*Attorneys for Plaintiff  
Data Scape Limited*

**UNITED STATES DISTRICT COURT  
CENTRAL DISTRICT OF CALIFORNIA**

DATA SCAPE LIMITED,  
Plaintiff,  
v.  
TERADATA OPERATIONS, INC.  
Defendant.

Case No. 2:19-cv-01002  
**COMPLAINT FOR PATENT  
INFRINGEMENT**  
**JURY TRIAL DEMANDED**

1 This is an action for patent infringement arising under the patent laws of the  
2 United States, 35 U.S.C. This Court has original subject matter jurisdiction pursuant  
3 to 28 U.S.C. §§ 1331 and 1338(a).

4 **PARTIES**

5 1. Data Scape is a company organized under the laws of Ireland with its  
6 office located at Office 115, 4-5 Burton Hall Road, Sandyford, Dublin 18, Ireland.

7 2. On information and belief, Defendant Teradata Operations, Inc.  
8 (“Teradata” or “Defendant”) is a Delaware corporation with its principal office at  
9 10000 Innovation Drive, Dayton, Ohio 45342. On information and belief, Teradata  
10 maintains offices within this District at 601 N Nash St, El Segundo, CA 90245. On  
11 information and belief, Teradata also maintains additional offices in Southern  
12 California at 17095 Via Del Campo, San Diego, CA 92127. On information and  
13 belief, Teradata Operations, Inc. can be served through its registered agent, C T  
14 Corporation System, 818 West Seventh St Suite 930, Los Angeles, CA 90017.

15 **JURISDICTION AND VENUE**

16 3. This Court has personal jurisdiction over Defendant in this action  
17 because Defendant resides in the Central District of California and has committed  
18 acts within this district giving rise to this action and has established minimum  
19 contacts with this forum such that the exercise of jurisdiction would not offend  
20 traditional notions of fair play and substantial justice. Defendant, directly and  
21 through subsidiaries or intermediaries, has committed and continues to commit acts  
22 of infringement in this District by, among other things, offering to sell and selling  
23 products and/or services that infringe the asserted patents.

24 4. Venue is proper in this district under 28 U.S.C. § 1400(b). Defendant  
25 has transacted business in this district and has committed acts of direct and indirect  
26 infringement in this district. Defendant has a regular and established place of  
27 business in this District, including, e.g., its headquarters and principal place of  
28 business.

**COUNT I**

**INFRINGEMENT OF U.S. PATENT NO. 8,386,581**

1  
2  
3 5. Data Scape is the owner by assignment of United States Patent No.  
4 8,386,581 (“the ’581 Patent”), entitled “Communication System And Its Method and  
5 Communication Apparatus And Its Method.” The ’581 Patent was duly and legally  
6 issued by the United States Patent and Trademark Office on February 26, 2013. A  
7 true and correct copy of the ’581 Patent is included as Exhibit A.

8 6. Defendant has offered for sale, sold and/or imported into the United  
9 States products and services that infringe the ’581 patent, and continues to do so. By  
10 way of illustrative example, these infringing products and services include, without  
11 limitation, Defendant’s products and services, *e.g.*, Unity, Unity Director, Unity  
12 Loader, Data Mover, Teradata Managed Server Unity, Unity Director/Loader Model  
13 8-81X and Expansion Server Model 8-81XE, Unity Source Link Server, Teradata  
14 Managed Server Unity Data Mover, and all versions and variations thereof since the  
15 issuance of the ’581 Patent (“Accused Instrumentalities”).

16 7. Defendant has directly infringed and continues to infringe the ’581  
17 Patent, for example, by making, selling, offering for sale, and/or importing the  
18 Accused Instrumentalities, and through its own use and testing of the Accused  
19 Instrumentalities. Defendant uses the Accused Instrumentalities for its own internal  
20 non-testing business purposes, while testing the Accused Instrumentalities, and  
21 while providing technical support and repair services for the Accused  
22 Instrumentalities to its customers.

23 8. For example, the Accused Instrumentalities infringe Claim 1 of the ’581  
24 Patent. One non-limiting example of the Accused Instrumentalities’ infringement is  
25 presented in the following paragraphs.

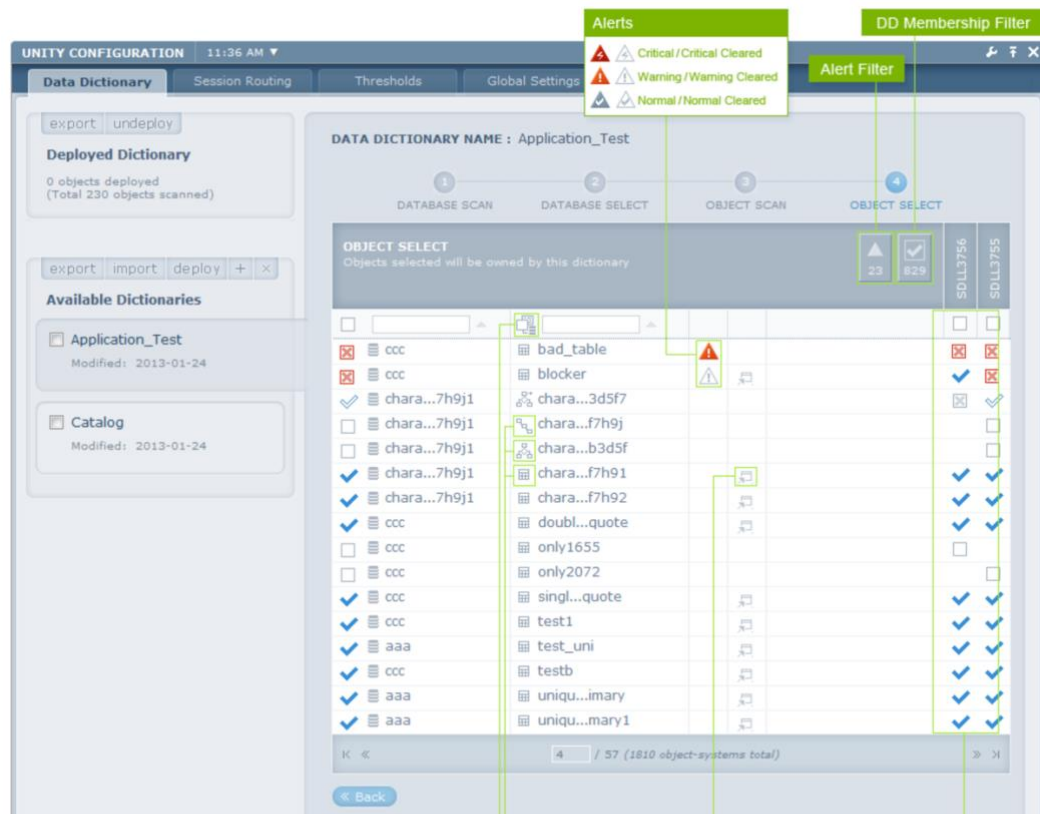

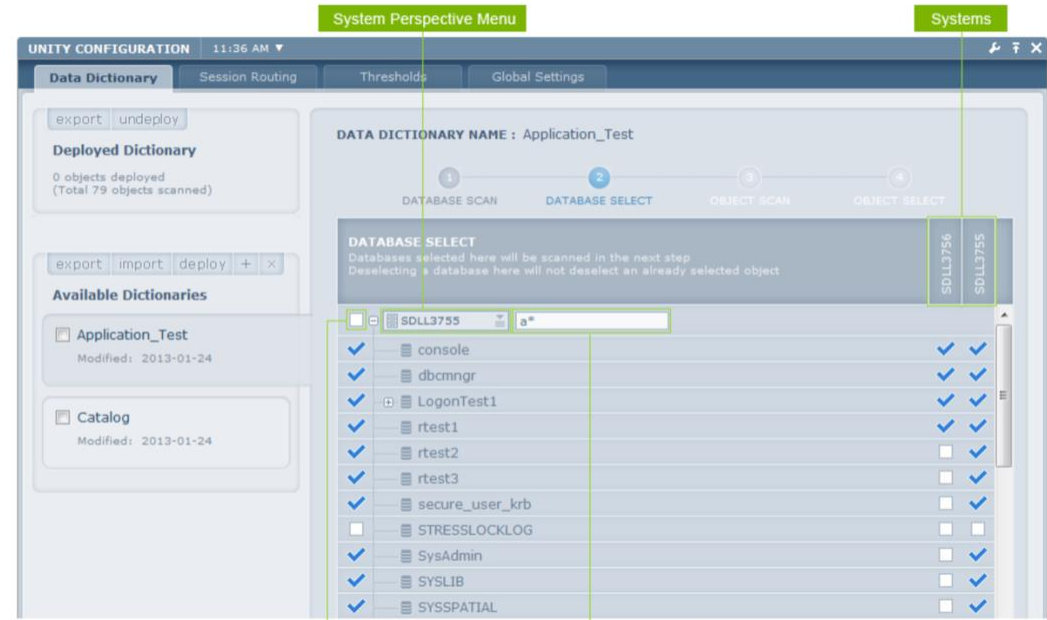

26 9. The Accused Instrumentalities include “[a] communication apparatus.”  
27 For example, the Accused Instrumentalities communicate data stored on one device  
28 (e.g. a device running Unity, Unity Director, Unity Loader, Teradata Bulk Transfer,

1 Teradata Data Mover) to another device (e.g. a Teradata Database system). *See, e.g.,*  
 2 Teradata Unity Datasheet (EB7192.pdf), *available at*  
 3 <http://assets.teradata.com/resourceCenter/downloads/Datasheets/EB7192.pdf>  
 4 (“Another benefit of Teradata Unity is the capability to synchronize multiple  
 5 Teradata systems. The SQL Multicast feature delivers SQL commands to all  
 6 participating systems in the Teradata Analytical Ecosystem. Teradata Unity will  
 7 automatically queue up and dispatch the incoming SQL commands in the order in  
 8 which they’re received, maintaining consistency and integrity across systems.”);

27  
28

1           10. The Accused Instrumentalities include “a storage unit configured to  
2 store content data to a storage medium.” For example, the Accused Instrumentalities  
3 include disk drives and/or solid state disks, which are necessary for the operation of  
4 the Accused Instrumentalities. *See, e.g.*, Teradata Managed Server for Cabinet and  
5 Server Models 4X5, 4X7, and 6X7 Product and Site Preparation Guide, *available at*  
6 [https://docs.teradata.com/reader/DdAmXXaBagDQwtH6uaApUg/ce~Xolu7GagxH](https://docs.teradata.com/reader/DdAmXXaBagDQwtH6uaApUg/ce~Xolu7GagxHN5mOr4eRQ)  
7 [N5mOr4eRQ](https://docs.teradata.com/reader/DdAmXXaBagDQwtH6uaApUg/ce~Xolu7GagxHN5mOr4eRQ) (“The following table outlines the features of the Teradata Managed  
8 Server 687 Unity models. \*\*\* Disk drives: Six 3.5-inch 450 GB or 600 GB SAS  
9 15K RPM hard drives”); Teradata Unity User Guide, Release 15.10 (2520-  
10 066K.pdf) (“Unity supports different sized Teradata systems that load at different  
11 rates and minimizes impact on the Bulk Load client when a system is offline. Unity  
12 manages an internal disk array to accommodate the disk space requirements for  
13 landing data before loading the data to Teradata systems. Data is landed to disk for  
14 any of the following reasons: • Data cannot be loaded to one or more of the target  
15 systems due to target, error, or restart tables in the Interrupted state or an unavailable  
16 target system. • A data checkpoint did not occur on all systems, and there is  
17 insufficient memory to store the data in memory. • A data checkpoint is successful  
18 on one system, but not on the others. Unity deletes landed data stored on the disk  
19 array after the data successfully loads to the Teradata systems, and the begin loading  
20 record of the Bulk Load job is overwritten in the Recovery Log. Management of the  
21 disk space by Unity reduces the total amount of disk space required for the load  
22 files.”).

23           11. The Accused Instrumentalities further include “a communication unit  
24 configured to communicate with an external apparatus.” For example, the Accused  
25 Instrumentalities communicate with external Teradata database servers. *See, e.g.*,  
26 EB7192.pdf (“Another benefit of Teradata Unity is the capability to synchronize  
27 multiple Teradata systems. The SQL Multicast feature delivers SQL commands to  
28 all participating systems in the Teradata Analytical Ecosystem. Teradata Unity will

1 automatically queue up and dispatch the incoming SQL commands in the order in  
 2 which they're received, maintaining consistency and integrity across systems.”); *id.*:

12 12. The Accused Instrumentalities further include “a controller configured  
 13 to edit a list so that content data is registered in the list.” For example, the Accused  
 14 Instrumentalities register database writes in the Recovery Log and edits a list of

RUSS, AUGUST & KABAT

1 writes to send to individual Teradata database systems based on, *e.g.*, managed  
2 routing rules. *See, e.g.*, 2520-066K.pdf:

### 3 **Examples of Managed Routing Behavior**

4 User mappings and routing rules define how session routing occurs based on its logon  
5 properties. This table shows examples of managed routing rules and how different rules  
6 determine different session routing strategies.

7 <b>Routing Rule</b>	<b>Read System</b>	<b>Read</b>	<b>Write System</b>	<b>Create Write</b>	<b>Error Profile</b>
8 RoutingA	TD1	Preferred			DefaultProfile
9 RoutingB	TD1, TD2	Preferred	TD1, TD2, TD3	None	DefaultProfile
10 RoutingC	TD1, TD2	Default	TD1, TD2, TD3	None	DefaultProfile
11 RoutingD	TD3, TD1	Preferred	TD3, TD1	Preferred	DefaultProfile
12 RoutingE	TD1, TD2, TD3	Default	TD1, TD2, TD3	Balanced	DefaultProfile
DefaultRouting		Default		None	DefaultProfile

13 RoutingA describes a Read-only rule with Preferred routing to a single system. A session is  
14 only created on system TD1. All Read requests are sent to system TD1, and Write requests  
15 are rejected. A TD1 system failure will return an error to the client. Any errors classified as  
16 RESUBMIT will be returned as errors to the client.

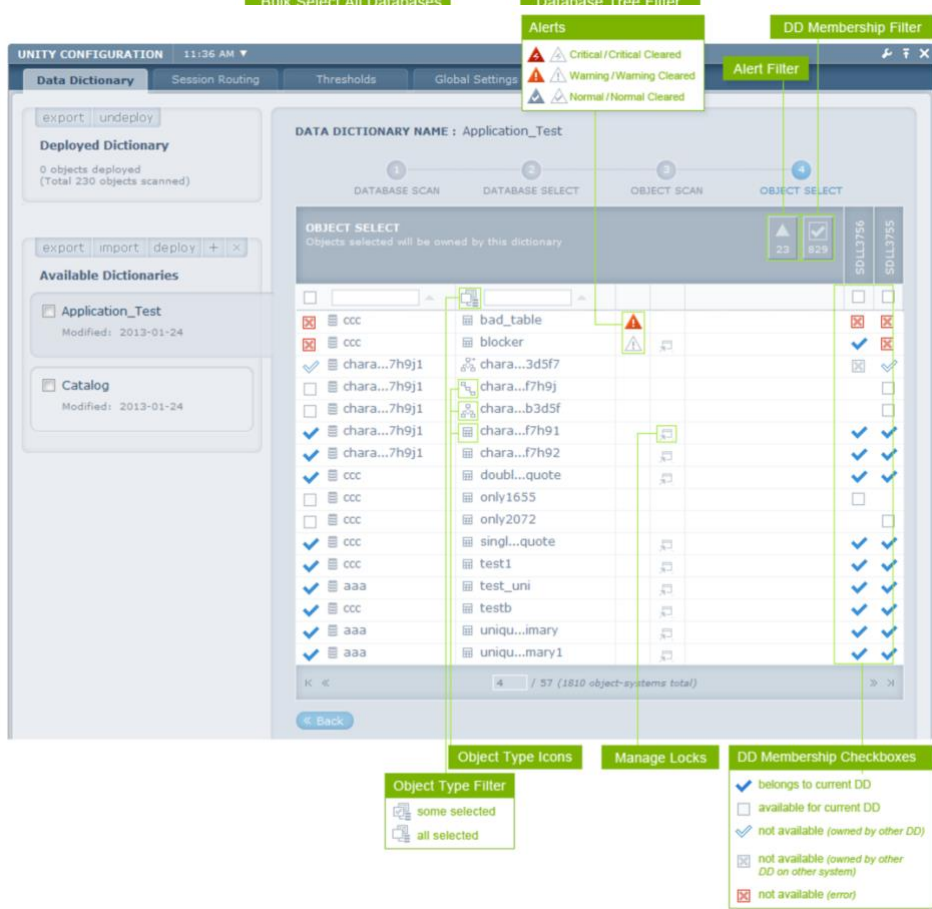

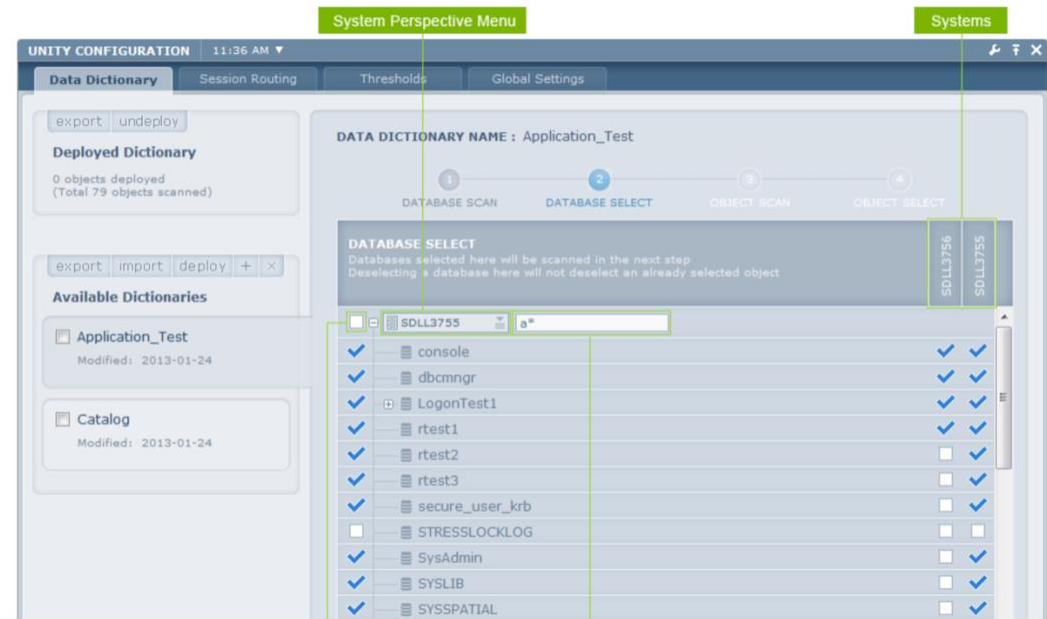

17 RoutingB describes a Read/Write rule with Read routing to Preferred systems TD1, TD2  
18 using Write systems TD1, TD2, and TD3. Sessions are created on TD1, TD2, and TD3. All  
19 Read requests are routed to TD1, and only if needed to TD2. Write requests are sent to TD1,  
20 TD2, and TD3 depending on which system the data objects reside.

21 RoutingC describes a Read/Write rule with Default routing. Routing C is identical to Routing  
22 B except that it uses automated routing and distributes Reads to both TD1 and TD2 using the  
23 shortest queue algorithm to balance the workload.

25  
26  
27  
28

13. The Accused Instrumentalities further include a controller configured “to uniquely associate the list with the external apparatus using a unique identification of the external apparatus.” For example, the Accused Instrumentalities identify a unique list of data to be transferred to an external database system using a unique identifier called a TDPID. *See, e.g., 2520-066K.pdf* (“DICTIONARY SET PREFERRED: Purpose: Sets the Preferred Write system to the Teradata Database system identified by the TDPID value. To set the Preferred Write system for all tables in a database, specify only the name of the database. To set the Preferred Write system for a single table, specify both the database name and the table name. \*\*\* tdpid: Unique identifier (TDPID) of a Teradata Database system.”); *EB7192.pdf* (“Taken together, the data loading and query management work as one to sequence database changes and query requests. This ensures that data updates and database structure changes are always applied in the order received; automatically coordinating and maintaining order and consistency across systems. And, it is specifically designed to work with systems that are not identical. For example, if the primary integrated data warehouse contains 100 percent of the data, and there is a second system for high availability that holds a 30 percent subset of that data,

1 Teradata Unity understands the capabilities and limitations of each system and will  
 2 route data loads accordingly.”); *id.*:

### 3 **Examples of Managed Routing Behavior**

4 User mappings and routing rules define how session routing occurs based on its logon  
 5 properties. This table shows examples of managed routing rules and how different rules  
 determine different session routing strategies.

6 <b>Routing Rule</b>	<b>Read System</b>	<b>Read</b>	<b>Write System</b>	<b>Create Write</b>	<b>Error Profile</b>
7 RoutingA	TD1	Preferred			DefaultProfile
8 RoutingB	TD1, TD2	Preferred	TD1, TD2, TD3	None	DefaultProfile
9 RoutingC	TD1, TD2	Default	TD1, TD2, TD3	None	DefaultProfile
10 RoutingD	TD3, TD1	Preferred	TD3, TD1	Preferred	DefaultProfile
11 RoutingE	TD1, TD2, TD3	Default	TD1, TD2, TD3	Balanced	DefaultProfile
12 DefaultRouting		Default		None	DefaultProfile

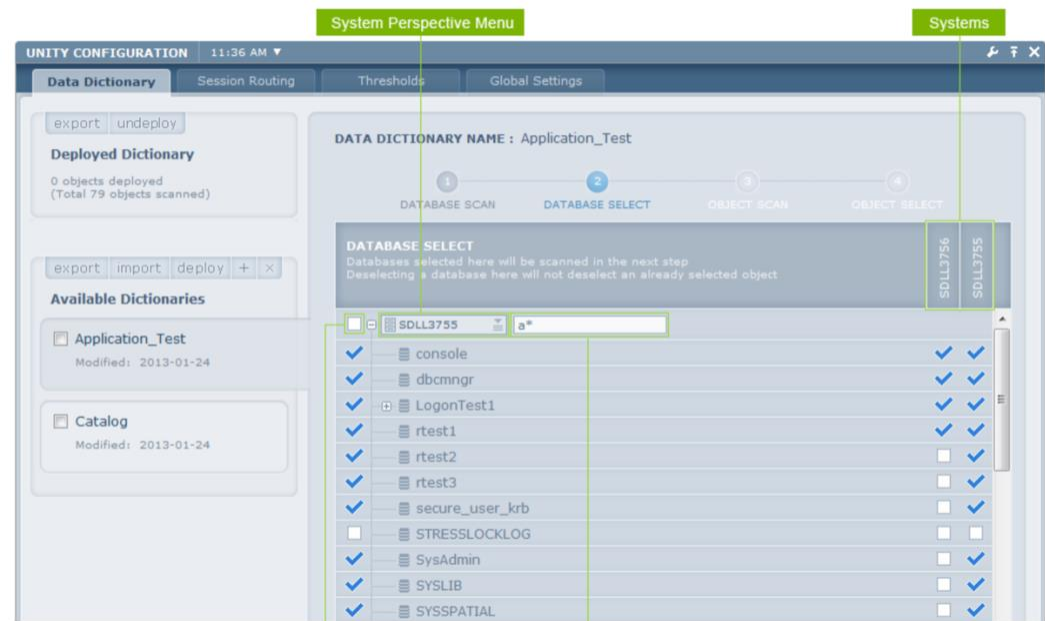

13 RoutingA describes a Read-only rule with Preferred routing to a single system. A session is  
 14 only created on system TD1. All Read requests are sent to system TD1, and Write requests  
 are rejected. A TD1 system failure will return an error to the client. Any errors classified as  
 RESUBMIT will be returned as errors to the client.

15 RoutingB describes a Read/Write rule with Read routing to Preferred systems TD1, TD2  
 16 using Write systems TD1, TD2, and TD3. Sessions are created on TD1, TD2, and TD3. All  
 17 Read requests are routed to TD1, and only if needed to TD2. Write requests are sent to TD1,  
 TD2, and TD3 depending on which system the data objects reside.

18 RoutingC describes a Read/Write rule with Default routing. Routing C is identical to Routing  
 19 B except that it uses automated routing and distributes Reads to both TD1 and TD2 using the  
 shortest queue algorithm to balance the workload.

See also <http://downloads.teradata.com/uda/articles/unity-director-initial-configuration-and-setup>:

b. Select databases used in the application:

RUSS, AUGUST & KABAT

1           14. The Accused Instrumentalities further include a controller configured  
 2 “to extract the list associated with the external apparatus from a plurality of lists in  
 3 the communication apparatus when the external apparatus is connected to the  
 4 communication apparatus, and to control transferring of content data registered in  
 5 the extracted list to the external apparatus.” For example, the Accused  
 6 Instrumentalities use the uniquely identified list associated with the external  
 7 Teradata database server to identify content data, e.g. SQL statements, to be  
 8 transferred to the apparatus, as described above. Furthermore, the Accused  
 9 Instrumentalities transfers data only when the database is in “Active” or “Read-  
 10 Only” state, *i.e.* connected, and not when the external apparatus is in “Disconnected”  
 11 state. *See, e.g., 2520-066K.pdf:*

12           **Read and Write Requests for Managed Sessions**

13           The following table shows when SQL statements are allowed depending on the Teradata  
 14 Database or table state.

15           Teradata Database or Table State	16           Read Requests	17           Write Requests
18           Active	19           Yes	20           Yes
21           Read-Only	22           Yes	23           No
24           Standby	25           No (as long as there is another Active copy of the table or system)	26           No
27           Out-of-Service	28           No	No
Disconnected	No	No
Interrupted	No	No
Restore	No	No
Unrecoverable	No	No

15           15. Defendant has had knowledge of the '581 Patent and its infringement  
 16 since at least the filing of the original Complaint in this action, or shortly thereafter,  
 17 including by way of this lawsuit. By the time of trial, Defendant will have known  
 18 and intended (since receiving such notice) that its continued actions would actively  
 19 induce and contribute to the infringement of the claims of the '581 Patent.  
 20

1           16. Defendant's affirmative acts of making, using, selling, offering for sale,  
2 and/or importing the Accused Instrumentalities have induced and continue to induce  
3 users of the Accused Instrumentalities to use the Accused Instrumentalities in their  
4 normal and customary way to infringe the claims of the '581 Patent. Use of the  
5 Accused Instrumentalities in their ordinary and customary fashion results in  
6 infringement of the claims of the '581 Patent.

7           17. For example, Defendant explains to customers the benefits of using the  
8 Accused Instrumentalities, such as by touting their advantages of data backup or  
9 synchronization using the accused functionalities. Defendant also induces its  
10 customers to use the Accused Instrumentalities to infringe other claims of the '581  
11 Patent. Defendant specifically intended and was aware that the normal and  
12 customary use of the Accused Instrumentalities on compatible systems would  
13 infringe the '581 Patent. Defendant performed the acts that constitute induced  
14 infringement, and would induce actual infringement, with the knowledge of the '581  
15 Patent and with the knowledge, or willful blindness to the probability, that the  
16 induced acts would constitute infringement. On information and belief, Defendant  
17 engaged in such inducement to promote the sales of the Accused Instrumentalities,  
18 *e.g.*, through its user manuals, product support, marketing materials, demonstrations,  
19 installation support, and training materials to actively induce the users of the accused  
20 products to infringe the '581 Patent. Accordingly, Defendant has induced and  
21 continues to induce end users of the accused products to use the accused products in  
22 their ordinary and customary way with compatible systems to make and/or use  
23 systems infringing the '581 Patent, knowing that such use of the Accused  
24 Instrumentalities with compatible systems will result in infringement of the '581  
25 Patent. Accordingly, Defendant has been (since at least as of filing of the original  
26 complaint), and currently is, inducing infringement of the '581 Patent, in violation  
27 of 35 U.S.C. § 271(b).

RUSS, AUGUST &amp; KABAT

1 8-81X and Expansion Server Model 8-81XE, Unity Source Link Server, Teradata  
2 Managed Server Unity Data Mover, and all versions and variations thereof since the  
3 issuance of the '929 Patent (“Accused Instrumentalities”).

4 22. Defendant has directly infringed and continues to infringe the '929  
5 Patent, for example, by making, selling, offering for sale, and/or importing the  
6 Accused Instrumentalities, and through its own use and testing of the Accused  
7 Instrumentalities. Defendant uses the Accused Instrumentalities for its own internal  
8 non-testing business purposes, while testing the Accused Instrumentalities, and  
9 while providing technical support and repair services for the Accused  
10 Instrumentalities to Defendant’s customers.

11 23. For example, the Accused Instrumentalities infringe Claim 1 of the '929  
12 Patent. One non-limiting example of the Accused Instrumentalities’ infringement is  
13 presented in the following paragraphs.

14 24. The Accused Instrumentalities include “[a] communication system  
15 including a first apparatus having a first storage medium, and a second apparatus.”  
16 For example, the Accused Instrumentalities communicate data stored on one device  
17 (e.g. a device running Unity, Unity Director, Unity Loader, Teradata Bulk Transfer,  
18 Teradata Data Mover) to another device with a storage medium (e.g. a Teradata  
19 Database system). *See, e.g.*, Teradata Unity Datasheet (EB7192.pdf), *available at*  
20 <http://assets.teradata.com/resourceCenter/downloads/Datasheets/EB7192.pdf>  
21 (“Another benefit of Teradata Unity is the capability to synchronize multiple  
22 Teradata systems. The SQL Multicast feature delivers SQL commands to all  
23 participating systems in the Teradata Analytical Ecosystem. Teradata Unity will  
24 automatically queue up and dispatch the incoming SQL commands in the order in  
25 which they’re received, maintaining consistency and integrity across systems.”);

1 “Active” or “Read-Only” state, *i.e.* connected, and not when the Teradata Database  
2 is in “Disconnected” state. *See, e.g., 2520-066K.pdf:*

3 **Read and Write Requests for Managed Sessions**

4 The following table shows when SQL statements are allowed depending on the Teradata  
5 Database or table state.

6 Teradata Database or Table State	7 Read Requests	8 Write Requests
9 Active	10 Yes	11 Yes
12 Read-Only	13 Yes	14 No
15 Standby	16 No (as long as there is another Active copy of the table or system)	17 No
18 Out-of-Service	19 No	20 No
21 Disconnected	22 No	23 No
24 Interrupted	25 No	26 No
27 Restore	28 No	No
Unrecoverable	No	No

28. The Accused Instrumentalities include a second apparatus comprising  
“an editor configured to select certain data to be transferred and to edit said  
management information based on said selection without regard to the connection  
of said first apparatus.” For example, the Accused Instrumentalities include an editor  
to select data to send to individual Teradata database systems based on, *e.g.*,  
managed routing rules, and edits management information based on the selection.  
This editing is done without regard to the connection between the Accused  
Instrumentalities and the target database system, *e.g.*, when the Accused

1 Instrumentalities receive commands to create or drop tables using SQL Data  
2 Definition Language. *See, e.g., 2520-066K.pdf:*

### 3 **Examples of Managed Routing Behavior**

4 User mappings and routing rules define how session routing occurs based on its logon  
5 properties. This table shows examples of managed routing rules and how different rules  
6 determine different session routing strategies.

7 <b>Routing Rule</b>	<b>Read System</b>	<b>Read</b>	<b>Write System</b>	<b>Create Write</b>	<b>Error Profile</b>
8 RoutingA	TD1	Preferred			DefaultProfile
9 RoutingB	TD1, TD2	Preferred	TD1, TD2, TD3	None	DefaultProfile
10 RoutingC	TD1, TD2	Default	TD1, TD2, TD3	None	DefaultProfile
11 RoutingD	TD3, TD1	Preferred	TD3, TD1	Preferred	DefaultProfile
12 RoutingE	TD1, TD2, TD3	Default	TD1, TD2, TD3	Balanced	DefaultProfile
DefaultRouting		Default		None	DefaultProfile

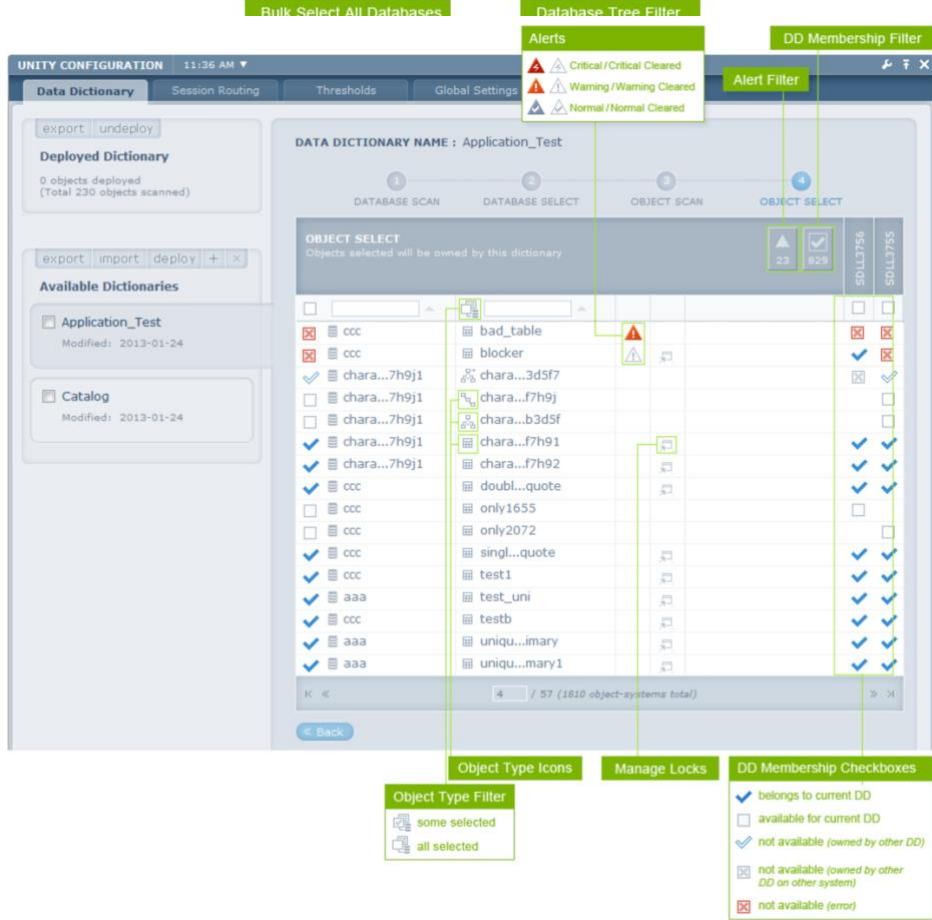

13 RoutingA describes a Read-only rule with Preferred routing to a single system. A session is  
14 only created on system TD1. All Read requests are sent to system TD1, and Write requests  
15 are rejected. A TD1 system failure will return an error to the client. Any errors classified as  
RESUBMIT will be returned as errors to the client.

16 RoutingB describes a Read/Write rule with Read routing to Preferred systems TD1, TD2  
17 using Write systems TD1, TD2, and TD3. Sessions are created on TD1, TD2, and TD3. All  
Read requests are routed to TD1, and only if needed to TD2. Write requests are sent to TD1,  
TD2, and TD3 depending on which system the data objects reside.

18 RoutingC describes a Read/Write rule with Default routing. Routing C is identical to Routing  
19 B except that it uses automated routing and distributes Reads to both TD1 and TD2 using the  
shortest queue algorithm to balance the workload.

 2 [catalog-deploy-examples:](http://developer.teradata.com/uda/articles/unity-13-10-foundation-catalog-deploy-examples)

### 3 **Dynamic catalog creation**

4 Dynamically deploying additional objects for Teradata Unity to manage into an existing user or  
 5 database can be accomplished by executing DDL directly through Teradata Unity. In the final video  
 6 clip I will run a bteq script which creates hundreds of tables, views, and macros. Most likely you will  
 7 want to use your existing ant build scripts to dynamically create objects as you migrate from your  
 8 development and test environments to production.

9 **Note:** Any DDL change requires a Dictionary rescan, *unless* the change is one of the  
 10 following:

- 11 • create/drop table
- 12 • create/drop view
- 13 • create/drop macro

14 See also [https://developer.teradata.com/uda/articles/stay-in-sync-](https://developer.teradata.com/uda/articles/stay-in-sync-introducing-teradata-unity-13-10)  
 15 [introducing-teradata-unity-13-10:](https://developer.teradata.com/uda/articles/stay-in-sync-introducing-teradata-unity-13-10)

### 16 **Data Synchronization -**

17 Teradata Unity provides data synchronization through a mechanism called SQL Multicast. The SQL  
 18 Multicast function will apply writes to all systems that are under Unity control keeping them all in  
 19 sync. This is not change data capture or a table copy! This is an approach where SQL statements  
 20 are applied to multiple target systems, based on location of the SQL objects. With Unity, there is no  
 21 concept of Primary/Secondary rather all systems are considered peers. In the event of an outage,  
 22 Unity will automatically route users and applications to the next available system. Reads and writes  
 23 will continue to go to the available system and all writes will be logged in the Unity Recovery Log.  
 24 Upon both systems becoming available, Unity will apply all the writes in the Recovery Log in the  
 25 same order and operation as they were applied to the available system keeping all systems in sync.  
 26 The approach makes any outage completely transparent to the user or application. Failover is  
 27 handled automatically.

28 Unity allows for data synchronization across multiple systems for both planned and unplanned  
 events. This creates the opportunity to perform rolling upgrades with no interruption to users or  
 applications.

Finally, Unity will synchronize any changes to a given table with that same table in other Teradata  
 systems under Unity control. In other words, if the Sales table exists in system A, B and C, a change  
 to the sales table in System A will be automatically applied to Systems B and C as well. This  
 synchronization includes DDL, DML, and DCL.

1 See also, e.g., <https://developer.teradata.com/general/articles/multi-active->  
2 [systems-with-new-unity-directorloader-14-11](https://developer.teradata.com/general/articles/multi-active-systems-with-new-unity-directorloader-14-11):

3 Within the Unity Director/Loader TMS a recovery log is maintained. That means all writes to System A  
4 and System B are recorded within the Unity Director and Unity Loader TMS. If System A were to go  
5 off-line for either planned or unplanned downtime, Unity Director/Loader will remember all of the  
6 writes that happened while System A was off-line. When System A comes back up they are replayed  
in the same order until System A gets back in synch with System B and then workload can be  
distributed between the two systems.

7 29. The Accused Instrumentalities include a second apparatus comprising  
8 “a controller configured to control transfer of the selected data stored in said second  
9 apparatus to said first apparatus via said communicator based on said management  
10 information edited by said editor when said detector detects that said first apparatus  
11 and said second apparatus are connected.” For example, the Accused  
12 Instrumentalities transmits data to the Teradata Database server to an external  
13 database system that is identified, when it is connected by a unique identifier called  
14 a TDPID, and the Accused Instrumentalities controls what data to transmit based on,  
15 e.g., managed routing rules, and edits management information based on the  
16 selection. See, e.g., 2520-066K.pdf (“DICTIONARY SET PREFERRED: Purpose:  
17 Sets the Preferred Write system to the Teradata Database system identified by the  
18 TDPID value. To set the Preferred Write system for all tables in a database, specify  
19 only the name of the database. To set the Preferred Write system for a single table,  
20 specify both the database name and the table name. \*\*\* tdpid: Unique identifier  
21 (TDPID) of a Teradata Database system.”); EB7192.pdf (“Taken together, the data  
22 loading and query management work as one to sequence database changes and query  
23 requests. This ensures that data updates and database structure changes are always  
24 applied in the order received; automatically coordinating and maintaining order and  
25 consistency across systems. And, it is specifically designed to work with systems  
26 that are not identical. For example, if the primary integrated data warehouse contains  
27 100 percent of the data, and there is a second system for high availability that holds  
28

1 a 30 percent subset of that data, Teradata Unity understands the capabilities and  
 2 limitations of each system and will route data loads accordingly.”); *id.*:

### 3 **Examples of Managed Routing Behavior**

4 User mappings and routing rules define how session routing occurs based on its logon  
 5 properties. This table shows examples of managed routing rules and how different rules  
 determine different session routing strategies.

6 <b>Routing Rule</b>	<b>Read System</b>	<b>Read</b>	<b>Write System</b>	<b>Create Write</b>	<b>Error Profile</b>
7 RoutingA	TD1	Preferred			DefaultProfile
8 RoutingB	TD1, TD2	Preferred	TD1, TD2, TD3	None	DefaultProfile
9 RoutingC	TD1, TD2	Default	TD1, TD2, TD3	None	DefaultProfile
10 RoutingD	TD3, TD1	Preferred	TD3, TD1	Preferred	DefaultProfile
11 RoutingE	TD1, TD2, TD3	Default	TD1, TD2, TD3	Balanced	DefaultProfile
12 DefaultRouting		Default		None	DefaultProfile

13 RoutingA describes a Read-only rule with Preferred routing to a single system. A session is  
 14 only created on system TD1. All Read requests are sent to system TD1, and Write requests  
 are rejected. A TD1 system failure will return an error to the client. Any errors classified as  
 RESUBMIT will be returned as errors to the client.

15 RoutingB describes a Read/Write rule with Read routing to Preferred systems TD1, TD2  
 16 using Write systems TD1, TD2, and TD3. Sessions are created on TD1, TD2, and TD3. All  
 17 Read requests are routed to TD1, and only if needed to TD2. Write requests are sent to TD1,  
 TD2, and TD3 depending on which system the data objects reside.

18 RoutingC describes a Read/Write rule with Default routing. Routing C is identical to Routing  
 19 B except that it uses automated routing and distributes Reads to both TD1 and TD2 using the  
 shortest queue algorithm to balance the workload.

RUSS, AUGUST & KABAT

1 See also, e.g., [https://developer.teradata.com/general/articles/multi-active-](https://developer.teradata.com/general/articles/multi-active-systems-with-new-unity-directorloader-14-11)  
 2 [systems-with-new-unity-directorloader-14-11](https://developer.teradata.com/general/articles/multi-active-systems-with-new-unity-directorloader-14-11):

3 Unity Director/Loader can be used to keep two Teradata systems in synch in either a dual active or  
 4 active/DR configuration.

5  
 6 Within the Unity Director/Loader TMS a recovery log is maintained. That means all writes to System A  
 7 and System B are recorded within the Unity Director and Unity Loader TMS. If System A were to go  
 8 off-line for either planned or unplanned downtime, Unity Director/Loader will remember all of the  
 9 writes that happened while System A was off-line. When System A comes back up they are replayed  
 in the same order until System A gets back in synch with System B and then workload can be  
 distributed between the two systems.

10 30. The Accused Instrumentalities include a second apparatus “wherein  
 11 said controller is configured to compare said management information edited by said  
 12 editor with management information of data stored in said first storage medium and  
 13 to transmit data in said second apparatus based on result of the comparison.” For  
 14 example, the Accused Instrumentalities provide a mechanism to manage ‘Data  
 15 Dictionaries’ that define what data/tables should be synced to a given database  
 16 server. See, e.g., Teradata Unity User Guide, Release 15.10 (2520-066K.pdf):

17 **Unity Data Dictionaries**

18 Unity uses Data Dictionaries in managed session routing. Unity uses Data Dictionaries to  
 19 apply locking rules for routing client requests. You define Teradata Database objects and  
 databases to manage with a Unity Data Dictionary.

20 To optimize database object management and session routing across Teradata systems, you  
 21 can create separate Unity Data Dictionaries for each client application and deploy these as  
 needed on each Unity server that manages the client application.

22 You can also change the duration of Data Dictionary editing locks. To modify the time, see  
[Global Settings Tab](#).

23 31. Defendant has had knowledge of the ’929 Patent and its infringement  
 24 since at least the filing of the original Complaint in this action, or shortly thereafter,  
 25 including by way of this lawsuit. By the time of trial, Defendant will have known  
 26 and intended (since receiving such notice) that its continued actions would actively  
 27 induce and contribute to the infringement of the claims of the ’929 Patent.  
 28

1           32. Defendant's affirmative acts of making, using, selling, offering for sale,  
2 and/or importing the Accused Instrumentalities have induced and continue to induce  
3 users of the Accused Instrumentalities to use the Accused Instrumentalities in their  
4 normal and customary way to infringe the claims of the '929 Patent. Use of the  
5 Accused Instrumentalities in their ordinary and customary fashion results in  
6 infringement of the claims of the '929 Patent.

7           33. For example, Defendant explains to customers the benefits of using the  
8 Accused Instrumentalities, such as by touting their advantages of synchronizing  
9 settings among multiple devices. Defendant also induces its customers to use the  
10 Accused Instrumentalities to infringe other claims of the '929 Patent. Defendant  
11 specifically intended and was aware that the normal and customary use of the  
12 Accused Instrumentalities on compatible systems would infringe the '929 Patent.  
13 Defendant performed the acts that constitute induced infringement, and would  
14 induce actual infringement, with the knowledge of the '929 Patent and with the  
15 knowledge, or willful blindness to the probability, that the induced acts would  
16 constitute infringement. On information and belief, Defendant engaged in such  
17 inducement to promote the sales of the Accused Instrumentalities, e.g., through its  
18 user manuals, product support, marketing materials, demonstrations, installation  
19 support, and training materials to actively induce the users of the accused products  
20 to infringe the '929 Patent. Accordingly, Defendant has induced and continues to  
21 induce end users of the accused products to use the accused products in their ordinary  
22 and customary way with compatible systems to make and/or use systems infringing  
23 the '929 Patent, knowing that such use of the Accused Instrumentalities with  
24 compatible systems will result in infringement of the '929 Patent. Accordingly,  
25 Defendant has been (since at least as of filing of the original complaint), and  
26 currently is, inducing infringement of the '929 Patent, in violation of 35 U.S.C. §  
27 271(b).  
28

1           34. Defendant has also infringed, and continues to infringe, claims of the  
2 '929 Patent by offering to commercially distribute, commercially distributing,  
3 making, and/or importing the Accused Instrumentalities, which are used in  
4 practicing the process, or using the systems, of the '929 Patent, and constitute a  
5 material part of the invention. Defendant knows the components in the Accused  
6 Instrumentalities to be especially made or especially adapted for use in infringement  
7 of the '929 Patent, not a staple article, and not a commodity of commerce suitable  
8 for substantial noninfringing use. For example, the ordinary way of using the  
9 Accused Instrumentalities infringes the patent claims, and as such, is especially  
10 adapted for use in infringement. Accordingly, Defendant has been, and currently is,  
11 contributorily infringing the '929 Patent, in violation of 35 U.S.C. § 271(c).

12           35. For similar reasons, Defendant also infringes the '929 Patent by  
13 supplying or causing to be supplied in or from the United States all or a substantial  
14 portion of the components of the Accused Instrumentalities, where such components  
15 are uncombined in whole or in part, in such manner as to actively induce the  
16 combination of such components outside of the United States in a manner that would  
17 infringe the '929 Patent if such combination occurred within the United States. For  
18 example, Defendant supplies or causes to be supplied in or from the United States  
19 all or a substantial portion of the hardware (e.g., separate Teradata servers) and  
20 software (e.g., Teradata Unity software) components of the Accused  
21 Instrumentalities in such a manner as to actively induce the combination of such  
22 components (e.g., by instructing users to combine multiple Teradata servers into an  
23 infringing system) outside of the United States.

24           36. Defendants also indirectly infringe the '929 Patent by supplying or  
25 causing to be supplied in or from the United States components of the Accused  
26 Instrumentalities that are especially made or especially adapted for use in infringing  
27 the '929 Patent and are not a staple article or commodity of commerce suitable for  
28 substantial non-infringing use, and where such components are uncombined in

1 whole or in part, knowing that such components are so made or adapted and  
2 intending that such components are combined outside of the United States in a  
3 manner that would infringe the '929 Patent if such combination occurred within the  
4 United States. Because the Accused Instrumentalities are designed to operate as the  
5 claimed system and apparatus, the Accused Instrumentalities have no substantial  
6 non-infringing uses, and any other uses would be unusual, far-fetched, illusory,  
7 impractical, occasional, aberrant, or experimental. For example, Defendant supplies  
8 or causes to be supplied in or from the United States all or a substantial portion of  
9 the hardware (e.g., separate Teradata servers) and software (e.g., Teradata Unity  
10 software) components that are especially made or especially adapted for use in the  
11 Accused Instrumentalities, where such hardware and software components are not  
12 staple articles or commodities of commerce suitable for substantial noninfringing  
13 use, knowing that such components are so made or adapted and intending that such  
14 components are combined outside of the United States, as evidenced by Defendant's  
15 own actions or instructions to users in, e.g., combining multiple Teradata servers  
16 into infringing systems, and enabling and configuring the infringing functionalities  
17 of the Accused Instrumentalities.

18 37. As a result of Defendant's infringement of the '929 Patent, Plaintiff  
19 Data Scape is entitled to monetary damages in an amount adequate to compensate  
20 for Defendant's infringement, but in no event less than a reasonable royalty for the  
21 use made of the invention by Defendant, together with interest and costs as fixed by  
22 the Court.

### 23 **PRAYER FOR RELIEF**

24 WHEREFORE, Plaintiff Data Scape respectfully requests that this Court  
25 enter:

26 a. A judgment in favor of Plaintiff that Defendant has infringed, either  
27 literally and/or under the doctrine of equivalents, the '581 Patent and the '929 Patent,  
28 (collectively, "asserted patents");

RUSS, AUGUST & KABAT

b. A permanent injunction prohibiting Defendant from further acts of infringement of the asserted patents;

c. A judgment and order requiring Defendant to pay Plaintiff its damages, costs, expenses, and prejudgment and post-judgment interest for its infringement of the asserted patents, as provided under 35 U.S.C. § 284;

d. A judgment and order requiring Defendant to provide an accounting and to pay supplemental damages to Data Scape, including without limitation, prejudgment and post-judgment interest;

e. A judgment and order finding that this is an exceptional case within the meaning of 35 U.S.C. § 285 and awarding to Plaintiff its reasonable attorneys’ fees against Defendant; and

f. Any and all other relief as the Court may deem appropriate and just under the circumstances.

**DEMAND FOR JURY TRIAL**

Plaintiff, under Rule 38 of the Federal Rules of Civil Procedure, requests a trial by jury of any issues so triable by right.

Dated: February 11, 2019

Respectfully submitted,

/s/ Reza Mirzaie
