sherman Act and enjoin InterDigital from further violations of that statute;
- J. Adjudge and decree that u-blox does not infringe the ’876 Patent;
- K. Adjudge and decree that u-blox does not infringe the ’548 Patent;
- L. Enter judgment against InterDigital for the amount of damages that u-blox proves at trial, including, as appropriate, exemplary damages;

1 M. Enter a judgment awarding u-blox its expenses, costs, and attorneys’  
2 fees under applicable laws;

3 N. Award u-blox pre-judgment and post-judgment interest to the full  
4 extent allowed under the law, as well as its costs;

5 O. Enjoining InterDigital during the pendency of this action or until a  
6 FRAND rate is otherwise determined from (i) contacting u-blox’s customers and  
7 downstream manufacturers and claiming that u-blox does not have a license to  
8 InterDigital’s alleged SEPs or demanding royalty payments from them; or (ii)  
9 intentionally disrupting or otherwise interfering with u-blox’s relationships with its  
10 customers or downstream manufacturers; and

11 P. For such other and further relief as the Court deems just and proper.
