CONSOLIDATED TRANSACTION  
PROCESSING LLC,

Plaintiff,

v.

AMAZON.COM, INC.,

Defendant.

Civil Action No. \_\_\_\_\_

**JURY TRIAL DEMANDED**

**COMPLAINT FOR PATENT INFRINGEMENT**

Plaintiff Consolidated Transaction Processing LLC (“CTP” or “Plaintiff”), for its Complaint against Defendant Amazon.com, Inc., (referred to herein as “Amazon” or “Defendant”), alleges the following:

**NATURE OF THE ACTION**

1. This is an action for patent infringement arising under the Patent Laws of the United States, 35 U.S.C. § 1 *et seq.*

**THE PARTIES**

2. Plaintiff is a limited liability company organized under the laws of the State of Nevada with a place of business at 3107 Boardwalk, Atlantic City, NJ 08401.

3. Upon information and belief, Amazon is a corporation organized and existing under the laws of Delaware with a place of business at 410 Terry Ave. North, Seattle, WA 98109, and can be served through its registered agent, Corporation Service Company, 251 Little Falls Drive, Wilmington, DE 19808. Upon information and belief, Amazon sells, offers to sell, and/or uses products and services throughout the United States, including in this judicial district, and

introduces infringing products and services into the stream of commerce knowing that they would be sold and/or used in this judicial district and elsewhere in the United States.

### **JURISDICTION AND VENUE**

4. This is an action for patent infringement arising under the Patent Laws of the United States, Title 35 of the United States Code.

5. This Court has subject matter jurisdiction under 28 U.S.C. §§ 1331 and 1338(a).

6. Venue is proper in this judicial district under 28 U.S.C. §1400(b). On information and belief, Amazon is incorporated in the State of Delaware.

7. This Court has personal jurisdiction over Amazon under the laws of the State of Delaware, due at least to its substantial business in Delaware and in this judicial district, directly or through intermediaries, including: (i) at least a portion of the infringements alleged herein; and (ii) regularly doing or soliciting business, engaging in other persistent courses of conduct and/or deriving substantial revenue from goods and services provided to individuals in the State of Delaware. Further, this Court has personal jurisdiction and proper authority to exercise venue over Amazon because it is incorporated in Delaware and by doing so has purposely availed itself of the privileges and benefits of the laws of the States of Delaware.

### **BACKGROUND**

#### **The Inventions**

8. Robert S. Alvin is the inventor of U.S. Patent Nos. 8,374,956 (“the ’956 patent”), 8,533,047 (“the ’047 patent”), 8,775,255 (“the ’255 patent”), 8,712,846 (“the ’846 patent”), and 8,396,743 (“the ’743 patent”), together the “patents in suit.”

9. A true and correct copy of the ’956 patent is attached as Exhibit A.

10. A true and correct copy of the ’047 patent is attached as Exhibit B.

11. A true and correct copy of the ’255 patent is attached as Exhibit C.

12. A true and correct copy of the '846 patent is attached as Exhibit D.

13. A true and correct copy of the '743 patent is attached as Exhibit E.

14. The patents in suit resulted from the pioneering efforts of Mr. Alvin (hereinafter "the Inventor") in the area of electronic transaction processing over a communications network. These efforts resulted in the development of methods and apparatuses for internet transactions based on user-specific information and sending targeted product offerings based on personal information in the late 1990s. At the time of these pioneering efforts, most commercially available electronic commerce (e-commerce) technology used the Internet and web pages as an advertising medium to replace catalog or infomercial type advertising. Moreover, such e-commerce businesses operated by maintaining their own inventory in warehouses, leading to higher costs. The Inventor conceived of the inventions claimed in the patents in suit as a way to create a virtual store front acting as a warehouse for distributors to avoid maintaining physical stores and warehouses while maintaining such practices transparent to the customer. (See '956 patent at 2:60-66; 3:5-11; 3:39-45.)

15. For example, the Inventor developed methods and systems to obtain product data for a plurality of products from a plurality of distributors, dynamically generate electronic catalogs having user-specific product offerings based on customers' personal information, utilize multi-level fraud checking system to provide a higher level of risk management in accepting purchase orders for fulfillment, authorize distributors to ship products directly to customers, and automatically provide customers information about their orders. (See '956 patent at 3:39-67.)

**Advantage Over the Prior Art**

16. The patented inventions disclosed in the patents in suit provides many advantages over the prior art, and in particular improved the operations of business transactions conducted

over the Internet. *See* '956 patent at 1:14-16. One advantage of the patented inventions is creating a virtual store front functioning as a warehouse for inventory from a plurality of distributors, to avoid maintaining physical stores and warehouses. (*See* '956 patent at 3:39-45.)

17. Another advantage of the patented inventions is fully automated business transaction processing, including automatic generation of an electronic catalog, competitive pricing engine based on flexible rule-based algorithms, and automatic feedback to the customer. (*See* '956 patent at 3:63-67.)

18. Another advantage of the patented inventions a multi-level fraud checking system that incorporates proprietary as well as commercially available fraud checking systems, thereby providing a higher level of risk management. (*See* '956 patent at 3:57-62.)

19. Because of these significant advantages that can be achieved through the use of the patented invention, CTP believes that the patents in suit present significant commercial value for companies like Amazon. Indeed, business transactions over the Internet are more commonplace than ever, and with the number of merchants selling products online, it is crucial that businesses distinguish themselves by the extent of automation and user-specific customization they provide during the online shopping experience. These advantages are taught by the inventions of the patents in suit.

### **Technological Innovation**

20. The patented inventions disclosed in the patents in suit resolve technical problems related to Internet transactions based on user-specific information, particularly problems related to the utilization of product data from a plurality of distributors and personal information of customers in generating electronic catalogs of user-specific product offerings. As the patents in suit explain, one of the limitations of the prior art as regards electronic transaction processing

technology was that most e-commerce retail businesses still operated by maintaining an inventory in warehouses, as they used the Internet mainly as an advertising medium and to replace catalog or infomercial type advertising. (*See, e.g.*, '956 patent at 2:60-3:11.)

21. The claims of the patents in suit do not merely recite the performance of some well-known business practice from the pre-Internet world along with the requirement to perform it on the Internet. Instead, the claims of the patents in suit recite inventive concepts that are deeply rooted in computerized transaction processing, advertising, and product offering technology, and overcome problems specifically arising out of how to create targeted advertising by dynamically generating electronic catalogs from a plurality of products based on a user's personal information. The claims of the patents in suit further overcome problems specifically arising out of how to execute payment authorization and authorize distributor order execution, based on customer data, via a network and/or an internet website.

22. In addition, the claims of the patents in suit recite inventive concepts that improve the functioning of electronic catalogs and payment authorization systems used for electronic transaction processing, particularly as they recite the use of a user's personal information to dynamically generate user-specific product offerings, authorize distributors to ship products directly to the user following successful payment processing, and send automated messages to customers containing order information.

23. Moreover, the claims of the patents in suit recite inventive concepts that are not merely routine or conventional use of advertising, product offering, and transaction processing. Instead, the patented inventions disclosed in the patents in suit provide a new and novel solution to specific problems related to automating the process of targeted advertising, targeted product offering, and retail sales transaction processing by dynamically utilizing customer data and

product data. The claims of the patents in suit thus specify how customer data and product data are manipulated to yield a desired result.

24. And finally, the patented invention disclosed in the patents in suit does not preempt all the ways that user-specific information may be used to improve internet transactions, nor do the patents in suit preempt any other well-known or prior art technology.

25. Accordingly, the claims in the patents in suit recite a combination of elements sufficient to ensure that the claim in substance and in practice amounts to significantly more than a patent-ineligible abstract idea.

**COUNT I – INFRINGEMENT OF U.S. PATENT NO. 8,374,956**

26. The allegations set forth in the foregoing paragraphs 1 through 25 are incorporated into this First Claim for Relief.
