12 *Attorneys for Plaintiff*
 Express Mobile, Inc.

14 **UNITED STATES DISTRICT COURT**
 15 **NORTHERN DISTRICT OF CALIFORNIA**
 16 **SAN FRANCISCO DIVISION**

17 EXPRESS MOBILE, INC.,
 18 *Plaintiff,*
 19 v.
 20 SALESFORCE.COM, INC.,
 21 *Defendant.*

Case No. 3:20-cv-08461
COMPLAINT FOR PATENT
INFRINGEMENT
DEMAND FOR JURY TRIAL

1 **COMPLAINT FOR PATENT INFRINGEMENT**

2 Plaintiff Express Mobile, Inc. (“Express Mobile” or “Plaintiff”), by its attorneys,
3 demands a trial by jury on all issues so triable and for its Complaint against Salesforce.com, Inc.
4 (“Salesforce” or “Defendant”) alleges the following:

5 **NATURE OF THE ACTION**

6 1. This action arises under 35 U.S.C. § 271 for Salesforce’s infringement of
7 Express Mobile’s United States Patent Nos. 6,546,397 (“the ’397 patent”), 7,594,168
8 (“the ’168 patent”), 9,928,044 (“the ’044 patent”), 9,471,287 (“the ’287 patent”) and
9 9,063,755 (“the ’755 patent”).

10 **THE PARTIES**

11 2. Plaintiff Express Mobile, Inc. is an inventor-owned corporation organized under
12 the laws of the State of Delaware with a place of business at 38 Washington Street, Novato,
13 California 94947.

14 3. Upon information and belief, Salesforce.com, Inc. is a corporation organized and
15 existing under the laws of the State of Delaware, with a place of business at Salesforce Tower
16 415 Mission Street, 3rd Floor San Francisco, California 94105. Salesforce may be served
17 through its registered agent for service at CT Corporation System 818 West Seventh St., Suite
18 930 Los Angeles, California 90017.

19 4. Upon information and belief, Salesforce claims to be the world’s #1 customer
20 relationship management (CRM) platform. More than 150,000 companies use Salesforce CRM
21 to grow their businesses by strengthening customer relationships and better understanding their
22 customers’ needs by better managing customer information and interactions.

23 **JURISDICTION AND VENUE**

24 5. This Court has jurisdiction over the subject matter of this action pursuant to 28
25 U.S.C. §§ 1331 and 1338(a).

26 6. Upon information and belief, jurisdiction and venue for this action are proper in
27 the Northern District of California.
28

1 7. This Court has personal jurisdiction over Salesforce because Salesforce has
2 purposefully availed itself of the rights and benefits of the laws of this State and this Judicial
3 District. Upon information and belief, Salesforce resides in the Northern District of California
4 by maintaining a regular and established place of business at Salesforce Tower 415 Mission
5 Street, 3rd Floor San Francisco, California 94105.

6 8. This Court also has personal jurisdiction over Salesforce because Salesforce has
7 done and is doing substantial business in this Judicial District, both generally and, upon
8 information and belief, with respect to the allegations in this complaint, including Salesforce's
9 one or more acts of infringement in this Judicial District.

10 9. Venue is proper in this Judicial District under 28 U.S.C. §§ 1391(b) and (c) and §
11 1400(b). Salesforce has committed acts of infringement through, for example, performing a
12 method to allow users to produce Internet websites in the Northern District of California and has
13 a regular and established place of business in this District. Salesforce's office in San Francisco
14 is a physical place in the District, it is an established location where Salesforce's business has
15 been carried out for several years, and Salesforce publicly advertises its presence in the District.

INTRADISTRICT ASSIGNMENTS

17 10. Pursuant to Local Rule 3-2 (c), this case involves intellectual property rights and
18 is subject to assignment on a district wide basis.

PATENTS IN SUIT

19 11. Express Mobile is the lawful owner of all rights, title, and interest in the '397 patent
20 titled "Browser Based Web Site Generation Tool and Run Time Engine," including the right to
21 sue and to recover for infringement thereof. The '397 patent was duly and legally issued on April
22 8, 2003, naming Steven H. Rempell as the inventor. A true and correct copy of the '397 patent is
23 attached as Exhibit A.
24

25 12. The inventions of the '397 patent solve technical problems related to website
26 creation and generation. For example, the inventions enable the creation of websites through
27 browser-based visual editing tools such as selectable settings panels which describe website
28

1 elements, with one or more settings corresponding to commands. These features are exclusively
2 implemented utilizing computer technology including a virtual machine.

3 13. The claims of the '397 patent do not merely recite the performance of some pre-
4 Internet business practice on the Internet. Instead, the claims of the '397 patent recite inventive
5 concepts that are rooted in computerized website creation technology, and overcome problems
6 specifically arising in the realm of computerized website creation technologies.

7 14. The claims of the '397 patent recite inventions that are not merely the routine or
8 conventional use of website creation systems and methods. Instead, the inventions teach a
9 browser-based website creation system and method in which the user-selected settings
10 representing website elements are stored in a database, and in which said stored information is
11 retrieved to generate said website.

12 15. The technology claimed in the '397 patent does not preempt all ways of using
13 website or web page authoring tools nor any other well-known prior art technology.

14 16. Accordingly, each claim of the '397 patent recites a combination of elements
15 sufficient to ensure that the claim amounts to significantly more than a patent on an ineligible
16 concept.

17 17. Plaintiff is the lawful owner of all rights, title, and interest in United States Patent
18 No. 7,594,168 titled "Browser Based Web Site Generation Tool and Run Time Engine," including
19 the right to sue and to recover for infringement thereof. The '168 patent was duly and legally
20 issued on September 22, 2009, naming Steven H. Rempell as the inventor. A true and correct copy
21 of the '168 patent is attached as Exhibit B.

22 18. The inventions of the '168 patent solve technical problems related to website
23 creation and generation. For example, the inventions enable the creation of websites through
24 browser-based build tools and a user interface. The inventions greatly improve the productivity
25 of the designer utilizing an innovative implementation for styles. These features are implemented
26 utilizing computer technology.

27 19. The claims of the '168 patent do not merely recite the performance of some pre-
28 Internet business practice on the Internet. Instead, the claims of the '168 patent recite inventive

1 concepts that are rooted in computerized website creation technology and overcome problems
2 specifically arising in the realm of computerized website creation technologies.

3 20. The claims of the '168 patent recite inventions that are not merely the routine or
4 conventional use of website creation systems and methods. Instead, the inventions teach a
5 browser-based website creation system including a server comprising a build engine configured to
6 create and apply styles to, for example, a website with web pages comprised of objects.

7 21. The technology claimed in the '168 patent does not preempt all ways of using
8 website or webpage authoring tools nor any other well-known or prior art technology.

9 22. Accordingly, each claim of the '168 patent recites a combination of elements
10 sufficient to ensure that the claim amounts to significantly more than a patent on an ineligible
11 concept.

12 23. In *Express Mobile v. KTree Computer Solutions*, a case filed in the Eastern District
13 of Texas, the defendant, KTree Computer Solutions, brought a Motion for Judgment on the
14 Pleadings asserting that the '397 patent and the '168 patent is invalid as claiming abstract subject
15 matter under 35 U.S.C. § 101. (C.A. 2:17-00128; Dkt. 9, 17, 22-27). The briefing associated with
16 the motion is incorporated by reference into this Complaint.

17 24. After considering the respective pleadings, Magistrate Judge Payne recommended
18 denial of KTree's motion, without prejudice, holding that "the claims appear to address a problem
19 particular to the internet: dynamically generating websites and displaying web pages based on
20 stored user-selected settings" and further stating "the asserted claims do not bear all of the
21 hallmarks of claims that have been invalidated on the pleadings by other courts in the past. For
22 example, the claims are not merely do-it-on-a-computer claims." (Dkt. 29, attached as Exhibit C.)
23 No objection was filed to the Magistrate Judge's report and recommendation and the decision
24 therefore became final.

25 25. In *Express Mobile v. Pantheon Systems, Inc.*, a case filed in the Northern District
26 of California, the defendant, Pantheon Systems, Inc., brought a Motion to Dismiss Plaintiff's First
27 Amended Complaint asserting that the '397 patent and the '168 patent were directed to the abstract
28 idea of creating and displaying webpages based upon information from a user with no further

1 inventive concept and purportedly ineligible for patenting under 35 U.S.C. § 101. (Case No. 3:18-
2 CV-04688-RS; Dkt. 26, 32 and 34). The briefing associated with the motion is incorporated by
3 reference into this Complaint.

4 26. In *Express Mobile v. Code and Theory LLC*, a case filed in the Northern District of
5 California, the defendant, Code and Theory LLC, brought a Motion to Dismiss Plaintiff's
6 Complaint asserting that the '397 patent and the '168 patent are not subject matter eligible under
7 35 U.S.C. § 101 as a matter of law. (Case No. 3:18-CV-04679-RS; Dkt. 35, 40 and 41). The
8 briefing associated with the motion is incorporated by reference into this Complaint.

9 27. After a hearing and a consideration of the respective pleadings, Hon. Richard
10 Seeborg denied both motions holding that:

- 11 • “The patents here are directed at a purportedly revolutionary technological
12 solution to a technological problem—how to create webpages for the internet in a
13 manner that permits ‘what you see is what you get’ editing, and a number of other
14 alleged improvements over the then-existing methodologies.” *Id.* at 5.
- 15 • The claims of the '397 and '168 patents are “directed to a specific improvement to
16 the way computers operate,” and “it simply cannot be said on the present record
17 that the claims are drawn so broadly as to be divorced from the potentially patent-
18 eligible purported technological improvements described in the specification.” *Id.*
19 at 5-6. (Case No. 3:18-CV-04679-RS; Dkt.45; Case No. 3:18-CV-04688-RS
20 Dkt.40; attached as Exhibit D.)

21 28. In Case Nos. 1:18-CV-01173-RGA and 1:18-CV-01175-RGA, infringement
22 actions filed by Plaintiff in the District of Delaware, the respective defendants in those actions,
23 Dreamhost LLC and Hostway Services, Inc., brought Motions to Dismiss claims of the '397
24 and '168 patents on the basis of invalidity under 35 U.S.C. § 101. (Case No. 1:18-CV-01173-
25 RGA D.I. 14, D.I. 18-21 and 24 Case No. 1:18-CV-01175-RGA D.I. 17-19 and 23). The
26 briefing associated with the motion is incorporated by reference into this Complaint.

27 29. After consideration of the respective pleadings, Judge Andrews denied both
28 motions in a joint order, pointing to factual allegations of inventiveness identified by the

1 Plaintiff, and an expert declaration explaining inventiveness of the claims, noting that such
2 factual issues preclude a finding of invalidity on a motion to dismiss. (Case No. 1:18-CV-
3 01173-RGA D.I. 43; Case No. 1:18-CV-01175-RGA D.I. 42; attached as Exhibit E.)

4 30. Plaintiff is the lawful owner of all rights, title, and interest in United States Patent
5 No. 9,928,044 titled “Systems and Methods for Programming Mobile Devices,” including the
6 right to sue and to recover for infringement thereof. The ’044 patent was duly and legally issued
7 on March 27, 2018, naming Steven H. Rempell, David Chrobak and Ken Brown as the inventors.
8 A true and correct copy of the ’044 patent is attached as Exhibit F.

9 31. The inventions of the ’044 patent solve technical problems associated with
10 methods and systems for displaying content on displays of devices by providing more efficient
11 ways of generating, storing and retrieving code for displaying content, for example, dynamic
12 content, uniformly across different kinds of devices. For example, the inventions of the ’044
13 patent allow a data-efficient and flexible association between a symbolic name with a User
14 Interface (“UI”) object (e.g., a UI object for a widget) corresponding to a web component of a
15 web service, that is manually or automatically selected. The symbolic name has a data format
16 type corresponding to a subclass of UI objects that support the data format type of the symbolic
17 name and is only available to UI objects that support the data format of the symbolic name.
18 Information representative of the defined UI object can be stored in a database and subsequently
19 retrieved from the database to build an application consisting of at least a portion of the database
20 using a player, which uses the information to generate one or more web pages for display across
21 different kinds of devices (e.g., PC, mobile or tablet; or different browsers, operating systems
22 and applications, including for example both native and browser-based applications.)

23 32. The claims of the ’044 patent do not merely recite the performance of some pre-
24 Internet business practice on the Internet. Instead, the claims of the ’044 patent recite inventive
25 concepts that are rooted in the computerized, data-efficient definition, selection, storage and
26 generation of user defined object attributes (e.g., a UI object for a widget) on displays for
27 different types of devices, such as PC, mobile or tablet or different browsers, and applications.
28 Such features are specifically grounded in, and overcome problems with data efficiency and

1 flexibility specifically arising in, the realm of computerized content generation and display
2 technologies, and are not well-understood, routine and conventional elements.

3 33. For example, the claimed inventions of the '044 patent recite innovative, technical
4 improvements that select and associate symbolic names with defined UI objects (e.g., UI objects
5 for a widget) corresponding to web components of web services based on, for example, data
6 format type, storing information representative of such settings in a database, and building
7 applications, which together with players, generate uniform, data-efficient content, such as
8 dynamic content, for display across different types of devices.

9 34. The technology claimed in the '044 patent does not preempt all ways for the
10 computerized generation of code for a display of a device nor any other well-known or prior art
11 technology. For example, the specific, innovative technical improvements do not preempt well-
12 known methods of generating code for a display of a device by programming in HTML or
13 JavaScript code.

14 35. Accordingly, each claim of the '044 patent thus recites a combination of elements
15 sufficient to ensure that the claim amounts to significantly more than a patent on an ineligible
16 concept.

17 36. Plaintiff is the lawful owner of all rights, title, and interest in United States Patent
18 No. 9,471,287 titled "Systems and Methods for Integrating Widgets on Mobile Devices,"
19 including the right to sue and to recover for infringement thereof. The '287 patent was duly and
20 legally issued on October 18, 2016, naming Steven H. Rempell, David Chrobak and Ken Brown
21 as the inventors. A true and correct copy of the '287 patent is attached as Exhibit G.

22 37. The inventions of the '287 patent solve technical problems associated with
23 methods and systems for displaying content on displays of devices by providing more efficient
24 ways of generating code for uniformly displaying content, for example dynamic content, across
25 different kinds of devices. For example, the inventions of the '287 patent allow a data-efficient
26 and flexible association between a symbolic name and a UI object (e.g., a UI object for a widget)
27 corresponding to a web component of a web service, that is defined for presentation on a display
28 of a device. The defined UI object can be selected by a user of an authoring tool or

1 automatically selected by a system based on a web component selected by the user. Further, the
2 symbolic name has a data format type corresponding to a subclass of UI objects that support the
3 data format type of the symbolic name. A device-independent application including the
4 symbolic name is then produced and provided to the device together with a device-platform-
5 dependent player. Such operations provide a user-friendly platform allowing the UI object to be
6 efficiently defined and uniformly displayed across different kinds of devices (e.g., PC, mobile or
7 tablet; or different browsers, operating systems, and applications, including for example both
8 native and browser-based applications).

9 38. The claims of the '287 patent do not recite merely the performance of a known
10 business practice on the Internet. Instead, the claims of the '287 patent recite inventive concepts
11 grounded in the computerized, data-efficient definition and generation of object attributes (e.g., a
12 UI object for a widget) on displays for different types of devices, such as PC, tablet, or mobile
13 devices, or different browsers and applications. Such features are specifically grounded in, and
14 overcome problems with data efficiency and flexibility specifically arising in, the realm of
15 computerized content generation and display technologies, and are not well-understood, routine,
16 and conventional elements.

17 39. For example, the claimed inventions of the '287 patent recite innovative, technical
18 improvements that associate symbolic names with UI objects (e.g., UI objects for a widget)
19 corresponding to web components of web services that are manually or automatically selected,
20 and defined based on, for example, data format type, and produce device-independent
21 applications including those symbolic names, together with device-dependent players, to provide
22 uniform, data-efficient server-based content display across different types of devices.

23 40. The technology claimed in the '287 patent does not preempt all ways for the
24 computerized generation of code for a display of a device nor any other well-known or prior art
25 technology. For example, the specific, innovative technical improvements do not preempt well-
26 known methods of generating code for a display of a device by programming in HTML or
27 JavaScript code.
28

1 41. Each claim of the '287 patent thus recites a combination of elements sufficient to
2 ensure that the claim amounts to significantly more than a patent on an ineligible concept.

3 42. Accordingly, each claim of the '287 patent recites a combination of elements
4 sufficient to ensure that the claim amounts to significantly more than a patent on an ineligible
5 concept.

6 43. Plaintiff is the lawful owner of all rights, title, and interest in United States Patent
7 No. 9,063,755 titled "Systems and Methods for Presenting Information on Mobile Devices,"
8 including the right to sue and to recover for infringement thereof. The '755 patent was duly and
9 legally issued on June 23, 2015, naming Steven H. Rempell, David Chrobak and Ken Brown as
10 the inventors. A true and correct copy of the '755 patent is attached as Exhibit H.

11 44. The inventions of the '755 patent utilize inventive concepts to solve technical
12 problems associated with methods and systems for displaying content on displays of devices,
13 providing more efficient ways of generating code for uniformly displaying content, for example
14 dynamic content, across different kinds of devices. For example, the inventions of the '755
15 patent allow a data-efficient and flexible association between a symbolic name and a UI object
16 (e.g., a UI object for a widget), corresponding to a web component of a web service, that is
17 defined for presentation on a display of a device. A device-independent application including
18 the symbolic name is produced and provided to the device, together with a device-platform-
19 dependent player.

20 45. The claimed inventions of the '755 patent allow the UI object to be efficiently
21 displayed across different kinds of devices (e.g., PC, mobile or tablet; or different browsers,
22 operating systems, and applications, including both native and browser-based applications), as
23 opposed to, for example, programming directly in HTML or JavaScript code. In turn, a user can
24 enter an input value to the UI object, and obtain an output value based on a web service
25 associated with the UI object, the input value and output value also being communicated through
26 symbolic names to provide an additional level of efficiency.

27 46. The claims of the '755 patent do not recite merely the performance of a known
28 business practice on the Internet. Instead, the claims of the '755 patent recite inventive concepts

1 concerning the computerized, data-efficient generation of server-based content (e.g., a UI object
2 for a widget) on displays for different types of devices, such as PC, tablet, or mobile devices, or
3 different browsers and applications. For example, the claims of the '755 utilize symbolic name
4 associations and provide device-independent applications including those symbolic names,
5 together with device-platform-dependent players, to devices. Further, input values and output
6 values for the defined content are also communicated as symbolic names. Such features are
7 specifically grounded in, and overcome problems with data efficiency and flexibility specifically
8 arising in, the realm of computerized content generation and display technologies, and are not
9 well-understood, routine, and conventional elements.

10 47. For example, the claimed inventions of the '755 patent recite innovative, technical
11 improvements that associate symbolic names with defined UI objects (e.g., UI objects for a
12 widget) corresponding to web components of web services, and produce device-independent
13 applications including those symbolic names, together with device-platform-dependent players,
14 to provide uniform, data-efficient content, such as dynamic content, for display across different
15 types of devices.

16 48. The technology claimed in the '755 patent does not preempt all ways for the
17 computerized generation of code for a display of a device, nor any other well-known or prior art
18 technology. For example, the specific, innovative technical improvements claimed in the '755
19 patent do not preempt well-known methods of generating code for a display of a device by
20 programming in HTML or JavaScript code.

21 49. Each claim of the '755 patent thus recites a combination of elements sufficient to
22 ensure that the claim amounts to significantly more than a patent on an ineligible concept.
23 Accordingly, each claim of the '755 patent recites a combination of elements sufficient to ensure
24 that the claim amounts to significantly more than a patent on an ineligible concept.

25 **BACKGROUND**

26 50. Plaintiff Express Mobile is a leader in the business of developing mobile app and
27 web site design and creation platforms, and has intellectual property including U.S. patents
28 relating to certain tools useful in the field. Express Mobile is managed by individuals with

1 decades of technology and business experience. The Chairman of the Board and CTO of
2 Express Mobile, Steve Rempell, is the inventor of Express Mobile's patent portfolio. Mr.
3 Rempell has over 50 years of experience in technology companies, with much of that work
4 focused on web-based technologies and applications.

5 51. Defendant Salesforce is a well-known company that claims to be the world's #1
6 customer relationship management (CRM) platform. More than 150,000 companies use
7 Salesforce CRM to grow their businesses by strengthening customer relationships and better
8 understanding their customers' needs by better managing customer information and interactions.
9 Salesforce has grown rapidly and now generates billions of dollars of revenue per year.

10 **COUNT I - INFRINGEMENT OF U.S. PATENT NO. 6,546,397**

11 52. Plaintiff incorporates by reference the allegations contained in paragraphs 1 to 51
12 above.

13 53. Defendant Salesforce has performed a method to allow users to produce Internet
14 websites which infringes, either literally or under the doctrine of equivalents, one or more claims
15 of the '397 patent in violation of 35 U.S.C. § 271(a).

16 54. Upon information and belief, Salesforce directly infringed at least claim 1 of
17 the '397 patent through its Lightning App Builder website-building tools that are configured for
18 use with one of a number of browsers on a user's computer (the "Accused Instrumentality") that
19 provided browser-based website authoring tools in which the user-selected settings representing
20 website elements are stored in a database and in which the stored information is retrieved to
21 generate the website.

22 55. Salesforce has infringed at least claim 1 of the '397 patent by having performed a
23 method to allow users to produce Interest websites on and for computers having a browser and a
24 virtual machine capable of generating displays.

25 56. The Accused Instrumentality enabled a user to produce a website through a
26 browser on the user's computer interacting with Salesforce's server facilities, hosted by
27 Salesforce.com. By way of example, an enterprise (e.g., Lightning Realty) creates an account @
28 Salesforce.com and builds a Home Page using the Lightning App Builder.

Source: <https://www.youtube.com/watch?v=KxamMxgzjxw>

57. This resulted in a home page with a unique and stable URL (i.e., na24.lightning.force.com/c/HouseExplorerApp.app) as well as a set of one or more related web pages, which can include blogs, widgets and plug-ins.

58. The user can then add different types of pages.

Lightning App Builder

The Lightning App Builder is a point-and-click tool that makes it easy to create custom pages for the Salesforce mobile app and Lightning Experience, giving your users what they need all in one place. The Lightning App Builder is also a one-stop shop for configuring Lightning apps.

You can access the Lightning App Builder from Setup by entering Lightning App Builder in the Quick Find box and then selecting **Lightning App Builder**.

With the Lightning App Builder, you can build:

- Single-page apps that drill down into standard pages
- Dashboard-style apps, such as apps to track top sales prospects or key leads for the quarter
- “Point” apps to solve a particular task, such as an expense app for users to enter expenses and monitor expenses they’ve submitted
- Custom record pages for your objects, tailored to the needs of your users
- Custom Home pages containing the components and features that your users use most

But that’s not all. When you edit a Lightning app from the App Manager in Setup, you’re brought into the Lightning App Builder to manage the app’s settings. You can update the app’s branding, navigation, app options, and manage the Lightning pages assigned to that app all inside the Lightning App Builder.

(https://help.salesforce.com/articleView?id=lightning_app_builder_overview.htm&type=5).

1 59. The Accused Instrumentality is configured to operate with browser engines to
 2 interpret and execute JavaScript and HTML to render web pages on a computer. For example,
 3 Internet Explorer relies on Trident (code name for MSHTML) (which now includes the Chakra
 4 JavaScript Engine, see <http://en.wikipedia.org/wiki/MSHTML>); Safari and Chrome rely on
 5 Webkit (which includes WebCore and JavaScript Core, see
 6 <http://en.wikipedia.org/wiki/WebKit>); Firefox relies on Gecko (which includes Spidermonkey,
 7 see <http://www.mozilla.org/projects/technologies.html>); Opera currently relies on Presto (which
 8 in turn relies on Carakan) and will soon move to WebKit. (See
 9 http://en.wikipedia.org/wiki/Presto_layout_engine).

Lightning Experience and Lightning-Based Features

The following table describes minimum browser version requirements for using Lightning components within various features that are built with our next-generation user interface platform.

	Microsoft* Internet Explorer*	Microsoft* Edge	Google Chrome™	Mozilla* Firefox*	Apple* Safari*
Lightning Experience	IE 11 (EOL December 21, 2020) ¹	Windows 10	Latest	Latest	10.x+
Salesforce Console in Lightning Experience	N/A	Windows 10	Latest	Latest	10.x+
Lightning Communities	IE 11	Windows 10	Latest	Latest	10.x+
Lightning for Outlook (Client)	IE 11	N/A	N/A	N/A	N/A
Lightning for Outlook (Web)	IE 11	Windows 10	Latest	Latest	10.x+

24
 25
 26 60. All of these well-known modern browsers rely on engines that fit the definition of
 27 a virtual machine, which interpret and execute JavaScript and HTML to render web pages on a
 28 computer. These include, but are not limited to, Javascript engines such as Chrome V8

1 (Chrome), SpiderMonkey (Firefox), JavaScriptCore (Safari), Chakra (Edge), as well as browser
2 engines such as Webkit (Safari), Gecko (Safari) and Blink (Chrome).

3 61. The Accused Instrumentality presented a viewable menu having a user selectable
4 panel of settings describing elements on a website, the panel of settings being presented through
5 a browser on a computer adapted to accept one or more of the selectable settings in the panel as
6 inputs therefrom, and where at least one of the user selectable settings in the panel corresponds
7 to commands to a virtual machine.

8 62. After Logging into Salesforce, the Accused Instrumentality was accessed from the
9 Salesforce setup page, by entering “Lightning App Builder” in the “Quick Find” box and then
10 selecting the Accused Instrumentality. An app page was built using the following steps:

11 **Create an App Home Page with the Lightning App Builder**

12 Create a home page for an app that you can add directly into the Salesforce mobile app
13 navigation list and into Lightning apps. Your users can then easily access the objects and
14 items that are most important in that app.

- 15 1. From Setup, enter App Builder in the Quick Find box, then select **Lightning**
16 **App Builder**.

17 **Lightning App Builder**

The Lightning App Builder provides an easy to use graphical interface for creating

18 View: All  Create New View

63. The Accused Instrumentality presented a viewable menu having a user selectable panel of settings describing elements on a website. For example, upon choosing a template from the Dropdown shown above, the browser opens a webpage containing the Accused Instrumentality User Interface.

UI Graphic from

https://trailhead.salesforce.com/modules/lightning_app_builder/units/lightning_app_builder_intro

The Lightning App Builder's user interface makes creating Lightning pages easy. Here's a breakdown of the parts of the tool.

Header (1)

When you're working on a Lightning page, the header shows you its label, and contains a Pages list where you can see the last 10 pages that you modified. You can also return to Setup without saving or to view more help for the Lightning App Builder.

If you're editing an app, the header also shows the app name and contains an App Settings tab where you can configure the app's options such as branding, navigation, and the utility bar. In an app context, the Pages list shows all active Lightning pages associated with the current app, including record and app pages assigned to the app, and all Home pages that are assigned to a profile.

Toolbar (2)

Use the buttons in the toolbar to cut, copy, and paste page content; and to undo, redo, save, or activate your Lightning page. You can also view your page in different formats, refresh the canvas, or adjust the canvas size to fit your view.

Lightning Components Pane (3)

The components pane contains all standard and custom Lightning components that are supported for your Lightning page. Click and drag a component to add it to the page.

Lightning Page Canvas (4)

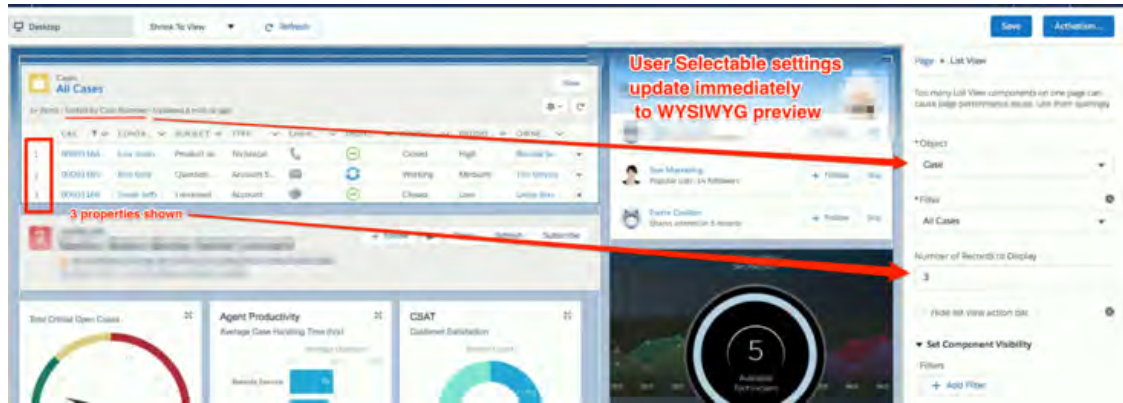

The canvas area is where you build your page. Drag components to reorder them on the page.

Properties Pane (5)

Depending on what you select on the page, the properties pane shows either the overall page properties or the properties of the component that you've selected. Click Page in the breadcrumb to access the page properties when viewing a component.

Source: https://trailhead.salesforce.com/modules/lightning_app_builder/units/lightning_app_builder_intro

64. In the figure below, the Properties Pane (panel) to the right contained exemplary user selectable settings for that list view. The user selected settings “Object: Case” and “Number of Records to Display: 3” are reflected in the Lightning Page Canvas to the left.

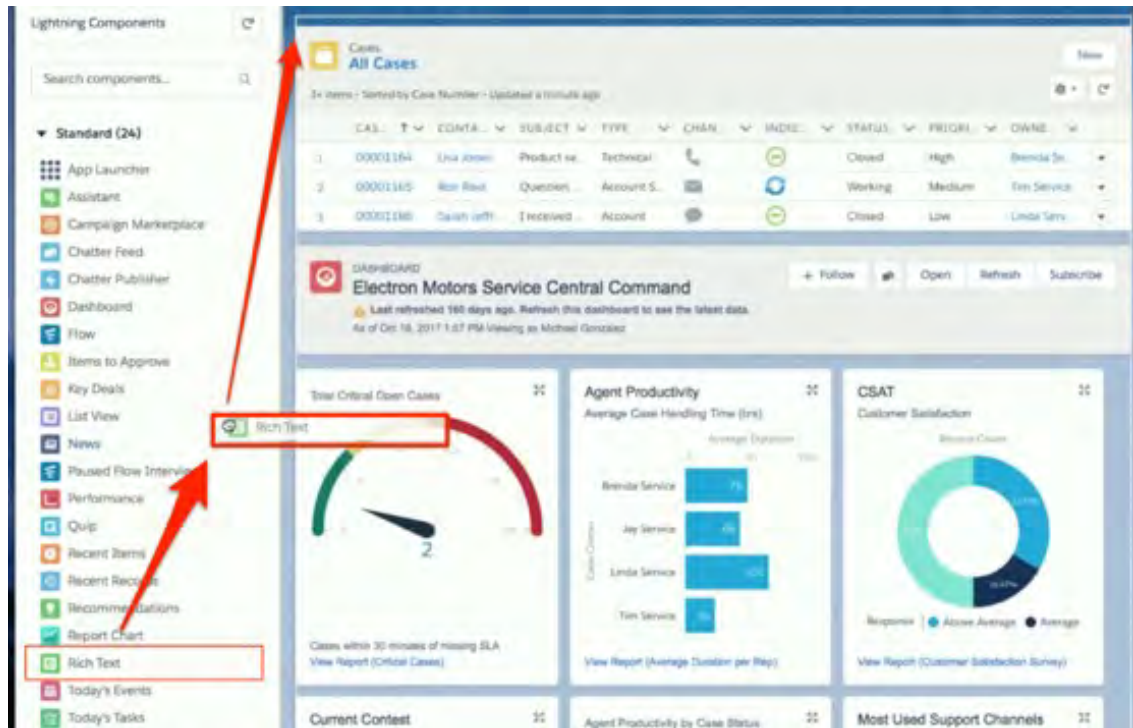

Screenshot - Panel of user selectable settings as per <https://youtu.be/dQTa4sijMqY> 06:23 / 17:14

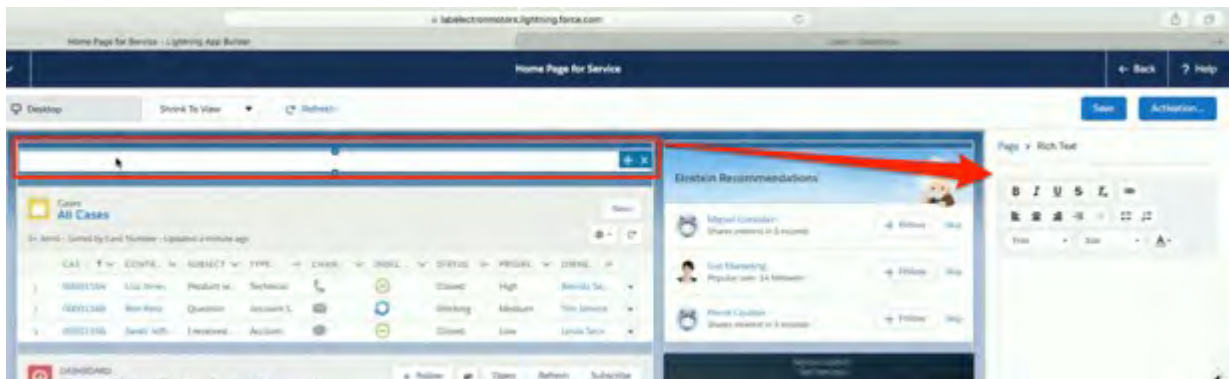

65. Because the compatible browsers all rely on browser engines (which are process virtual machines) to generate and display the user-authored web pages on a particular computer, the settings that a user-author selects through the Salesforce visual editor necessarily correspond to virtual machine commands. For example, JavaScript and HTML code are used by the browser’s engine to generate and display a Salesforce web page for a user viewing the web page on a computer, the author’s selections being reflected in the displayed page.

66. The Accused Instrumentality generated a display in accordance with one or more user selected settings substantially contemporaneously with the selection thereof. This is performed, for example, using the Salesforce visual editing tool through the browser. Exemplary screens below show the selection of the Rich Text component from the left-hand Components Pane and its placement above the list component in the preview window. The properties panel changes to reflect the Rich Text Component’s user selectable settings.

67. In the exemplary figure below, the user selected settings in the Properties Pane, the text “Reminder: Manager Training in HQ. Please register” and “Bold” style are immediately reflected in the Page Canvas. Once the user selects options such as image alignment, text color and paragraph styles through the WYSIWYG editor, the display immediately updates to reflect the selected option. The result from the selections is illustrated in the Lightning Page Canvas shown in the center of the App Builder Window.

Source: <https://youtu.be/dQTa4sijMqY> 06:43 / 17:14

68. User selected settings were displayed substantially contemporaneously with the selection thereof. In the example above, the bold option has been selected from the options available in the Rich Text properties panel and applied to the user defined text as soon as the button is pressed.

69. The Accused Instrumentality stored information representative of the one or more user selected settings in a database. For example, the Accused Instrumentality built Lightning apps which were built and hosted on the Salesforce server.

Lightning App Builder

The Lightning App Builder is a point-and-click tool that makes it easy to create custom pages for the Salesforce mobile app and Lightning Experience, giving your users what they need all in one place. The Lightning App Builder is also a one-stop shop for configuring Lightning apps.

You can access the Lightning App Builder from Setup by entering Lightning App Builder in the Quick Find box and then selecting **Lightning App Builder**.

With the Lightning App Builder, you can build:

- Single-page apps that drill down into standard pages
- Dashboard-style apps, such as apps to track top sales prospects or key leads for the quarter
- “Point” apps to solve a particular task, such as an expense app for users to enter expenses and monitor expenses they’ve submitted
- Custom record pages for your objects, tailored to the needs of your users
- Custom Home pages containing the components and features that your users use most

But that’s not all. When you edit a Lightning app from the App Manager in Setup, you’re brought into the Lightning App Builder to manage the app’s settings. You can update the app’s branding, navigation, app options, and manage the Lightning pages assigned to that app all inside the Lightning App Builder.

1
2 **Source:** https://help.salesforce.com/articleView?id=lightning_page_overview.htm&type=5

3 **Lightning Pages.**

4 A Lightning page is a custom layout that lets you design pages for use in the
5 Salesforce mobile app or Lightning Experience.

6 Lightning pages occupy a middle ground between page layouts and Visualforce
7 pages. Like a page layout, Lightning pages allow you to add custom items to a
8 page. However, these items, instead of being fields or Visualforce components, are
9 Lightning components, which allow much more flexibility.

10 The structure of a Lightning page adapts for the device it's viewed on. The
11 template you choose when creating the page controls how it displays on a given
12 device. The Lightning page's template divides the page into regions.

17 Lightning pages are built using Lightning components—compact, configurable,
18 and reusable elements that you can drop into regions of the page in the Lightning
19 App Builder.

20 **Source:** https://help.salesforce.com/articleView?id=lightning_page_overview.htm&type=5

21 70. As shown below, in the Salesforce Developer website is a description of Lightning
22 Components that explains of what they are composed, how data was stored and received within
23 them, the data being representative of one or more user settings in a database.

24 A Lightning component is a combination of markup, JavaScript, and CSS. You first create a component
25 bundle.

1. In the Developer Console, select **File | New | Lightning Component**.
2. For the component name, enter `MyContactList`.
3. Check **Lightning Record Page** and then click **Submit**.
4. Add a reference to the Apex controller, `controller="MyContactListController"`, on the `aura:component` tag. The `aura:component` tag should now look like this:

```
<aura:component controller="MyContactListController"
implements="flexipage:availableForRecordHome,force:hasRecordId" access="global" >
```

5. Add the following code to the component on line 2:

```
<aura:attribute name="recordId" type="Id" />
<aura:attribute name="Account" type="Account" />
<aura:attribute name="Contacts" type="Contact" />
<aura:attribute name="Columns" type="List" />
<force:recordData aura:id="accountRecord"
recordId="{!v.recordId}"
targetFields="{!v.Account}"
layoutType="PULL"
/>
<lightning:card iconName="standard:contact" title="{! 'Contact List for ' +
v.Account.Name}">
<!-- Contact list goes here -->
</lightning:card>
```

An `aura:attribute` is what we use to store data within a Lightning component, in this case, the id of the current Account record page. The component is also using Lightning Data Service, `force:recordData`, to retrieve and store the fields of the current record in the attribute named `Account`, so that we can display the name of the Account as the title of the component. The Lightning Framework contains UI building blocks known as Base Lightning Components. `lightning:card` is a base component for displaying data. The title of the card is pulling the name of the account from the aura attribute `Account`.

6. Select **File | Save**.

Source: <https://trailhead.salesforce.com/projects/quickstart-lightning-components/steps/quickstart-lightning-components3>

71. The Accused Instrumentality generated a website at least in part by retrieving the information representative of the one or more user selected settings stored in the database. In particular, the author-user can then generate and view the created web page. On initial request App components are rendered to produce HTML DOM elements and sent to populate the web page in the browser.

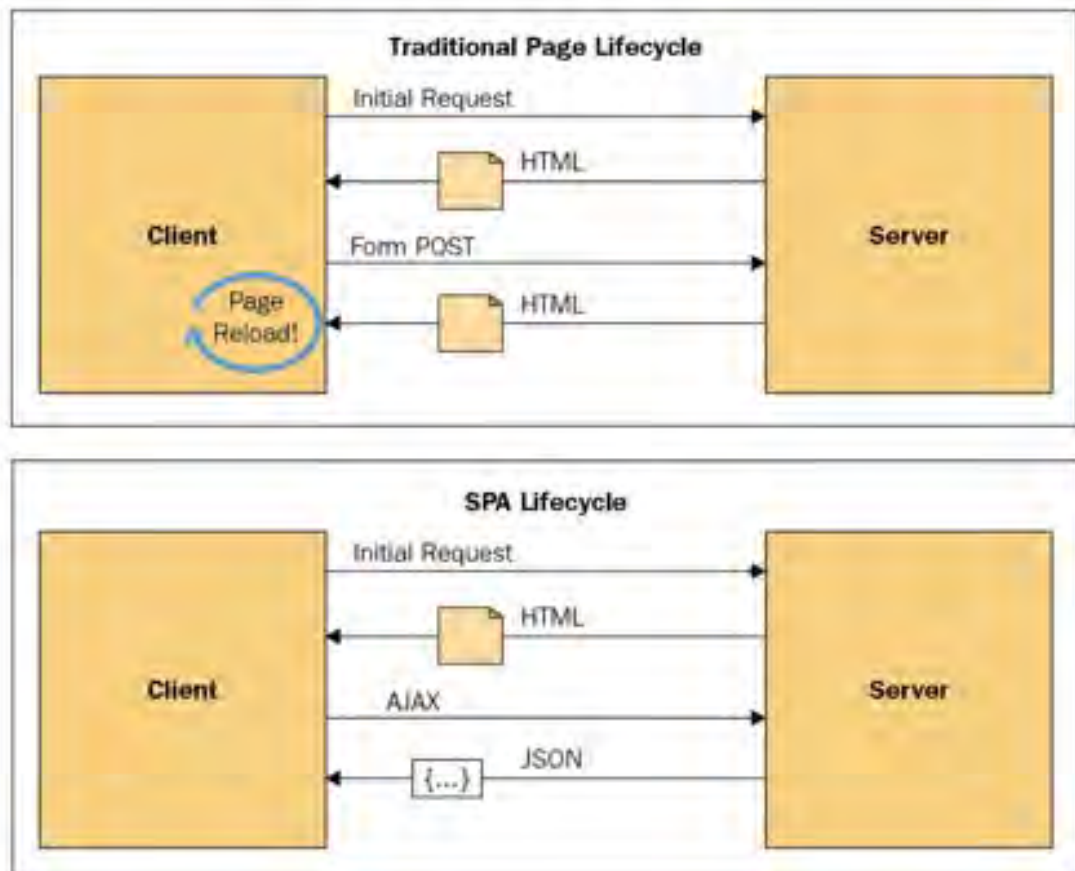

Lightning Component architecture

Before we start building Lightning Components, let's understand the architectural differences between how Lightning Components and Salesforce Classic Visualforce work.

In a traditional Classic Salesforce UI, every time a user clicks a link, an HTML page is loaded from the server. Even for small interactions, the whole web page or tab needs to be reloaded.

Lightning Experience is based on the concept of a **Single-Page Application (SPA)**. In SPAs, once the page is loaded, for any other subsequent request of data from the server, an Ajax callout is made and the page is re-rendered with new data. The aim is to avoid the whole page refreshing.

The following diagram helps to visualize the difference between a single-page architecture and a traditional web page rendering mechanism:

Source:

https://www.packtpub.com/mapt/book/application_development/9781787124677/1/ch011v11sec11/lightning-component-architecture

72. The Lightning Component Framework was built on the Aura Framework using metadata to build user interfaces in Lightning pages.

“What is Aura?

Aura is an open-source UI framework built by Salesforce for developing dynamic web apps for mobile and desktop devices. You can use open-source Aura to build apps independent of Salesforce.

Salesforce uses Aura to build apps, such as Lightning Experience and the Salesforce app. Salesforce customers use the Lightning Component framework to build Lightning components. The Lightning Component framework is built on the open-source Aura framework. However, the open-source Aura framework has some features that aren't available to Salesforce customers.

Aura's architecture uses two key building blocks: components and events.

Components are the self-contained and reusable units of an app. They represent a reusable section of the UI, and can range in granularity from a single line of text to an entire app. The framework includes a set of prebuilt components in the aura and ui namespaces. You can assemble and configure components to form new components in an app. Components are rendered to produce HTML DOM elements within the browser.

Components communicate with other components by firing and handling events. The robust event model enables you to develop loosely coupled components. Once you define the events that interact with your components, your team can work on the components in parallel to quickly build a powerful app.”

Source: <https://github.com/forcedotcom/aura>

73. As shown in the excerpt below, Lightning Data Service, (force:recordData), retrieved and stored the fields of current records from the server-side database. Aura:attribute was used to store data within the Lightning component and lightning:card was used to Display the data. The data was refreshed from the database server via Ajax requests and JSON Responses through the Component controller.

1 "A Lightning component is a combination of markup, JavaScript, and CSS. You first create a component
bundle.

2 `<aura:component controller="MyContactListController"
implements="flexipage:availableForRecordHome,force:hasRecordId" access="global" >`

3 7. Add the following code to the component on line 2:

4 `<aura:attribute name="recordId" type="Id" />`

5 `<aura:attribute name="Account" type="Account" />`

6 `<aura:attribute name="Contacts" type="Contact" />`

7 `<aura:attribute name="Columns" type="List" />`

8 `<force:recordData aura:id="accountRecord"`

9 `recordId="{!v.recordId}"`

10 `targetFields="{!v.Account}"`

11 `layoutType="FULL"`

12 `/>`

13 `<lightning:card iconName="standard:contact" title="{! 'Contact List for ' +
v.Account.Name}" >`

14 `<!-- Contact list goes here -->`

15 `</lightning:card>`

16 An `aura:attribute` is what we use to store data within a Lightning component, in this case, the id
of the current Account record page. The component is also using Lightning Data
Service, `force:recordData`, to retrieve and store the fields of the current record in the attribute
named `Account`, so that we can display the name of the Account as the title of the component.
The Lightning Framework contains UI building blocks known as Base Lightning
Components. `lightning:card` is a base component for displaying data. The title of the card is
pulling the name of the account from the aura attribute `Account`.

17 6. Select File I Save.

18 *Source: <https://trailhead.salesforce.com/projects/quickstart-lightning-components/steps/quickstart-lightning-components3>*

19 74. The Accused Instrumentality built one or more web pages to generate the website
20 from at least a portion of the database and at least one run time file, where the at least one run time
21 file utilized information stored in the database to generate virtual machine commands for the
22 display of at least a portion of the one or more web pages. The basic building block of a Lightning
23 Page, which is a Lightning Component, is made of a combination of Markup (e.g., HTML), CSS,
24 and Java Script, including Runtime files. The Runtime files provided virtual machine commands
25 for display of the one or more pages when they were read and used by the applicable browser's
26 engine to render the one or more pages. A user, whether a software developer, a website designer
27 at Salesforce or a third-party utilizing the Accused Instrumentality, could view the finalized
28

1 website in a browser outside of the website authoring environment to verify the website conforms
2 to the intended design.

3 75. Upon information and belief, Salesforce was made aware of the '397 patent and its
4 infringement thereof at least as early as December 20, 2018 when Express Mobile provided notice
5 of Salesforce's infringement of the '397 patent to Amy Weaver, who, at the time was, President,
6 Legal & Corporate Affairs, General Counsel and Secretary. Upon information and belief, since at
7 least the time Salesforce received notice, Salesforce induced others to infringe at least one claim
8 of the '397 patent under 35 U.S.C. § 271(b) by, among other things, and with specific intent or
9 willful blindness, actively aiding and abetting others to infringe, including but not limited to
10 Salesforce's clients, customers, and end users, whose use of the Accused Instrumentalities
11 constitutes direct infringement of at least one claim of the '397 patent. In particular, Salesforce's
12 actions that aided and abetted others such as customers and end users to infringe included
13 advertising and distributing the Accused Instrumentalities and providing instruction materials,
14 training, and services regarding the Accused Instrumentalities. *See, e.g.* www.salesforce.com,
15 help.salesforce.com, <https://trailhead.salesforce.com>, and related subdomains. Upon information
16 and belief, Salesforce engaged in such actions with specific intent to cause infringement or with
17 willful blindness to the resulting infringement because Salesforce has had actual knowledge of
18 the '397 patent and knowledge that its acts were inducing infringement of the '397 patent since at
19 least the date Salesforce received notice that such activities infringed the '397 patent.

20 76. Upon information and belief, Salesforce was liable as a contributory infringer of
21 the '397 patent under 35 U.S.C. § 271(c) by offering to sell, selling and importing into the United
22 States website or web page authoring tools to be especially made or adapted for use in an
23 infringement of the '397 patent. The Accused Instrumentalities are a material component for use
24 in practicing the '397 patent and are specifically made and are not a staple article of commerce
25 suitable for substantial non-infringing use.

26 77. Upon information and belief, since the date of its receipt of notice, Salesforce's
27 infringement of the '397 patent was willful and intentional under the standard announced in *Halo*
28 *Elecs., Inc. v. Pulse Elecs., Inc.*, 136 S.Ct. 1923, 195 L.Ed 2d 278 (2016). Since at least December

1 20, 2018, Salesforce willfully infringed the '397 patent by refusing to take a license and continuing
2 to make, use, test, sell, license, and/or offer for sale/license the '397 Accused Instrumentality.
3 Salesforce has been aware that it infringes the '397 patent since at least December 20, 2018 and
4 instead of taking a license, Salesforce has opted to make the business decision to “efficiently
5 infringe” the '397 patent. In doing so, Salesforce willfully infringed the '397 Patent.

6 78. Salesforce’s infringement has damaged Express Mobile.

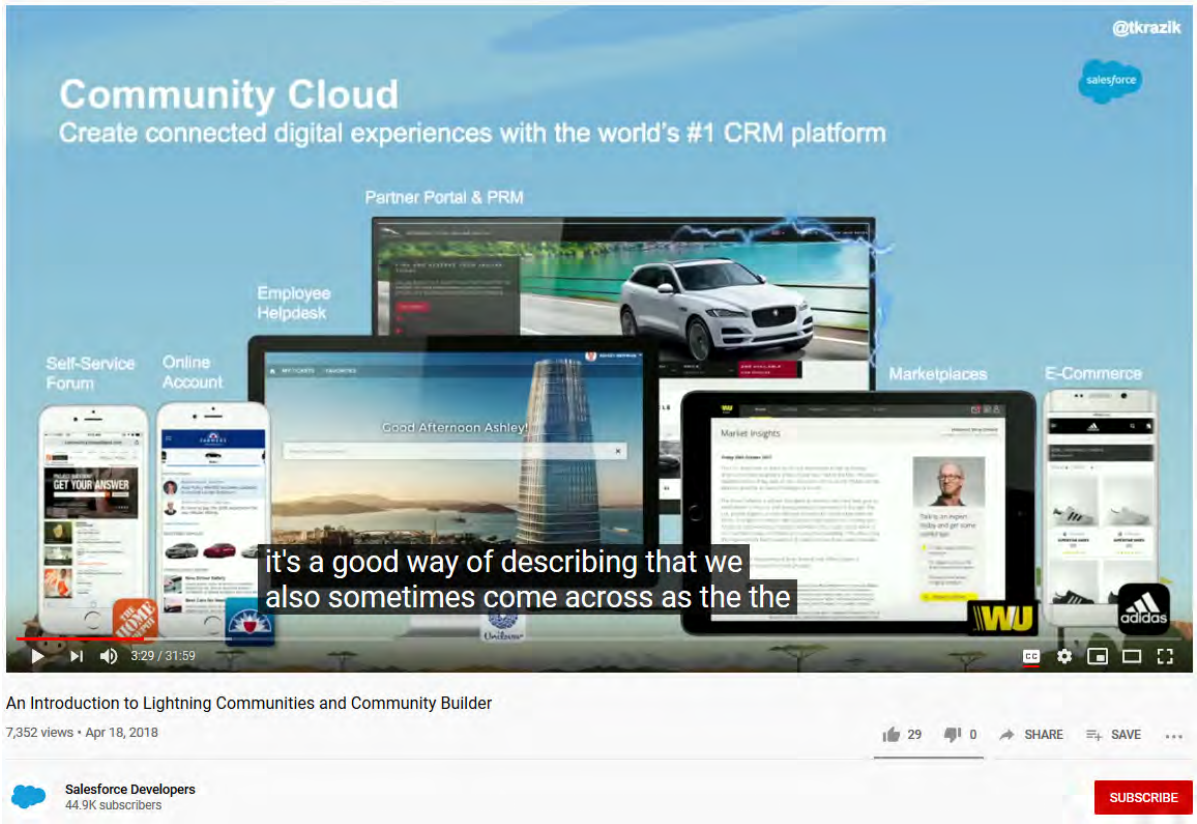

7 **COUNT II - INFRINGEMENT OF U.S. PATENT NO. 7,594,168**

8 79. Plaintiff incorporates by reference the allegations contained in paragraphs 1 to 78
9 above.

10 80. Salesforce manufactured, sold, offered to sell, used and/or provided and continues
11 to manufacture, sell, offer for sale, use and/or provide its Community Cloud, which includes the
12 Lightning Community Builder when employed with any number of computers and servers (the
13 “Accused Instrumentality”) that infringes, either literally or under the doctrine of equivalents, one
14 or more claims of the '168 patent in violation of 35 U.S.C. § 271(a).

15 81. Upon information and belief, Salesforce has directly infringed at least claim 1 of
16 the '168 patent by making and providing its users with a system for assembling a web site.

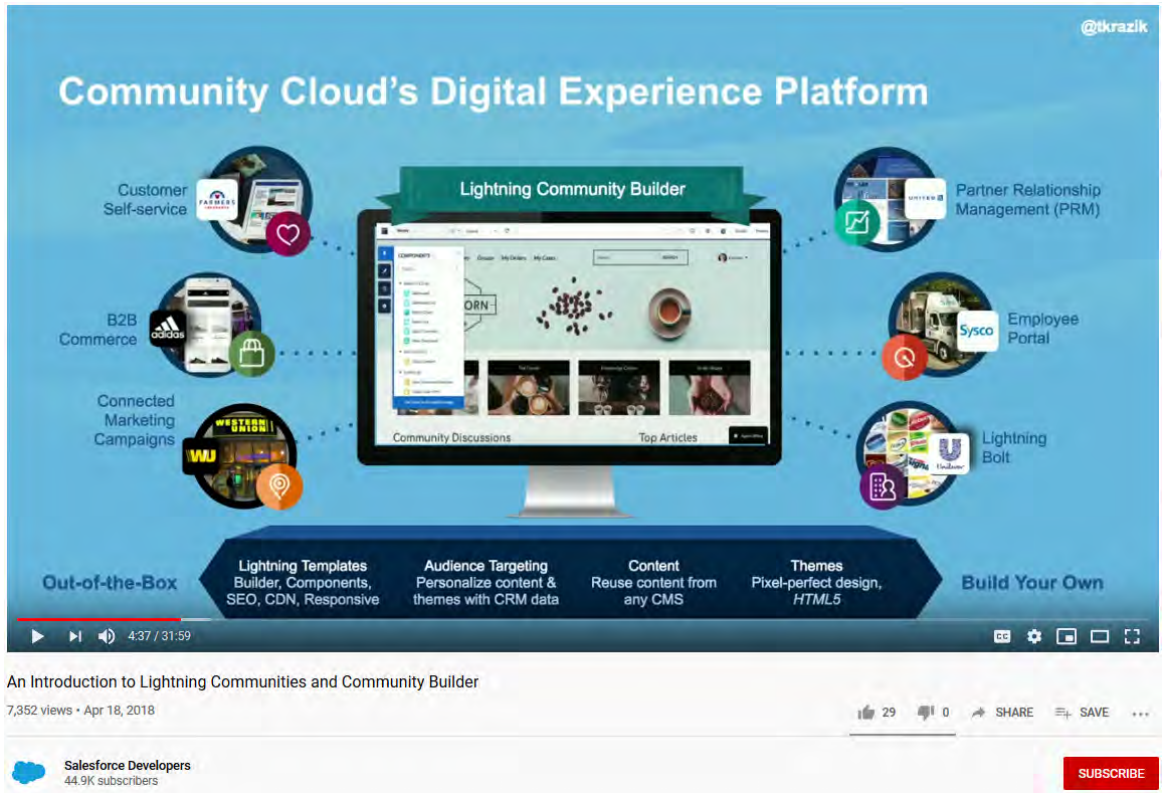

17 82. The Accused Instrumentality is configured for use with one of a number of
18 browsers on a user’s computer. The Accused Instrumentality performs a method to allow users to
19 produce Internet websites on and for computers having a browser and a virtual machine capable
20 of generating displays.

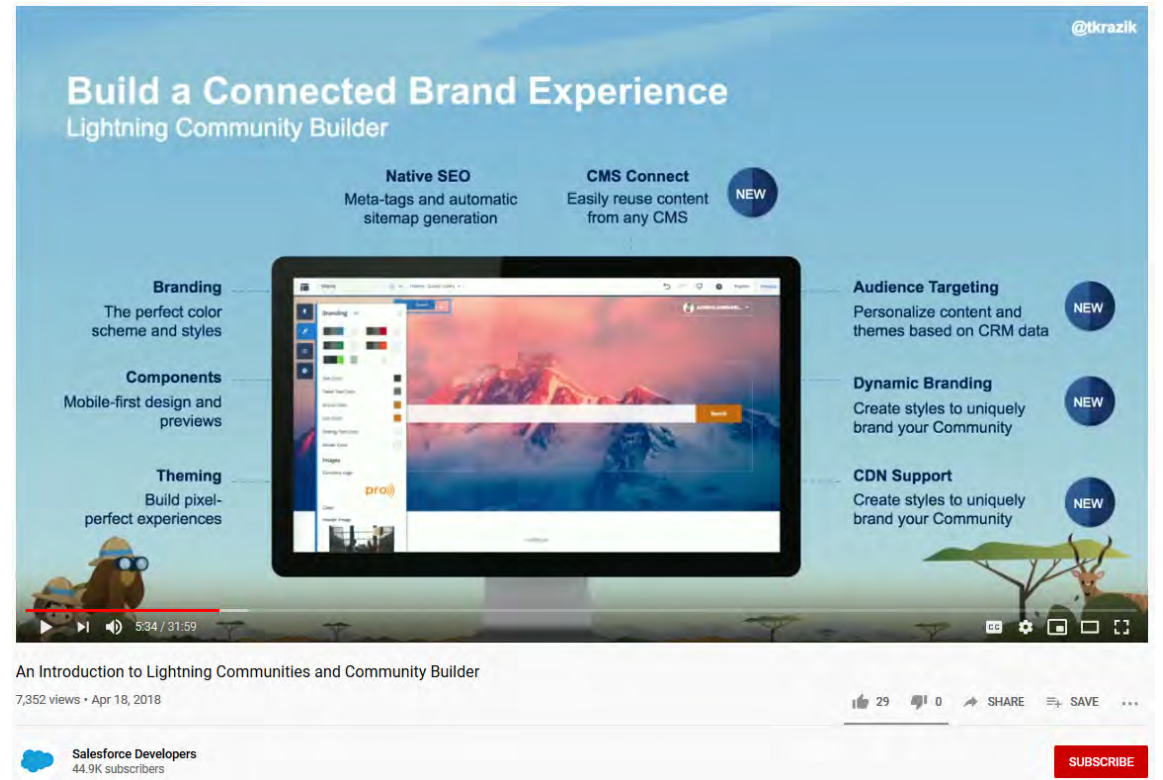

Source: <https://www.youtube.com/watch?v=yBz0F9b3KLY>

83. The Accused Instrumentality enables a user to produce a website through a browser on the user's computer interacting with the Salesforce's server facilities, hosted by Salesforce.com. For example, an enterprise may create an account on Salesforce.com and build a web site using the Lightning Community Builder.

84. The Accused Instrumentality includes a server comprising a build engine. Salesforce is a cloud computing platform, which means that its users use their browsers to create and edit their websites using a build engine on Salesforce servers.

Cloud Computing from Salesforce.

"Here are cloud computing basics for those asking, "What is cloud computing?" Cloud computing is quickly replacing the traditional model of having software applications installed on on-premise hardware, from desktop computers to rooms full of servers, depending on the size of the business. With cloud computing, businesses access applications via the internet. It's called Software As A Service (or SaaS). Businesses are freed up from having to maintain or upgrade software and hardware. Just log on and get to work, from anywhere and, in many cases, any device. Salesforce is the leader in cloud computing, offering applications for all aspects of your business, including CRM, sales, ERP, customer service, marketing automation, business analytics, mobile application building, and much more. And it all works on the same, connected platform, drawing from the same customer data. So as opposed to working in silos, your entire company can work as one a team. And because it's all in cloud as opposed to being installed on-premise, even the largest, enterprise-wide deployments can happen in a fraction of the time of traditional deployments, which can take over a year. "

Source: <https://www.salesforce.com/ap/cloudcomputing/>

Online Community Software from Salesforce Community Cloud

Community Cloud is Salesforce's comprehensive business community solution that allows your employees, customers, and partners to work together to solve problems and innovate. It is a formula for creativity and organization that boosts your productivity and innovation.

You can create communities for customers, providing knowledge, promoting engagement and sales, and helping them to help themselves. Or, for partners, sharing data, results, and leads with dealers, resellers, and distributors. Create internal enterprise communities for employees, where they can collaborate on projects or task forces, share knowledge and files, and develop better business processes.

Salesforce Community Cloud extends your business, so everyone can work together to reach your common goals.

Browser Support for Communities

Browser support for communities varies by the device on which you access the community and the community template.

REQUIRED EDITIONS

- Available in: Salesforce Classic (not available in all orgs) and Lightning Experience
- Available in: Enterprise, Performance, Unlimited, and Developer Editions

Salesforce Tabs + Visualforce

Salesforce Tabs + Visualforce communities are supported on all desktop browsers that Salesforce supports. These communities are also accessible from the Salesforce app.

Lightning Communities

Lightning communities, such as Customer Service, Partner Central, and Help Center, are supported on the following browsers.

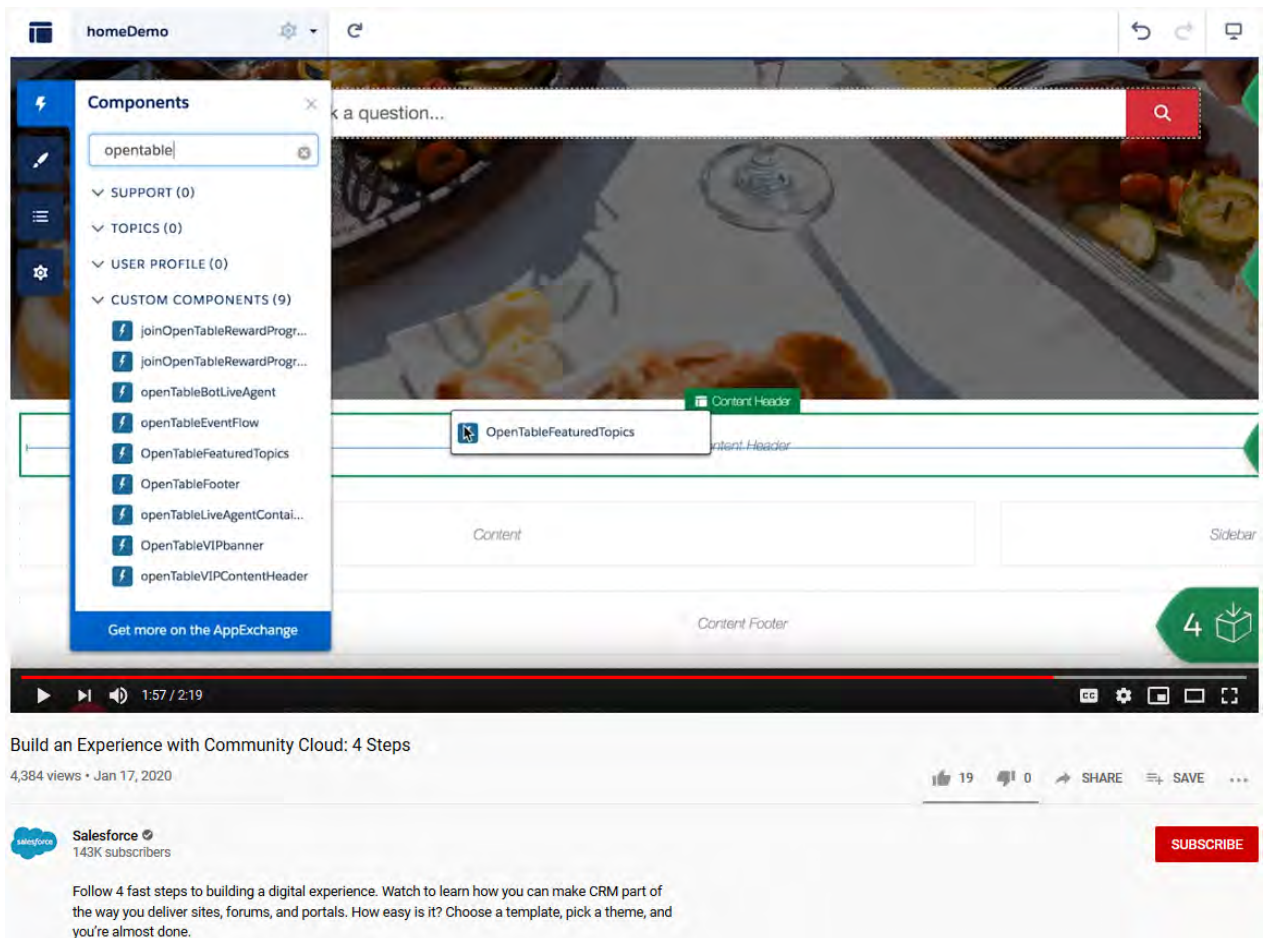

On Desktop Computers

PLATFORMS	APPLE SAFARI (LATEST VERSION)	GOOGLE CHROME™ (LATEST VERSION)	MICROSOFT* EDGE (WINDOWS* 10 ONLY)	MICROSOFT* INTERNET EXPLORER* 11	MOZILLA* FIREFOX* (LATEST VERSION)
Apple* Mac OS* Desktop	✓	✓			✓

1 88. In Community Cloud sites created by the Accused Instrumentality, each web page
 2 comprises at least one button object or at least one image object. For example, in the “Patagonia”
 3 example, in the Lightning Communities and Community Builder video, button objects are visible
 4 on the left side of both web pages, such as “Home,” “Incidents,” “Customers,” “Lookbooks,”
 5 “Inspirations,” and “Performance.”

16 89. The Accused Instrumentality is configured to create sites including at least one
17 button object or at least one image object that is associated with a style that includes values
18 defining transformations and time lines for the at least one button object or at least one image
19 object. The Accused Instrumentality allows users to change the theme of their websites. In
20 addition, Salesforce advertises that users may create their own custom components, or use pre-
21 built components on its “app exchange.”

1 90. These components include objects that are able to be added to a user’s site with
 2 explicit transformations and timelines, such as the “Carousel” component, which describes that
 3 “auto scrolling is enabled by default, and every image stays active for 5 seconds before moving
 4 on to the next one.”

19 **Source:** [https://developer.salesforce.com/docs/component-](https://developer.salesforce.com/docs/component-library/bundle/lightning:carousel/example#lightningcomponentdemo:exampleCarousel)
 20 [library/bundle/lightning:carousel/example#lightningcomponentdemo:exampleCarousel](https://developer.salesforce.com/docs/component-library/bundle/lightning:carousel/example#lightningcomponentdemo:exampleCarousel)

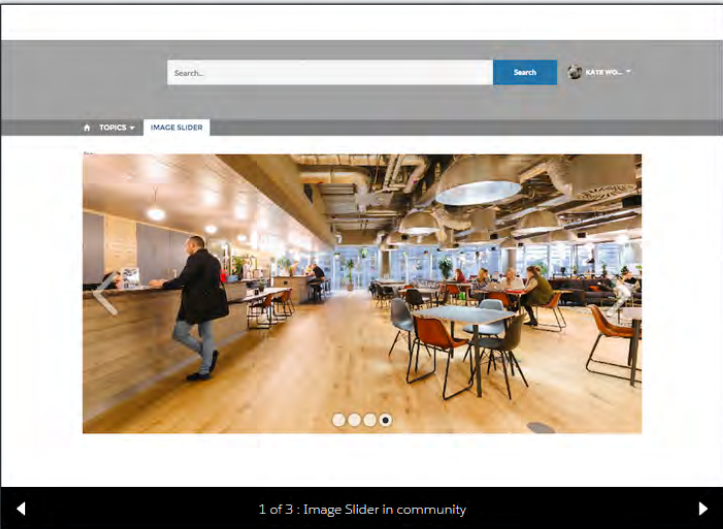

21 91. This object has a style that defines the transformations and timelines for this
 22 object, such as the variables “disableAutoRefresh,” “disableAutoScroll,” and “scrollDuration,”
 23 which affect how images in the carousel are displayed.

disableAutoRefresh	boolean	global	false	Specifies whether the carousel should stop looping from the beginning after the last item is displayed. The default value is false.
disableAutoScroll	boolean	global	false	Specifies whether auto scroll is disabled. The default value is false.
scrollDuration	integer	global	5	The auto scroll duration. The default is 5 seconds, after that the next image is displayed.

27 **Source:** [https://developer.salesforce.com/docs/component-](https://developer.salesforce.com/docs/component-library/bundle/lightning:carousel/specification)
 28 [library/bundle/lightning:carousel/specification](https://developer.salesforce.com/docs/component-library/bundle/lightning:carousel/specification)

1 92. More components that feature transformations and timelines are also available
2 from the “App Exchange,” such as an “Image Slider Component.”

7 Image Slider Component for communities. Supports all standard templates.

8 Image Slider is a slideshow gallery and is one of the most popular visual display modes in web design today. We thought it would be great to have in Salesforce community. No sooner said than done. Show your brightest pictures with our Slider component!

15

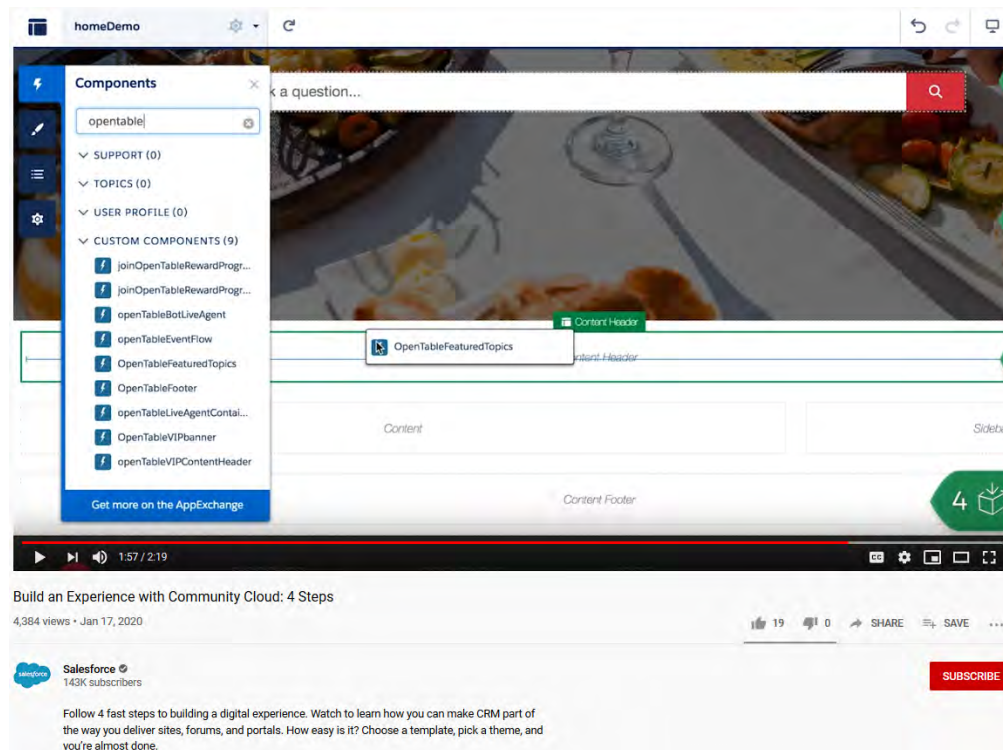

16 93. Each web page is defined entirely by each of the plurality of objects comprising
17 that web page and the style associated with the object. For example, one option for creating web
18 sites is to use “Lightning Bolt” templates comprised of objects from the Salesforce libraries.

94. Users may also drag and drop objects to create the web site.

Source: https://www.youtube.com/watch?v=cIzoxQ_bWaM

1 95. Using the Document Object Model, modern browsers parse the HTML code that
2 comprises web pages into objects.

3 96. The Accused Instrumentality produces a database with a multidimensional array
4 comprising the objects that comprise the web site including data defining, for each object, the
5 object style, an object number, and an indication of the web page that each object is part of. For
6 example, Salesforce describes its Community Cloud as a “window into CRM,” which is the
7 database and backend technologies that support the website.

8 The Document Object Model (DOM) connects web pages to scripts or programming
9 languages by representing the structure of a document—such as the HTML representing
10 a web page—in memory. Usually, that means JavaScript, although modeling HTML, SVG,
or XML documents as objects are not part of the core JavaScript language, as such.

11 The DOM represents a document with a logical tree. Each branch of the tree ends in a
12 node, and each node contains objects. **DOM methods allow programmatic access to the
tree. With them, you can change the document's structure, style, or content.**

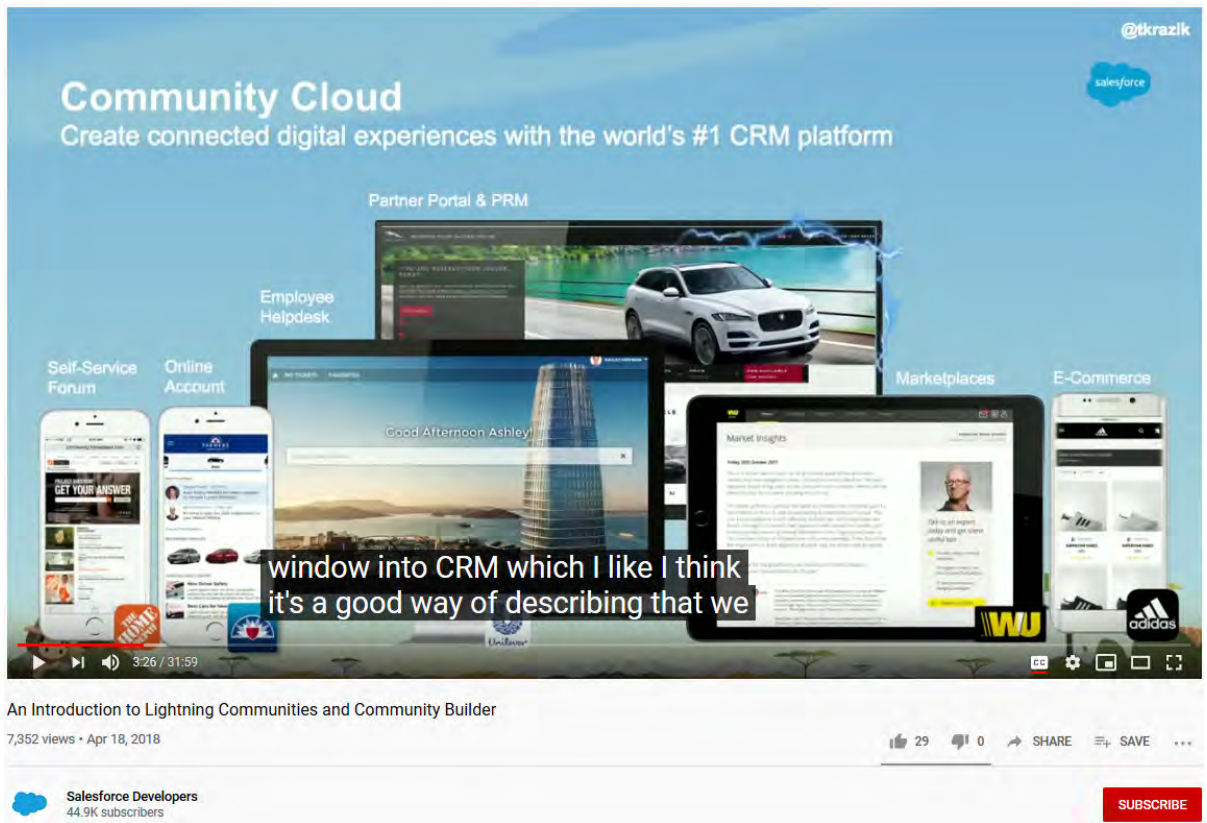

13 https://developer.mozilla.org/en-US/docs/Web/API/Document_Object_Model

14 The HTML DOM is a standard **object** model and **programming interface** for HTML. It defines:

- 15 • **The HTML elements as objects**
- 16 • **The properties of all HTML elements**
- 17 • The methods to access all HTML elements
- 18 • The **events** for all HTML elements

19 In other words: The HTML DOM is a standard for how to get, change, add, or delete HTML elements.

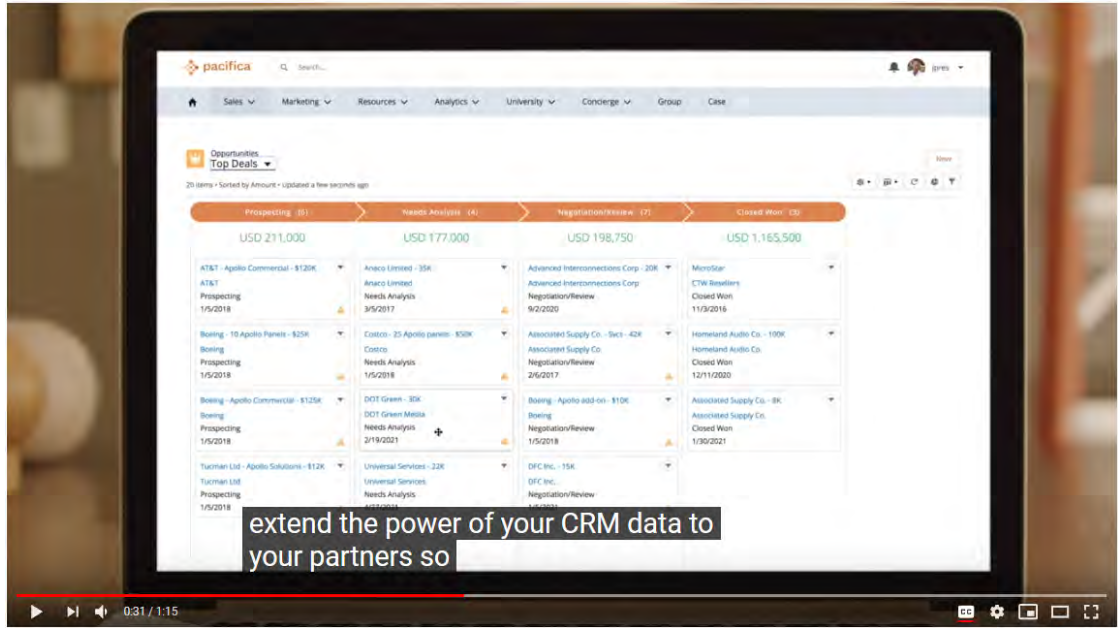

20 https://www.w3schools.com/js/js_htmldom.asp

Source: <https://www.youtube.com/watch?v=yBz0F9b3KLY>

97. The data that populates objects is saved within Salesforce’s Database.com and Oracle databases (see, e.g. <https://www.computerworld.com/article/2514750/salesforce-com-unveils-database-com.html>) because it can “extend the power of your CRM data to your partners” as shown in the Community Cloud Demo, below, and relies on information such as “internal order objects” to populate the objects, as shown in the “An Introduction to Lightning Communities and Community Builder.”

1 98. The settings for the styles and themes are also saved in Salesforce databases. For
2 example, code for the style of components such as the Carousel is saved within Salesforce,
3 including the settings the user has chosen, such as whether AutoRefresh is enabled (whether the
4 carousel will continue once it has reached the end of its images).

5 Code

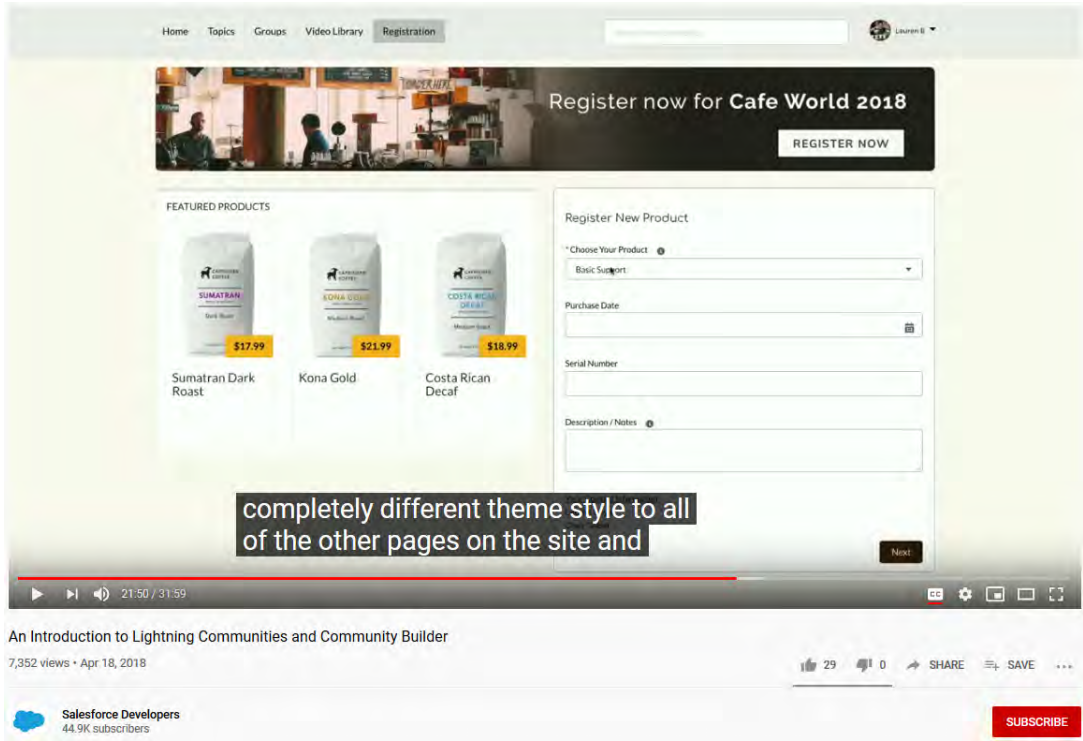

6 Component

```
7  
8 <aura:component>  
9     <lightning:carousel disableAutoRefresh="false" disableAutoScroll="false">  
10       <lightning:carouselImage  
11           src = "/docs/component-library/app/images/examples/carousel-01.png"  
12           header = "First Card"  
13           description = "First card description."  
14           alternativeText = "First card accessible description."  
15           href = "https://www.salesforce.com">  
16       </lightning:carouselImage>  
17       <lightning:carouselImage  
18           src = "/docs/component-library/app/images/examples/carousel-02.png"  
19           header = "Second Card"  
20           description = "Second card description."  
21           alternativeText = "Second card accessible description."  
22           href = "https://www.salesforce.com">  
23       </lightning:carouselImage>  
24       <lightning:carouselImage  
25           src = "/docs/component-library/app/images/examples/carousel-03.png"  
26           header = "Third Card"  
27           description = "Third card description."  
28           alternativeText = "Third card accessible description."  
29           href = "https://www.salesforce.com">  
30       </lightning:carouselImage>  
31     </lightning:carousel>  
32 </aura:component>
```

33 **Source:** <https://developer.salesforce.com/docs/component-library/bundle/lightning:carousel/example>

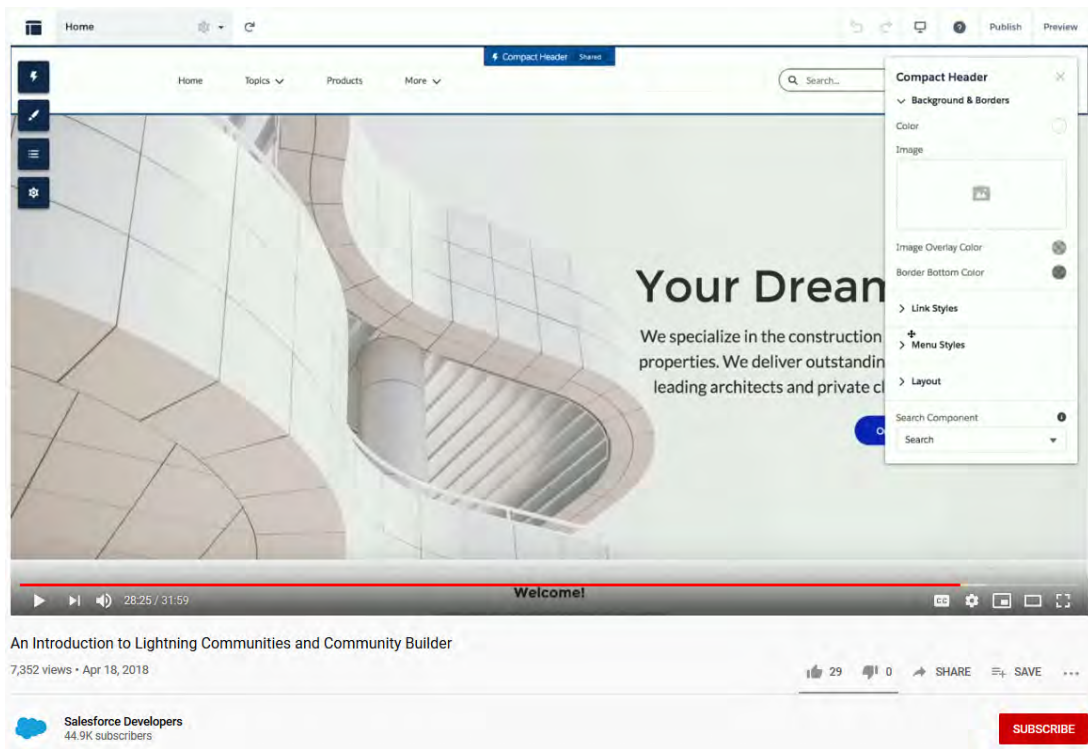

34 99. Styles are saved in relation to objects and pages. Salesforce describes that users
35 can apply one theme to one page, and “can apply a completely different theme style to all of the
36 other pages on the site.”

100. When a user edits an object, those edits are saved in Salesforce’s databases.

Source: <https://www.youtube.com/watch?v=yBz0F9b3KLY>

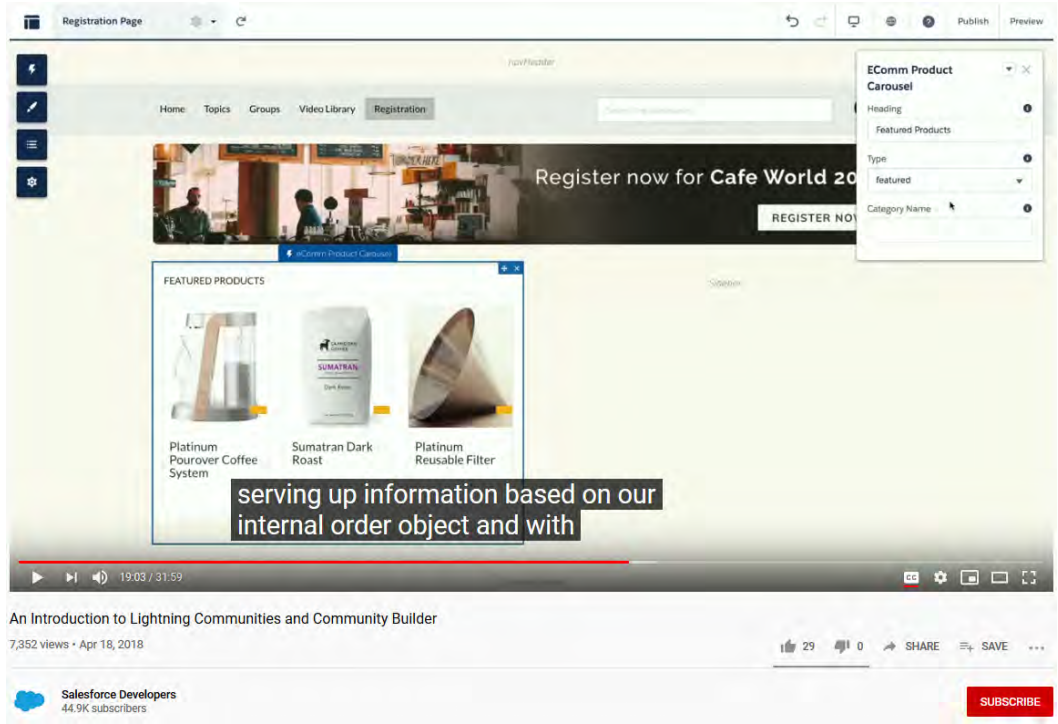

101. The Accused Instrumentality provides the database to a server accessible to a web browser. For example, Salesforce's servers host websites for its users over the Internet that include web pages created using the Accused Instrumentality. These websites are accessible to web visitors through a web browser.

Source: <https://www.youtube.com/watch?v=yBz0F9b3KLY>

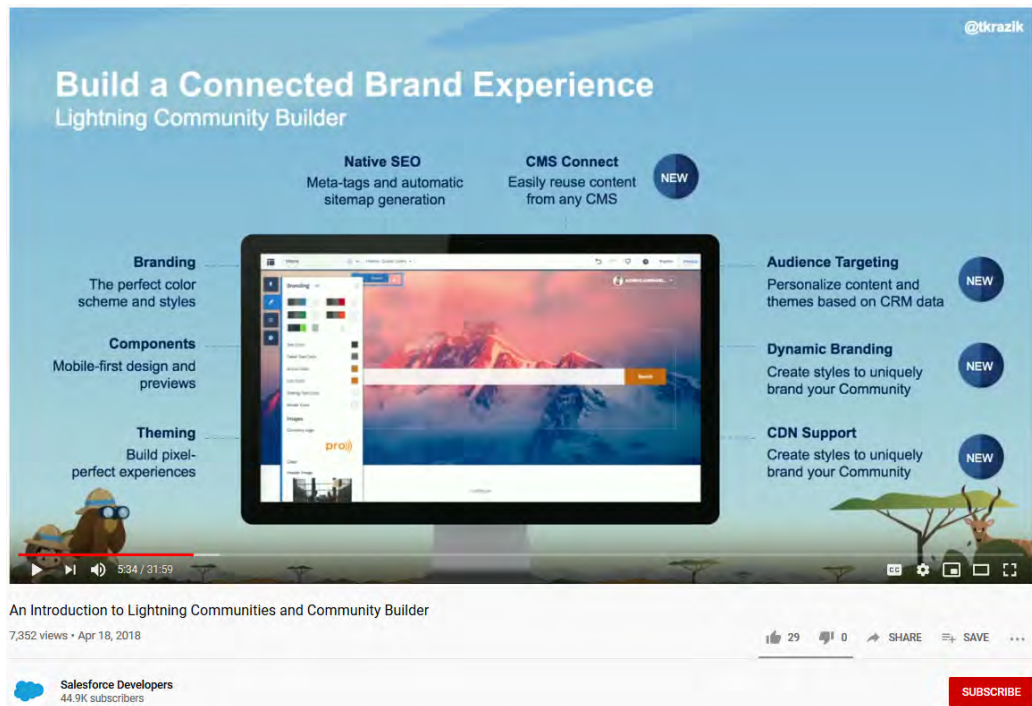

102. The database produced by the Accused Instrumentality enables a web browser with access to a runtime engine to generate the web-site from the objects and style data extracted from the provided database. Salesforce describes that its pages are generated by exposing data from its databases, such as its “internal order objects.”

103. Salesforce also describes how its audience targeting functions can “personalize content and themes based on CRM data.”

Source: <https://www.youtube.com/watch?v=yBz0F9b3KLY>

104. Modern web browsers all include a runtime engine for generating web sites. Modern web browsers rely on browser engines, to interpret and execute JavaScript and HTML to render web pages on a computer. Internet Explorer has relied on Trident (code name for MSHTML) (which has included the Chakra JavaScript Engine, see <http://en.wikipedia.org/wiki/MSHTML>); Edge relies on EdgeHTML (which also includes the Chakra JavaScript Engine, see <https://docs.microsoft.com/en-us/microsoft-edge/dev-guide>) Safari and Chrome rely on Webkit (which includes WebCore and JavaScript Core, see <http://en.wikipedia.org/wiki/WebKit>); Firefox relies on Gecko (which includes Spidermonkey, see <http://www.mozilla.org/projects/technologies.html>). The browser constructs the website according to the Document Object Model. Using the Document Object Model, modern browsers parse the HTML code that comprises web pages into objects.

Internet Explorer has relied on Trident (code name for MSHTML) (which has included the Chakra JavaScript Engine, see <http://en.wikipedia.org/wiki/MSHTML>); Edge relies on EdgeHTML (which also includes the Chakra JavaScript Engine, see <https://docs.microsoft.com/en-us/microsoft-edge/dev-guide>) Safari and Chrome rely on Webkit (which includes WebCore and JavaScript Core, see <http://en.wikipedia.org/wiki/WebKit>); Firefox relies on Gecko (which includes Spidermonkey, see <http://www.mozilla.org/projects/technologies.html>).

As shown above, the browser constructs the website according to the Document Object Model. Using the Document Object Model, modern browsers parse the HTML code that comprises web pages into objects.

The Document Object Model (DOM) connects web pages to scripts or programming languages by representing the structure of a document—such as the HTML representing a web page—in memory. Usually, that means JavaScript, although modeling HTML, SVG, or XML documents as objects are not part of the core JavaScript language, as such.

The DOM represents a document with a logical tree. Each branch of the tree ends in a node, and each node contains objects. **DOM methods allow programmatic access to the tree. With them, you can change the document's structure, style, or content.**

https://developer.mozilla.org/en-US/docs/Web/API/Document_Object_Model

The HTML DOM is a standard **object** model and **programming interface** for HTML. It defines:

- **The HTML elements as objects**
- **The properties of all HTML elements**
- The methods to access all HTML elements
- The **events** for all HTML elements

In other words: The HTML DOM is a standard for how to get, change, add, or delete HTML elements. https://www.w3schools.com/js/js_htmlDOM.asp

1 105. Salesforce was made aware of the '168 patent and its infringement thereof at least
2 as early as November 30, 2020 when Express Mobile provided notice of Salesforce's infringement
3 of the '168 patent to Marc Benioff, Chair and Chief Executive Officer and Amy Weaver, President
4 and Chief Legal Officer of Salesforce. Since at least the time Salesforce received notice,
5 Salesforce has induced others to infringe at least one claim of the '168 patent under 35 U.S.C. §
6 271(b) by, among other things, and with specific intent or willful blindness, actively aiding and
7 abetting others to infringe, including but not limited to Salesforce's clients, customers, and end
8 users, whose use of the Accused Instrumentality constitutes direct infringement of at least one
9 claim of the '168 patent. In particular, Salesforce's actions that aid and abet others such as
10 customers and end users to infringe include advertising and distributing the Accused
11 Instrumentality and providing instruction materials, training, and services regarding the Accused
12 Instrumentality. *See, e.g.* www.salesforce.com, help.salesforce.com,
13 <https://trailhead.salesforce.com>, including all related domains and subdomains. Salesforce has
14 engaged in such actions with specific intent to cause infringement or with willful blindness to the
15 resulting infringement because Salesforce has had actual knowledge of the '168 patent and
16 knowledge that its acts were inducing infringement of the '168 patent since at least the date
17 Salesforce received notice that such activities infringed the '168 patent.

18 106. Salesforce is liable as a contributory infringer of the '168 patent under 35 U.S.C. §
19 271(c) by offering to sell, selling and importing into the United States website or web page
20 authoring tools to be especially made or adapted for use in an infringement of the '168 patent. The
21 Accused Instrumentality is a material component for use in practicing the '168 patent, is
22 specifically made and is not a staple article of commerce suitable for substantial non-infringing
23 use.

24 107. Salesforce's infringement has damaged and continues to damage and injure Express
25 Mobile.

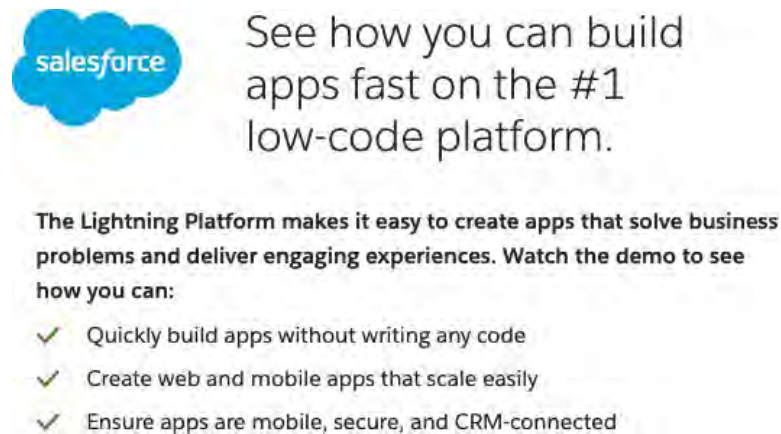

26 **COUNT III - INFRINGEMENT OF U.S. PATENT NO. 9,928,044**

27 108. Plaintiff incorporates by reference the allegations contained in paragraphs 1 to 107
28 above.

1 109. Salesforce has manufactured, sold, offered to sell, used and/or provided and
2 continues to manufacture, sell, offer for sale, use and/or provide the Lightning App Builder (the
3 “Accused Instrumentality”) that infringes, either literally or under the doctrine of equivalents, one
4 or more claims of the ’044 patent in violation of 35 U.S.C. § 271(a).

5 110. Upon information and belief, Salesforce has directly infringed at least claim 1 of
6 the ’044 patent through the Accused Instrumentality that generates code to provide content on a
7 display of a device.

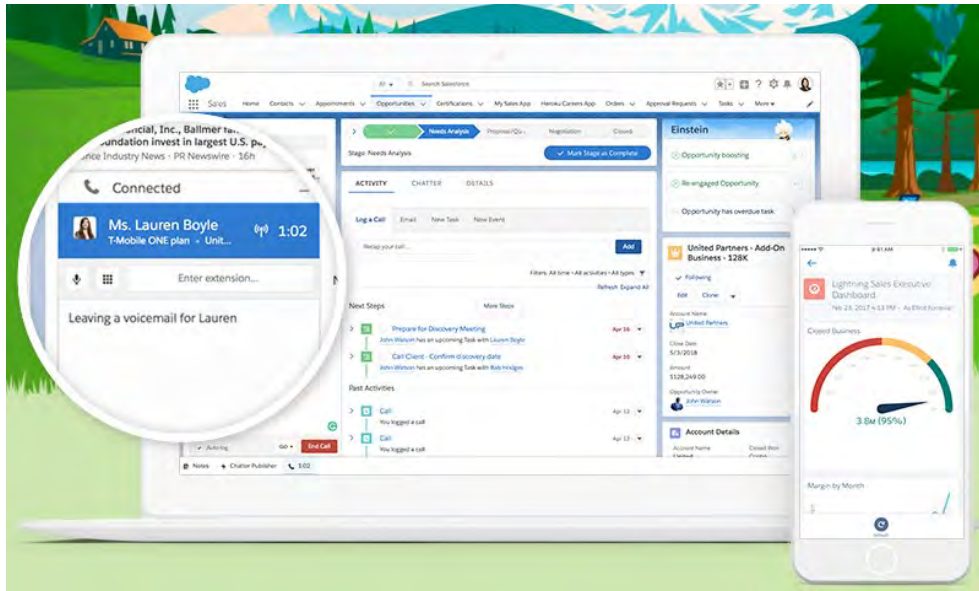

8 111. The Accused Instrumentality is a system for generating code to provide content on
9 the display of a device for each of its users.

Salesforce Platform: Lightning App Builder Demo

Source: https://www.youtube.com/watch?v=PKW4b_Hk9Hw 0:43/1:18

113. The Accused Instrumentality contains symbolic names required for evoking one or more web components each related to a set of inputs and outputs of a web service obtainable over a network, where the symbolic names are character strings that do not contain either a persistent

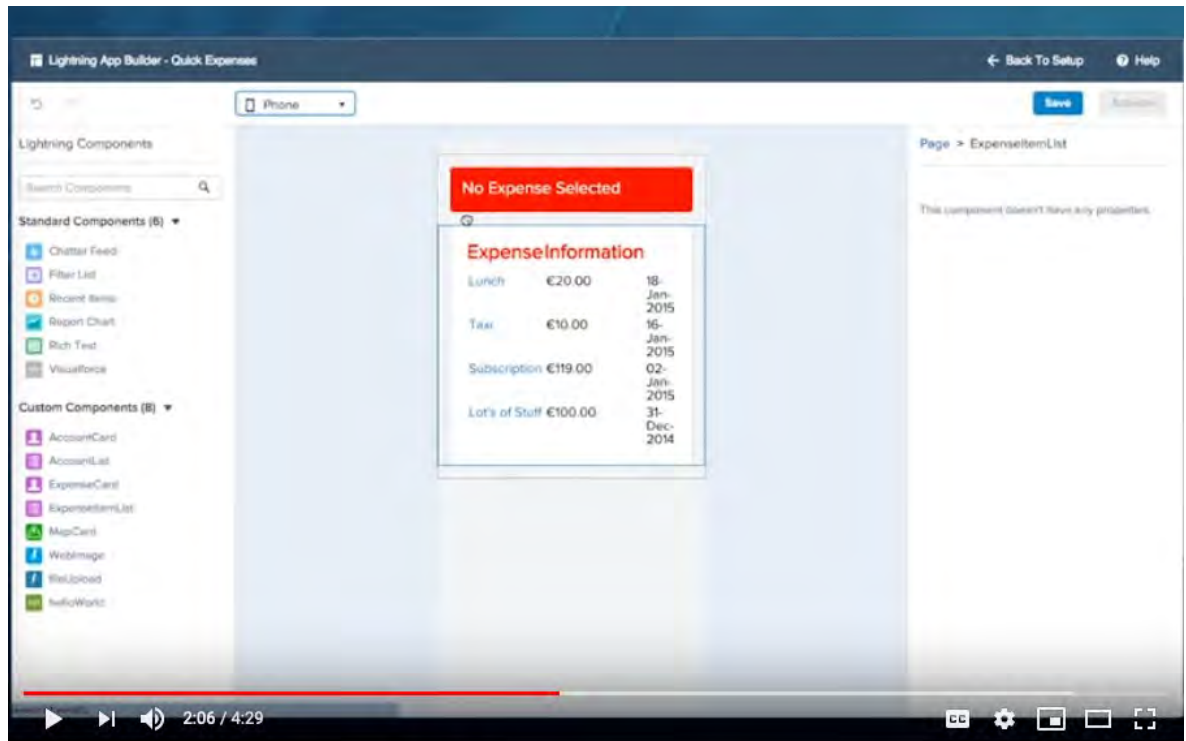

1 address or pointer to an output value accessible to the web service, where each symbolic name has
2 an associated data format class type corresponding to a subclass of User Interface (UI) objects that
3 support the data format type of the symbolic name, and where each symbolic name has a preferred
4 UI object.

5 114. The Accused Instrumentality contains symbolic names as the names of its
6 components. For example, a symbolic name is “ExpenseItemList.” The “ExpenseItemList”
7 symbolic name corresponds to the ExpenseItemList web component.

Lightning Intro Screencasts: Lightning App Builder

13 Lightning Intro Screencasts: Lightning App Builder

14 **Source:** <https://youtu.be/XMK5Huuviow> 2:06/4:29

15 115. The “ExpenseItemList” web component widget is related to a set of inputs and
16 outputs of a web service obtainable over a network, as seen by the data populated in the widget,
17 such as the first line item, “Lunch, €20.00, 18-Jan-2015.” Users of the app can add additional
18 Expense Items as inputs, and they will be reflected in the Expense Item List as outputs.

2 116. These web components require either a web browser or the Salesforce mobile app
3 to run. Salesforce publishes a list of supported browsers for the Accused Instrumentality.

	MICROSOFT* INTERNET EXPLORER*	MICROSOFT* EDGE	GOOGLE CHROME™	MOZILLA* FIREFOX*	APPLE* SAFARI*
Lightning Experience	IE 11 (EOL December 31, 2020)	Latest	Latest	Latest	12.x+
Lightning Communities	IE 11	Latest	Latest	Latest	12.x+
Special setup considerations?	No	No	No	No	No
Limitations?	Yes	Yes	No	Yes	Yes

4
5
6
7
8
9
10 **Source:** https://help.salesforce.com/articleView?id=getstart_browsers_sfx.htm

11
12 117. The Accused Instrumentality stores an address of the web service in computer
13 memory. For example, the address of the webservice in Salesforce Lightning is embedded in the
14 Component that is dragged from the AppStore and seamlessly placed in the Lightning page in the
15 app builder. For custom webservices, “MyDomain” is deployed.

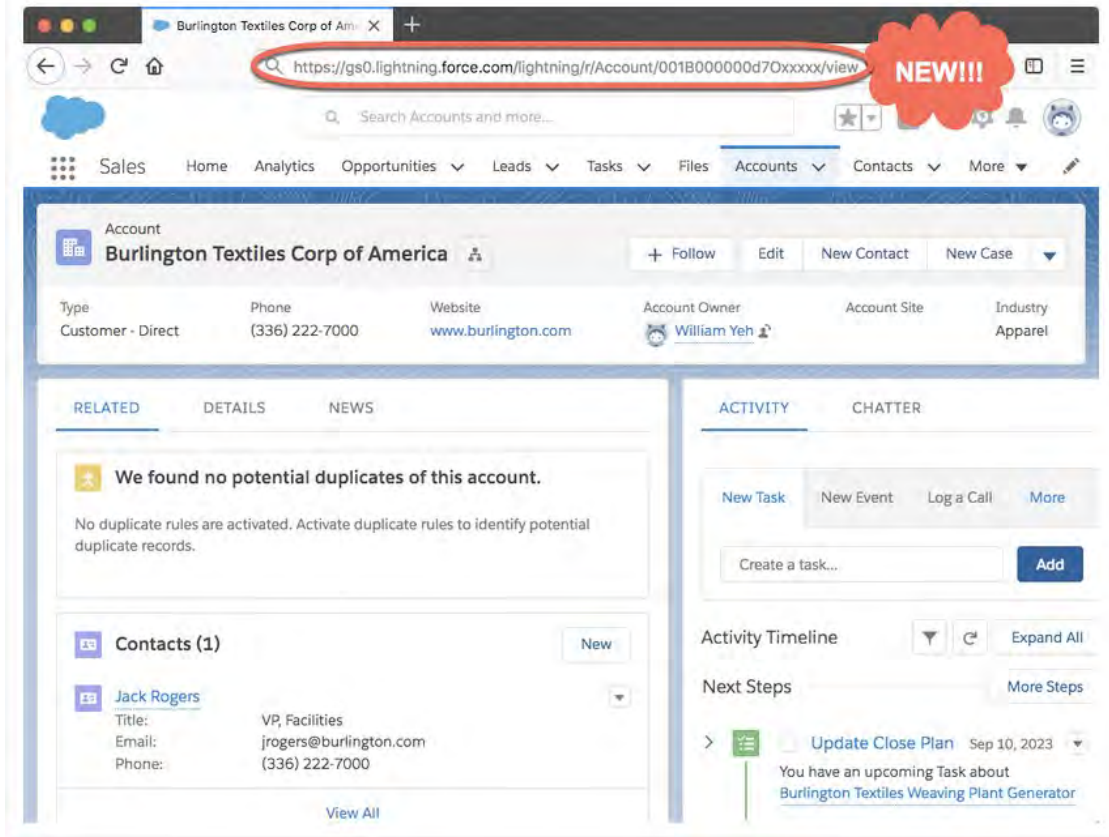

16 Your custom Lightning components don't automatically work on Lightning pages or in the Lightning App Builder. To
17 make a custom component usable in both, you need to:

- 18 1. Configure the component and its component bundle so that they're compatible with the Lightning App Builder and
Lightning pages.
- 19 2. Deploy My Domain in your org. When you deploy My Domain, references and links to Lightning resources are in the
format `https://<myDomain>.lightning.force.com`.

20 **Source:**

21 https://help.salesforce.com/articleView?id=lightning_page_components_custom.htm&type=5

22 118. As another example, the Accused Instrumentality's web pages such as the
23 “Burlington Textiles Corp of America” served to users contain addresses. These addresses are
24 stored in computer memory on at least Salesforce's servers. On information and belief, the mobile
25 app also contains the address of the web service.

120. The UI object corresponds to a web component included in the computer memory selected from a group consisting of an input of the web service and an output of the web service, where each defined UI object is either: 1) selected by a user of the authoring tool; or 2) automatically selected by the system as the preferred UI object corresponding to the symbolic name of the web component selected by the user of the authoring tool. The defined Expense Information UI object in the center of the screen corresponds to the ExpenseItemList web component on the left side of the screen. The available web components are listed next to the ExpenseItemList web components and are stored in memory on Salesforce servers.

Lightning Components Pane (3)

The components pane contains all standard and custom Lightning components that are supported for your Lightning page. Click and drag a component to add it to the page.

Tip

If you have a lot of custom components, enter text in the search field to easily find the one you need. You can access third-party custom components on the AppExchange using the button at the bottom of the pane.

Lightning Page Canvas (4)

The canvas area is where you build your page. Drag components to reorder them on the page.

Source:

https://trailhead.salesforce.com/content/learn/modules/lightning_app_builder/lightning_app_builder_intro

Deploy Files

Great. Your component works in your scratch org. Scratch orgs are useful for experimentation and development. To complete the challenge for this unit, you'll need to deploy the component files to your Dev Hub enabled org. For example, here's how you can deploy the E-Bikes demo files to your org.

1. Authenticate with your Dev Hub org (not the scratch org). You might need to log out of the scratch org, first.

```
sfdx force:auth:web:login -d -a myhuborg
```

Cop
y

2. Deploy the project files from the `ebikes-lwc` directory with the username to *log in to the Dev Hub org* (not the scratch org).

```
sfdx force:source:deploy -p force-app -u <username>
```

Cop
y

3. Set the permissions in your org.

```
sfdx force:user:permset:assign -n ebikes -u <username>
```

Cop
y

Source: <https://trailhead.salesforce.com/content/learn/modules/lightning-web-components-basics/push-lightning-web-component-files>

Lightning pages support these components:

Standard Components

Standard components are Lightning components built by Salesforce.

Custom Components

Custom components are Lightning components that you or someone else have created. You can configure custom Lightning components to work in Lightning App Builder.

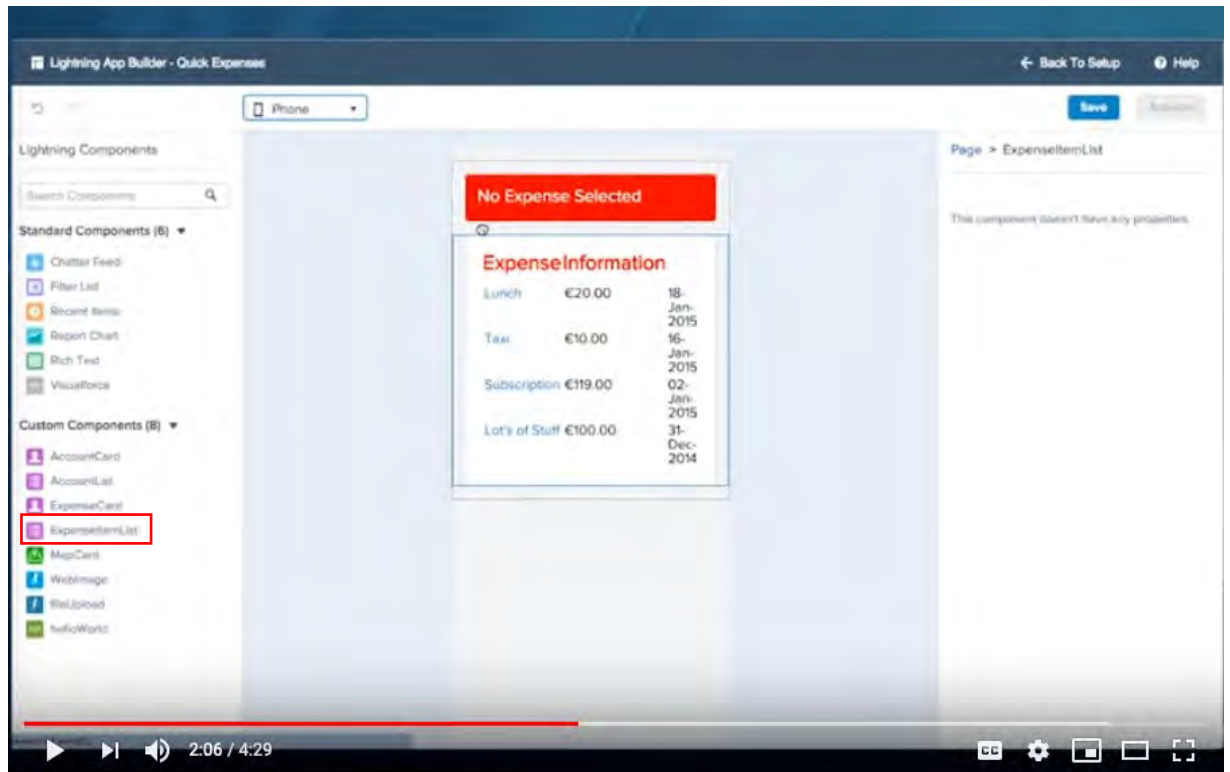

Third-Party Components on AppExchange

The AppExchange provides a marketplace for Lightning components. You can find packages containing components already configured and ready to use in the Lightning App Builder.

15
16 127. The authoring tool in the Accused Instrumentality is configured to retrieve the
17 information representative of the one or more the UI object settings stored in the database. For
18 example, the UI object Expense Information, with its object settings such as the expenses shown,
19 is retrieved from the database on Salesforce servers for the purpose of displaying the information
20 on the web site or app.

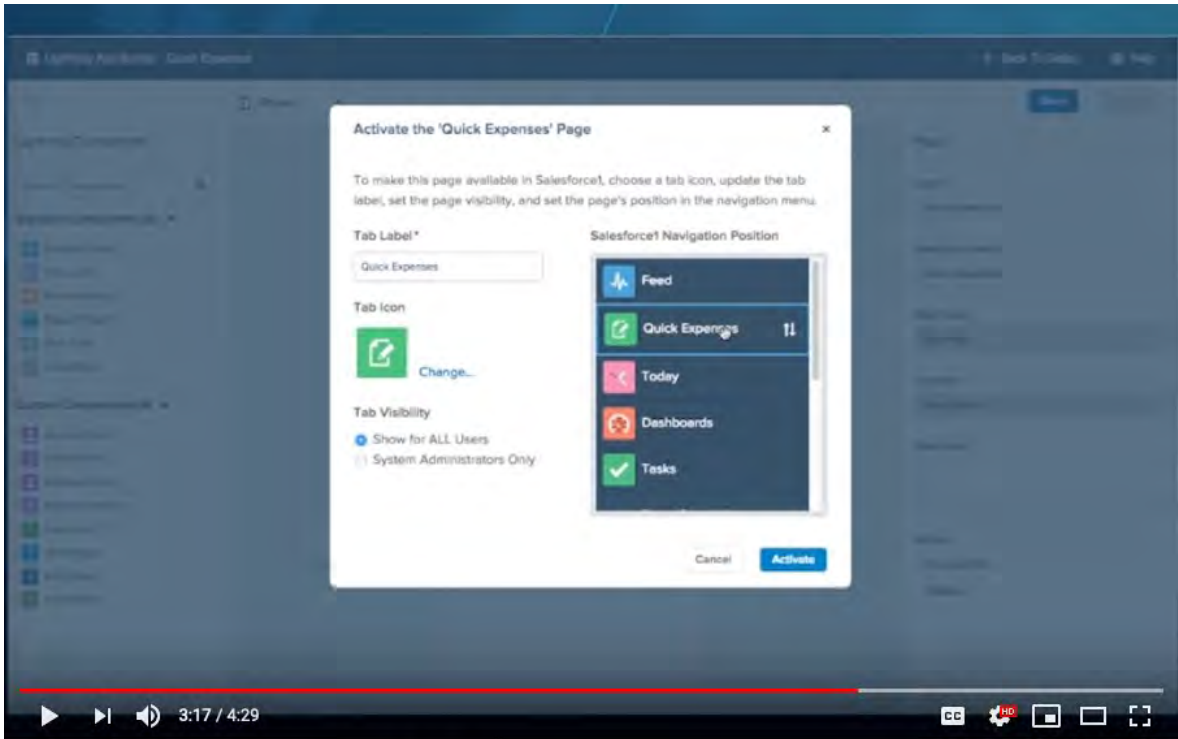

Lightning Intro Screencasts: Lightning App Builder

Source: <https://youtu.be/XMK5Huuviow> 4:20/4:29

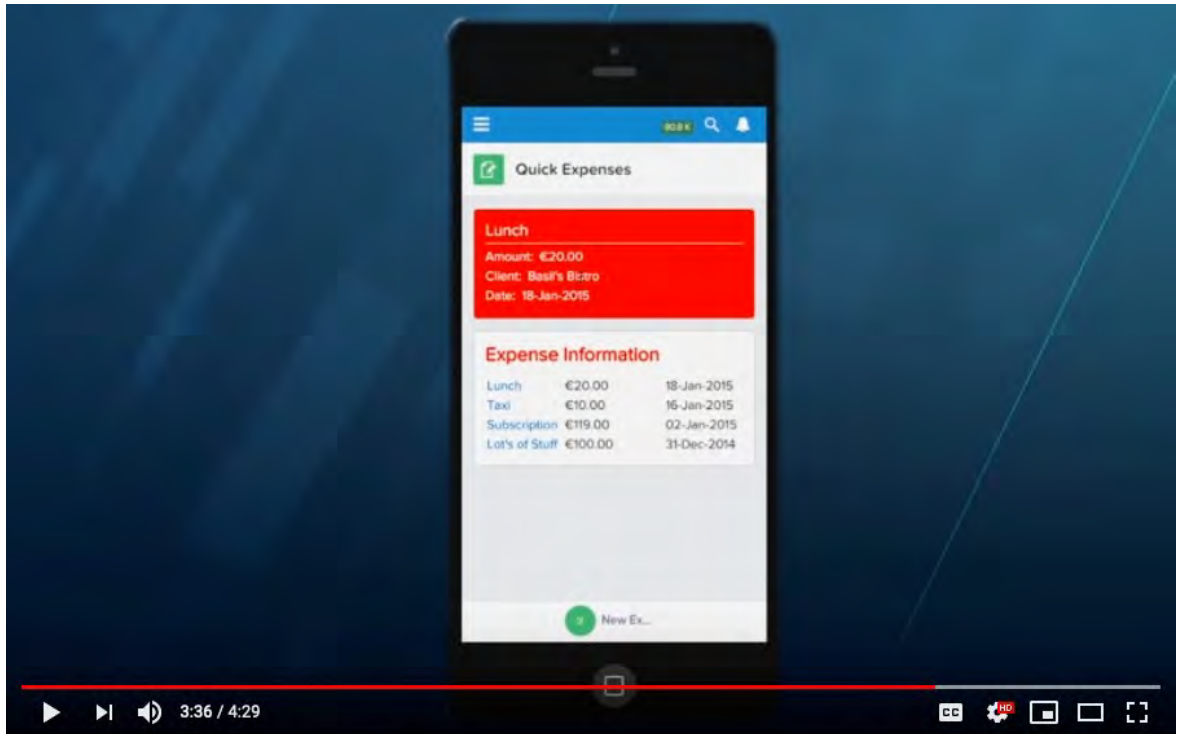

128. The authoring tool in the Accused Instrumentality is configured to build an application consisting of one or more web page views from at least a portion of the database utilizing at least one player, where the player utilizes information stored in the database to generate for the display of at least a portion of the one or more web pages when the application and player are provided to the device and executed on the device. For example, once the user clicks “save” and “activate” on the authoring tool, the application is saved and built. The authoring tool builds and delivers code that uses information stored in the database that is independent of the device that it is displayed on.

1 129. The Salesforce phone app shown consists of one or more web page views from the
 2 Salesforce server, utilizing the player embedded in the mobile app and where the app information
 3 from the Salesforce server generates the information shown, such as the Expense Information.
 4 Similarly, the app can be accessed through a web browser on a standard computer, subject to the
 5 requirements of using a supported browser. The listed web browsers rely on browser engines to
 6 interpret and execute JavaScript and HTML to render web pages on a computer. Internet Explorer
 7 has relied on Trident (code name for MSHTML) (which has included the Chakra JavaScript
 8 Engine, see <http://en.wikipedia.org/wiki/MSHTML>); Safari and Chrome rely on Webkit (which
 9 includes WebCore and JavaScript Core, see <http://en.wikipedia.org/wiki/WebKit>); Firefox relies
 10 on Gecko (which includes Spidermonkey, see
 11 <http://www.mozilla.org/projects/technologies.html>).

Supported Browsers for Lightning Experience

See the supported browsers and limitations for Lightning Experience.

Where: Lightning Experience is available in the Essentials, Group, Professional, Enterprise, Performance, Unlimited, and Developer editions.

 **NOTE**

- Salesforce doesn't support non-browser applications that embed WebView or similar controls to render content for Salesforce Classic, Lightning Experience, or Salesforce mobile web. Examples of approaches that embed this type of control include Salesforce Mobile SDK, Microsoft's WebBrowser Control, Electron's embedded Chromium browser, iOS's UIWebView and WKWebView, and Android's WebView.
- You can't access Lightning Experience in a mobile browser. Instead, we recommend using the Salesforce app when you're working on a mobile device. For a list of supported mobile browsers on Salesforce, see [Requirements for the Salesforce App](#).

132. On desktop devices, the application and player are embedded in standard web browsers.

Introducing Lightning Web Components

Now you can build Lightning components using two programming models: Lightning Web Components, and the original model, Aura Components. Lightning web components are custom HTML elements built using HTML and modern JavaScript. Lightning web components and Aura components can coexist and interoperate. To admins and end users, they both appear as Lightning components.

Lightning Web Components uses core [Web Components](#) standards and provides only what's necessary to perform well in browsers supported by Salesforce. Because built on code that runs natively in browsers, Lightning Web Components is lightweight and delivers exceptional performance. Most of the code you write is standard JavaScript and HTML.

Salesforce is committed to developing open web standards and is a member of the [World Wide Web Consortium \(W3C\)](#).

Base Lightning components are available as Aura components and as Lightning web components. The [Component Reference](#) includes documentation, specifics and examples for both. See [Base Components: Aura Vs Lightning Web Components](#) for differences between them.

Source: <https://developer.salesforce.com/docs/component-library/documentation/lwc>

Welcome to the Salesforce Mobile App

The Salesforce app is an enterprise-class mobile app that provides your users with instant access to your company's CRM data from a phone or tablet. Here are some of the reasons why the app is so awesome.

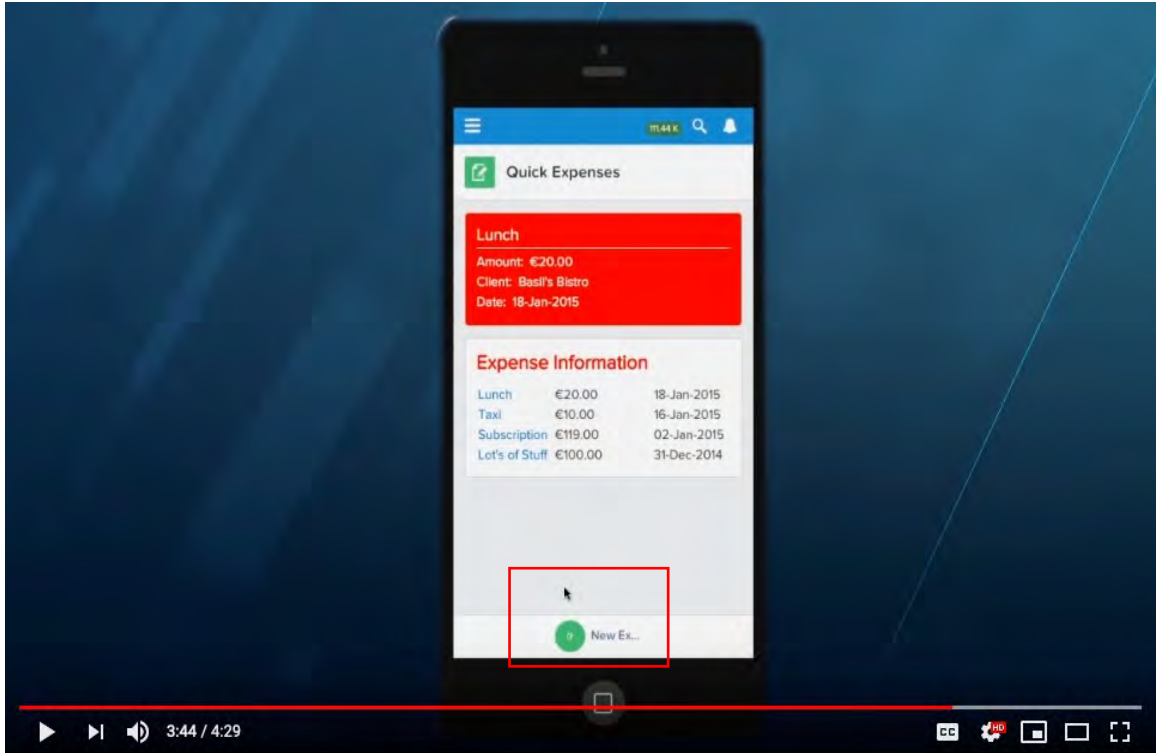

- **The mobile app is included with every Salesforce license.** Yup, you heard us correctly—it's free. Procrastinating on your mobile rollout is basically like setting piles of money on fire.
- **The app is plug-and-play,** which means users just download it from the App Store or Google Play and go. It works out of the box with no setup required. It's lightning fast, seriously. In the time it took you to read this paragraph, you could have already installed the app and logged in.
- **The app is cross platform,** so it runs on Android and iOS operating systems. Like, automatically—without you having to do any development work.
- **The app has offline capabilities.** Your mobile users won't be affected by capricious cellular signals, FAA regulations, subway commutes, or bunker-style buildings.
- **It isn't just an app. It's a platform.** Because the app is powered by the Salesforce platform, it's infinitely customizable. You can use point-and-click tools to make it your own.

27 Introduction to Salesforce Lightning

28 **Source:** https://www.youtube.com/watch?v=s_sHeac3gfo 0:34/1:47

1 139. Salesforce was made aware of the '044 patent and its infringement thereof at least
2 as early as November 30, 2020 when Express Mobile provided notice of Salesforce's infringement
3 of the '044 patent to Marc Benioff, Chair and Chief Executive Officer and Amy Weaver, President
4 and Chief Legal Officer of Salesforce. Since at least the time Salesforce received notice,
5 Salesforce has induced others to infringe at least one claim of the '044 patent under 35 U.S.C. §
6 271(b) by, among other things, and with specific intent or willful blindness, actively aiding and
7 abetting others to infringe, including but not limited to Salesforce's clients, customers, and end
8 users, whose use of the Accused Instrumentality constitutes direct infringement of at least one
9 claim of the '044 patent. In particular, Salesforce's actions that aid and abet others such as
10 customers and end users to infringe include advertising and distributing the Accused
11 Instrumentality and providing instruction materials, training, and services regarding the Accused
12 Instrumentality. *See e.g.,* www.salesforce.com, help.salesforce.com,
13 <https://trailhead.salesforce.com>, including all related domains and subdomains. Salesforce has
14 engaged in such actions with specific intent to cause infringement or with willful blindness to the
15 resulting infringement because Salesforce has had actual knowledge of the '044 patent and
16 knowledge that its acts were inducing infringement of the '044 patent since at least the date
17 Salesforce received notice that such activities infringed the '044 patent.

18 140. Salesforce is liable as a contributory infringer of the '044 patent under 35 U.S.C. §
19 271(c) by offering to sell, selling and importing into the United States website or web page
20 authoring tools to be especially made or adapted for use in an infringement of the '044 patent. The
21 Accused Instrumentality is a material component for use in practicing the '044 patent, is
22 specifically made and is not a staple article of commerce suitable for substantial non-infringing
23 use.

24 141. Salesforce's infringement has damaged and continues to damage and injure Express
25 Mobile.
26
27
28

COUNT IV - INFRINGEMENT OF U.S. PATENT NO. 9,471,287

142. Plaintiff incorporates by reference the allegations contained in paragraphs 1 to 141 above.

143. Salesforce has manufactured, sold, offered to sell, used and/or provided and continues to manufacture, sell, offer for sale, use and/or provide the Lightning App Builder which is a system for generating code to provide content on a display of a device (the “Accused Instrumentality”) which infringes, either literally or under the doctrine of equivalents, one or more claims of the ’287 patent in violation of 35 U.S.C. § 271(a).

144. The Accused Instrumentality is a system for generating code to provide content on a display of a device.

See how you can build apps fast on the #1 low-code platform.

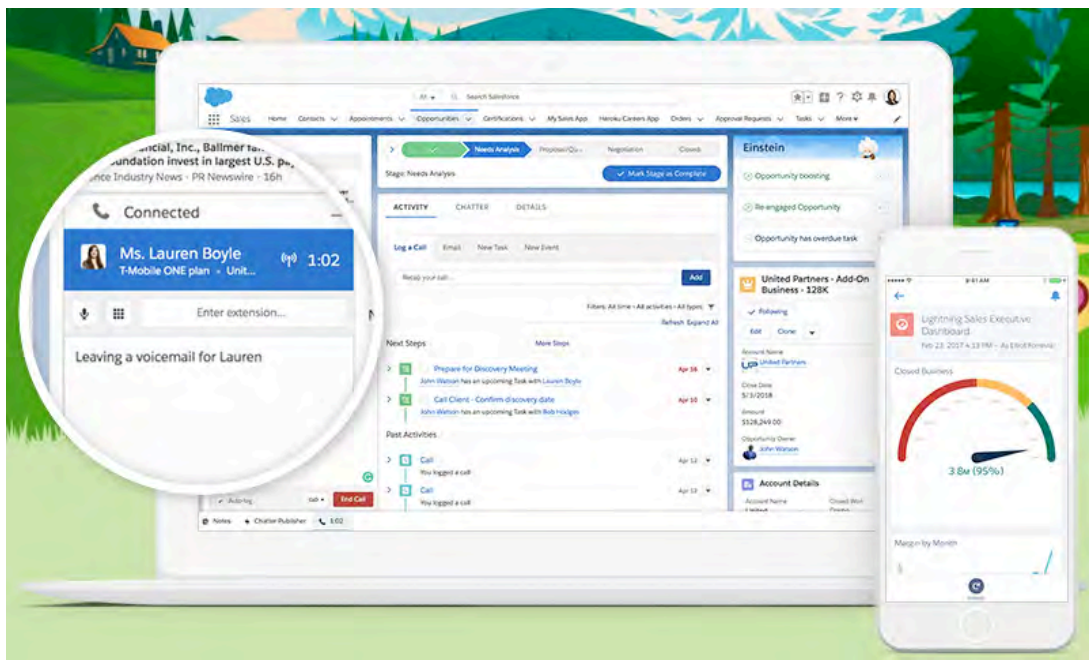

The Lightning Platform makes it easy to create apps that solve business problems and deliver engaging experiences. Watch the demo to see how you can:

- ✓ Quickly build apps without writing any code
- ✓ Create web and mobile apps that scale easily
- ✓ Ensure apps are mobile, secure, and CRM-connected

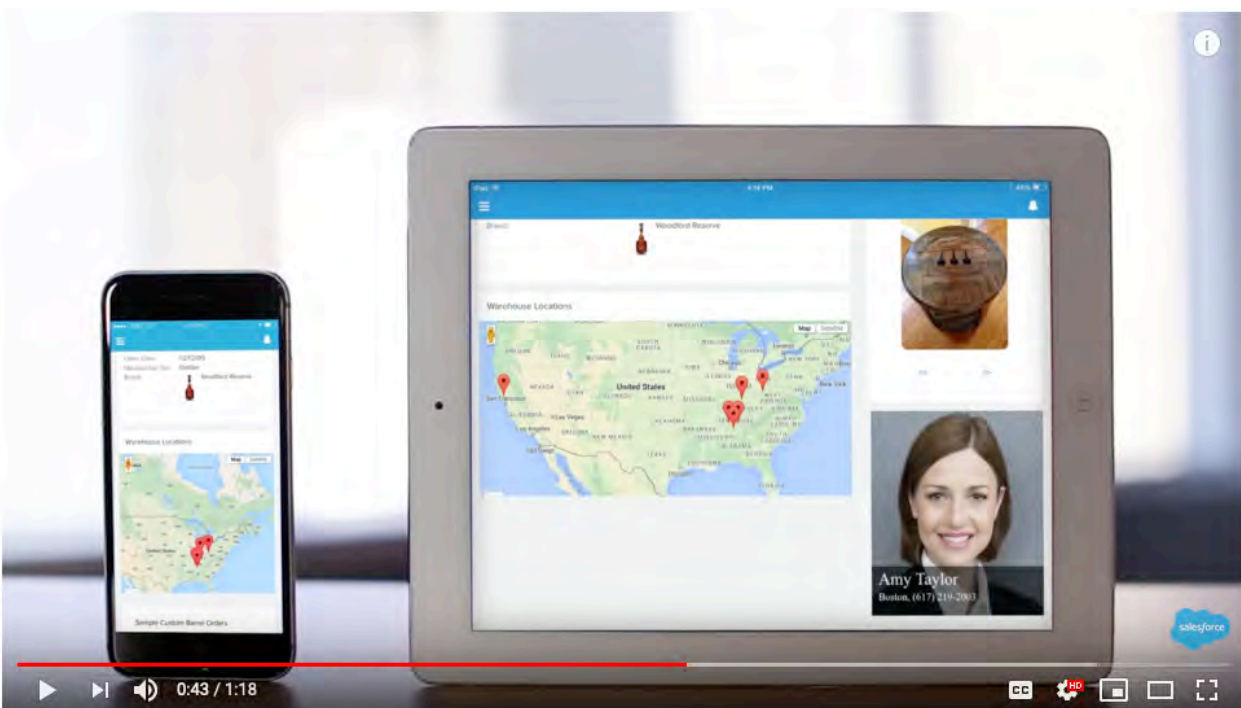

Source: <https://www.salesforce.com/form/demo/platform-lightning-demo-sem/>

145. The Accused Instrumentality stores items in computer memory in order to serve web pages and apps to devices.

Source: https://www.youtube.com/watch?v=PKW4b_Hk9Hw 0:43/1:18

146. The Accused Instrumentality contains symbolic names required for evoking one or more web components each related to a set of inputs and outputs of a web service obtainable over

1 a network, where the symbolic names are character strings that do not contain either a persistent
2 address or pointer to an output value accessible to the web service, where each symbolic name has
3 an associated data format class type corresponding to a subclass of User Interface (UI) objects that
4 support the data format type of the symbolic name, and where each symbolic name has a preferred
5 UI object. The Accused Instrumentality contains symbolic names as the names of its components.
6 For example, the symbolic name “ExpenseItemList” is seen below.

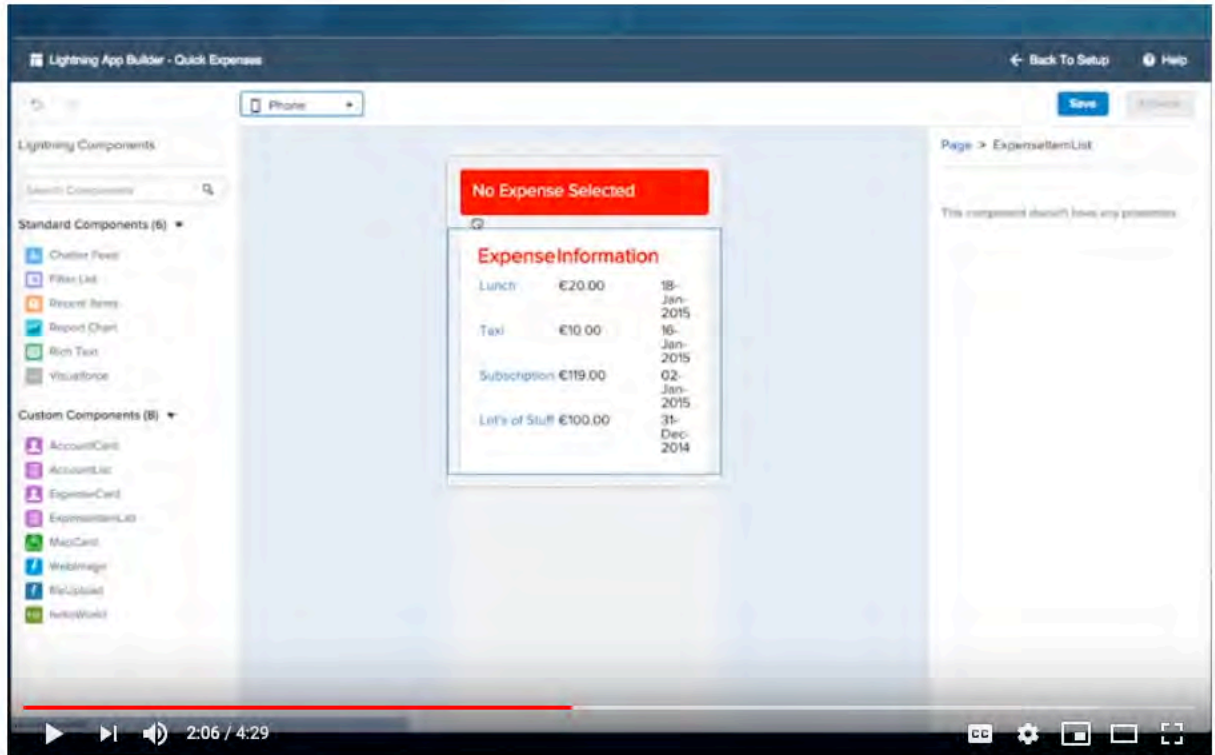

19 Lightning Intro Screencasts: Lightning App Builder

20 **Source:** <https://youtu.be/XMK5Huuviow> 2:04/4:29

21

22 147. The “ExpenseItemList” symbolic name corresponds to the ExpenseItemList web
23 component.

6
7
8
9
10 **Source:** https://help.salesforce.com/articleView?id=getstart_browsers_sfx.htm

11 150. The address of the web service in the Accused Instrumentality is embedded in the
12 Component that is dragged from the AppStore and seamlessly placed in the Accused
13 Instrumentality's pages in the app builder.

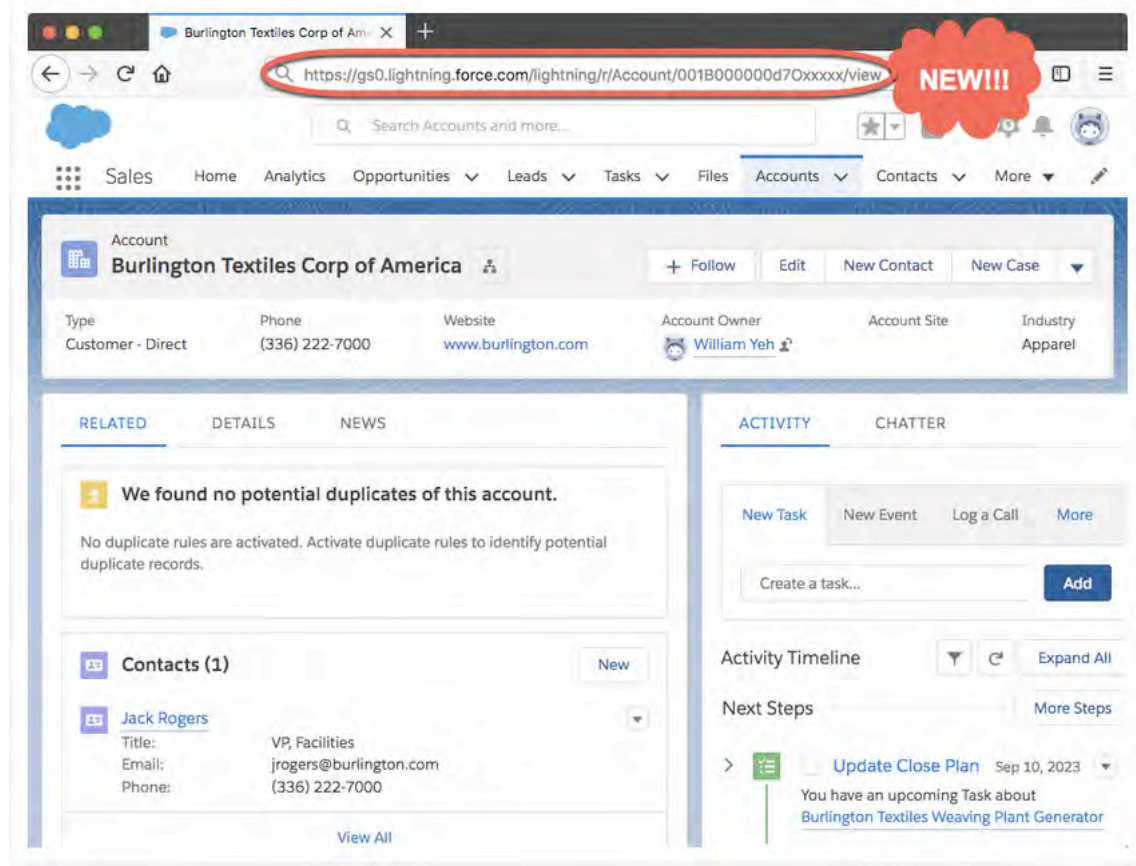

14 Your custom Lightning components don't automatically work on Lightning pages or in the Lightning App Builder. To
15 make a custom component usable in both, you need to:

- 16 1. Configure the component and its component bundle so that they're compatible with the Lightning App Builder and
17 Lightning pages.
- 18 2. Deploy My Domain in your org. When you deploy My Domain, references and links to Lightning resources are in the
19 format <https://<myDomain>.lightning.force.com>.

20 https://help.salesforce.com/articleView?id=lightning_page_components_custom.htm&type=5

21 151. The Accused Instrumentality stores an address of the web service and stores it in
22 computer memory. For example, the Accused Instrumentality's web pages such as the "Burlington
23 Textiles Corp of America" served to users contain addresses. These addresses are stored in
24 computer memory on at least Salesforce's servers. On information and belief, the mobile app also
25 contains the address of the web service.

Lightning Intro Screencasts: Lightning App Builder

Source: <https://youtu.be/XMK5Huuviow> 2:04/4:29

155. Other defined UI objects, such as Standard Components, might be automatically selected by the system as the preferred UI object corresponding to the symbolic name of the web component selected by the user of the authoring tool.

The screenshot shows the Lightning App Builder interface for a page titled "Top Accounts and Opportunities". The interface is divided into several sections:

- Top Navigation:** "Lightning App Builder" and "Pages" dropdown.
- Toolbar:** Navigation icons (back, forward, home, search), "Tablet - Landscape" view selector, "Shrink To View", "Refresh", "Save", and "Activation..." buttons.
- Lightning Components Pane (3):** A list of components categorized into "Standard (11)" (Chatter Feed, Chatter Publisher, Dashboard, Flow, List View, Quip, Quip Document, Recent Items, Report Chart, Rich Text, Visualforce) and "Custom (1)" (Opportunity Alert). A "Custom - Managed (0)" section is also present with the note "No components available." A "Get more on the AppExchange" button is at the bottom.
- Canvas Area (4):** Displays data for "Platinum and Gold SLA Customers" (3+ items, sorted by Account Name). It lists accounts like Barbary Coast Wireless, Burlington Textiles Corp of America, and Dickenson plc. It also shows "Opportunity Alerts" for "Burlington Textiles Weaving Plant Generator" and "Pyramid Emergency Generators", and "Recent Items (3)" including "Burlington Textiles Weaving Plant Gener...", "Burlington Textiles Corp of America", and "Grand Hotels & Resorts Ltd".
- Configuration Pane (5):** Fields for "Label" (Top Accounts and Opportunities), "Developer Name" (Top_Accounts_and_Opportunities), "Page Type" (App Page), "Template" (Two Regions), and "Description". An "Actions" section includes "Log a Call, New Account, New Opportunity" and a "Select..." button.

Source:

https://trailhead.salesforce.com/content/learn/modules/lightning_app_builder/lightning_app_builder_intro

Lightning Components Pane (3)

The components pane contains all standard and custom Lightning components that are supported for your Lightning page. Click and drag a component to add it to the page.

Tip

If you have a lot of custom components, enter text in the search field to easily find the one you need. You can access third-party custom components on the AppExchange using the button at the bottom of the pane.

Lightning Page Canvas (4)

The canvas area is where you build your page. Drag components to reorder them on the page.

Source:

https://trailhead.salesforce.com/content/learn/modules/lightning_app_builder/lightning_app_builder_intro

1 156. Custom Components are uploaded and saved on Salesforce servers.

2 **Deploy Files**

3 Great. Your component works in your scratch org. Scratch orgs are useful for experimentation and development. To
4 complete the challenge for this unit, you'll need to deploy the component files to your Dev Hub enabled org. For example,
here's how you can deploy the E-Bikes demo files to your org.

5 1. Authenticate with your Dev Hub org (not the scratch org). You might need to log out of the scratch org, first.

6 `sfdx force:auth:web:login -d -a myhuborg` Cop y

7 2. Deploy the project files from the `ebikes-lwc` directory with the username to *log in to the Dev Hub org* (not the scratch
8 org).

9 `sfdx force:source:deploy -p force-app -u <username>` Cop y

10 3. Set the permissions in your org.

11 `sfdx force:user:permset:assign -n ebikes -u <username>` Cop y

11 **Source:** <https://trailhead.salesforce.com/content/learn/modules/lightning-web-components-basics/push-lightning-web-component-files>

12

13 157. Standard Components and third-party created Components are both stored on
14 Salesforce servers. Standard Components are available on all projects, and third-party created
15 Components can be added through Salesforce's "AppExchange."

16 Lightning pages support these components:

17 **Standard Components**
Standard components are Lightning components built by Salesforce.

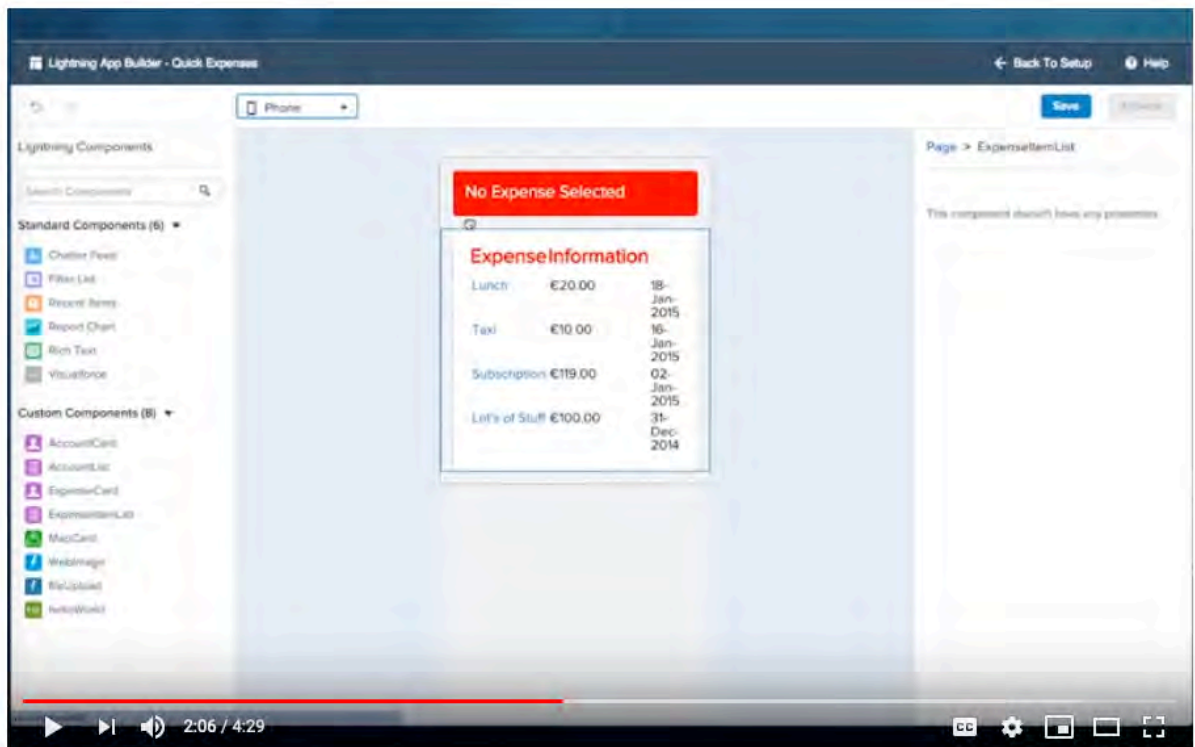

18 **Custom Components**
Custom components are Lightning components that you or someone else have created. You can configure custom
19 Lightning components to work in Lightning App Builder.

20 **Third-Party Components on AppExchange**
The AppExchange provides a marketplace for Lightning components. You can find packages containing components
21 already configured and ready to use in the Lightning App Builder.

22 **Source:**
23 [https://trailhead.salesforce.com/content/learn/modules/lightning_app_builder/lightning_app_build
24 er_intro](https://trailhead.salesforce.com/content/learn/modules/lightning_app_builder/lightning_app_builder_intro)

25 158. The authoring tool in the Accused Instrumentality is configured to associate the
26 selected symbolic name with the defined UI object, where the selected symbolic name is only
27 available to UI objects that support the defined data format associated with that symbolic name.
28 For example, the authoring tool associates the "ExpenseItemList" symbolic name with the defined

1 UI object, where the symbolic name is only available to UI objects that support the data of the
2 ExpenseItemList.

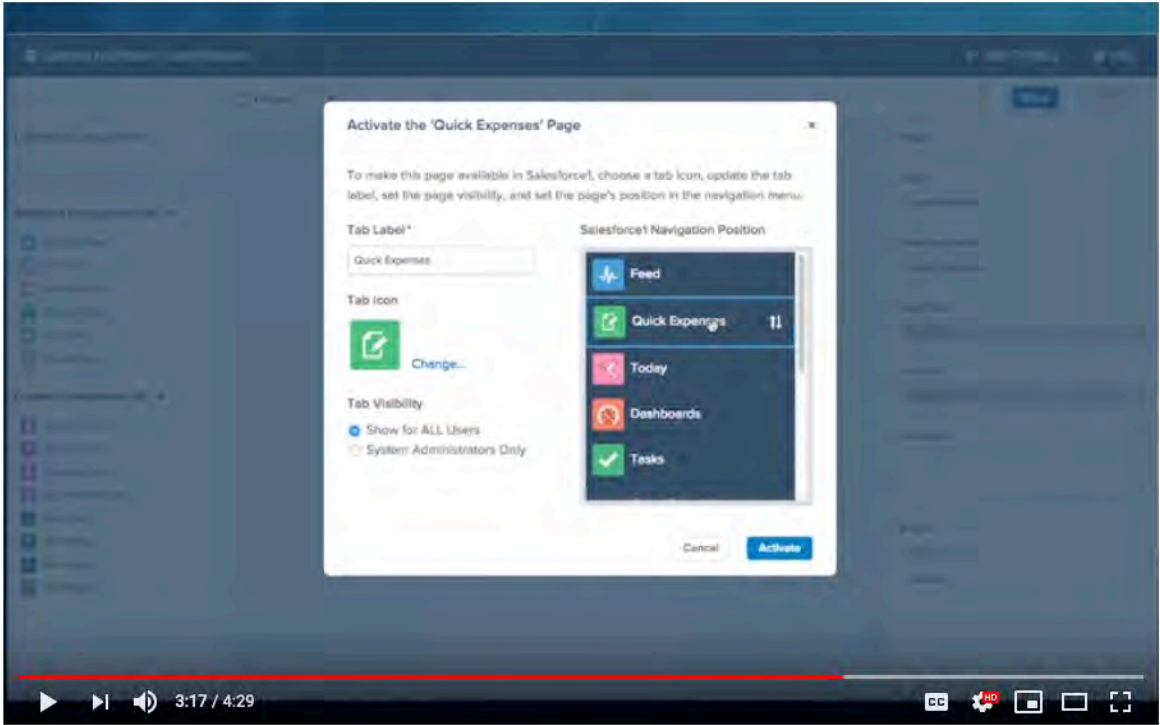

15 Lightning Intro Screencasts: Lightning App Builder

16 **Source:** <https://youtu.be/XMK5Huuviow> 2:06/4:29

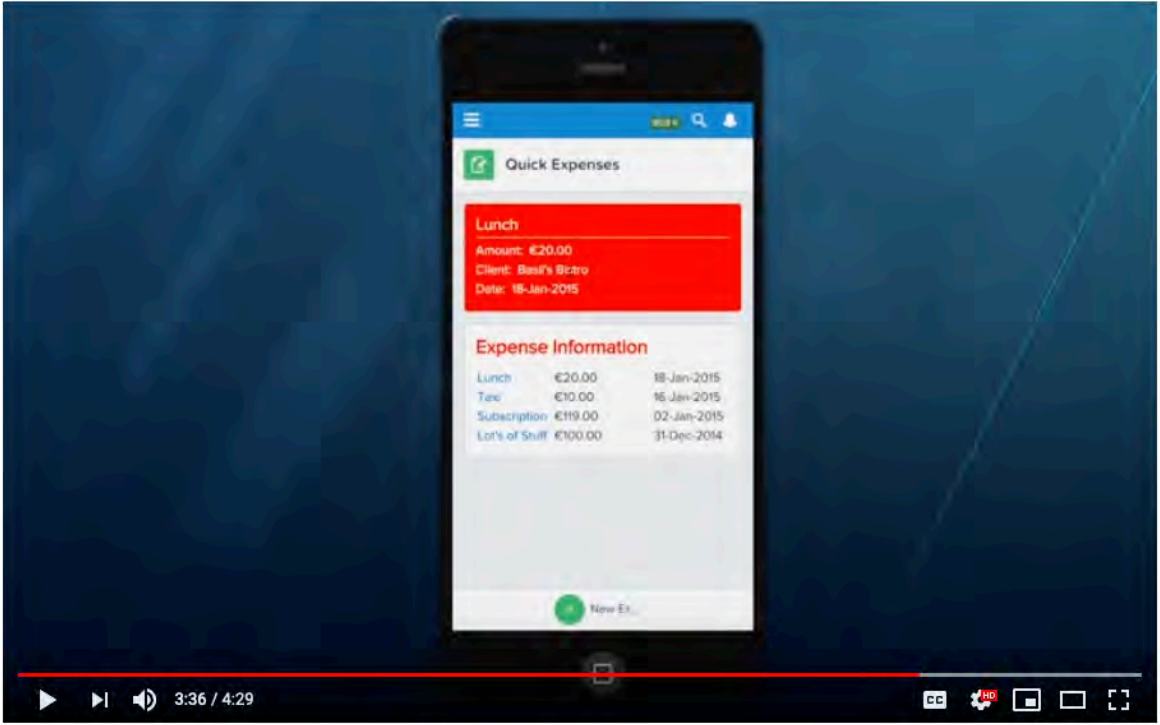

17
18 159. The authoring tool in the Accused Instrumentality is configured to build an
19 application consisting of one or more web page views from at least a portion of the database
20 utilizing at least one player, where the player utilizes information stored in the database to
21 generate for the display of at least a portion of the one or more web pages and the application and
22 player are provided to the device and executed on the device. For example, once the user clicks
23 “save” and “activate” on the authoring tool, the application is saved and built. The authoring tool
24 builds and delivers application code that uses information stored in the database that is
25 independent of the device that it is displayed on.

Lightning Intro Screencasts: Lightning App Builder

Source: https://help.salesforce.com/articleView?id=aura_features.htm&type=5

1 160. The Salesforce phone app shown consists of one or more web page views from the
2 Salesforce server, utilizing the player embedded in the mobile app, where the app information from
3 the Salesforce server is used to generate the information shown, such as the Expense Information.
4 The player consists of device-dependent code or code that is specific to the operating system,
5 programming language, or platform of the client device (e.g., “device-aware”).

6 Why Use the Lightning Component Framework?

7 There are many benefits of using the Lightning Component framework to build components and apps.

8 Device-aware and Cross Browser Compatibility

9 Apps use responsive design and support the latest in browser technology such as HTML5, CSS3, and touch events.

10 **Source:** https://help.salesforce.com/articleView?id=aura_features.htm&type=5

11 Welcome to the Salesforce Mobile App

12 The Salesforce app is an enterprise-class mobile app that provides your users with instant access to your company's CRM
13 data from a phone or tablet. Here are some of the reasons why the app is so awesome.

- 14 • **The mobile app is included with every Salesforce license.** Yup, you heard us correctly—it's free. Procrastinating on
15 your mobile rollout is basically like setting piles of money on fire.
- 16 • **The app is plug-and-play,** which means users just download it from the App Store or Google Play and go. It works out
17 of the box with no setup required. It's lightning fast, seriously. In the time it took you to read this paragraph, you could
18 have already installed the app and logged in.
- 19 • **The app is cross platform,** so it runs on Android and iOS operating systems. Like, automatically—without you having to
20 do any development work.
- 21 • **The app has offline capabilities.** Your mobile users won't be affected by capricious cellular signals, FAA regulations,
22 subway commutes, or bunker-style buildings.
- 23 • **It isn't just an app. It's a platform.** Because the app is powered by the Salesforce platform, it's infinitely customizable.
24 You can use point-and-click tools to make it your own.

25 **Source:**

26 https://trailhead.salesforce.com/content/learn/modules/salesforce1_mobile_app/salesforce1_mobile_app_intro

27 161. Similarly, the app can be accessed through a web browser on a standard computer,
28 subject to the requirements of using a supported browser. The listed web browsers rely on browser
engines to interpret and execute JavaScript and HTML to render web pages on a computer. Internet
Explorer has relied on Trident (code name for MSHTML) (which has included the Chakra
JavaScript Engine, see <http://en.wikipedia.org/wiki/MSHTML>); Safari and Chrome rely on
Webkit (which includes WebCore and JavaScript Core, see <http://en.wikipedia.org/wiki/WebKit>);

1 Firefox relies on Gecko (which includes Spidermonkey, see
 2 <http://www.mozilla.org/projects/technologies.html>).

3 Supported Browsers for Lightning Experience

4 See the supported browsers and limitations for Lightning Experience.

5 **Where:** Lightning Experience is available in the Essentials, Group, Professional, Enterprise, Performance, Unlimited, and
 6 Developer editions.

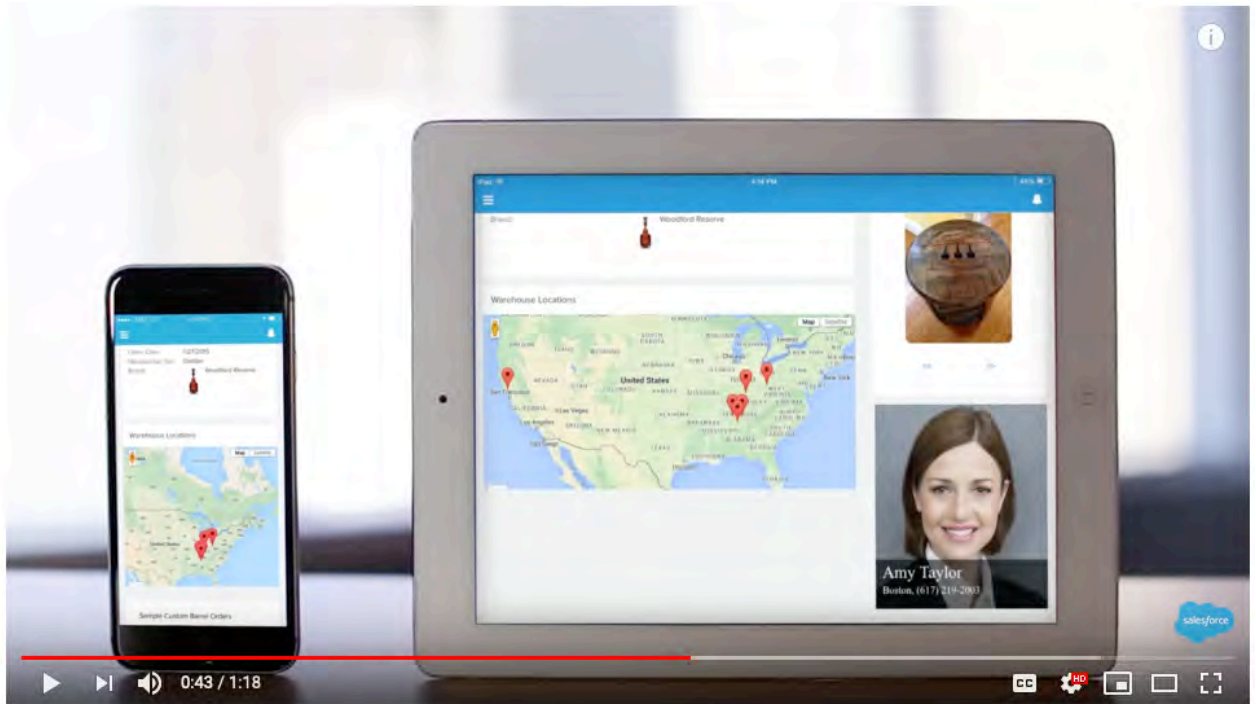

7 NOTE

- 8 • Salesforce doesn't support non-browser applications that embed WebView or similar controls to render content for Salesforce Classic, Lightning Experience, or Salesforce mobile web. Examples of approaches that embed this type of control include Salesforce Mobile SDK, Microsoft's WebBrowser Control, Electron's embedded Chromium browser, iOS's UIWebView and WKWebView, and Android's WebView.
- 9 • You can't access Lightning Experience in a mobile browser. Instead, we recommend using the Salesforce app when you're working on a mobile device. For a list of supported mobile browsers on Salesforce, see [Requirements for the Salesforce App](#).

14 **Source:** https://www.youtube.com/watch?v=PKW4b_Hk9Hw 0:43/1:18

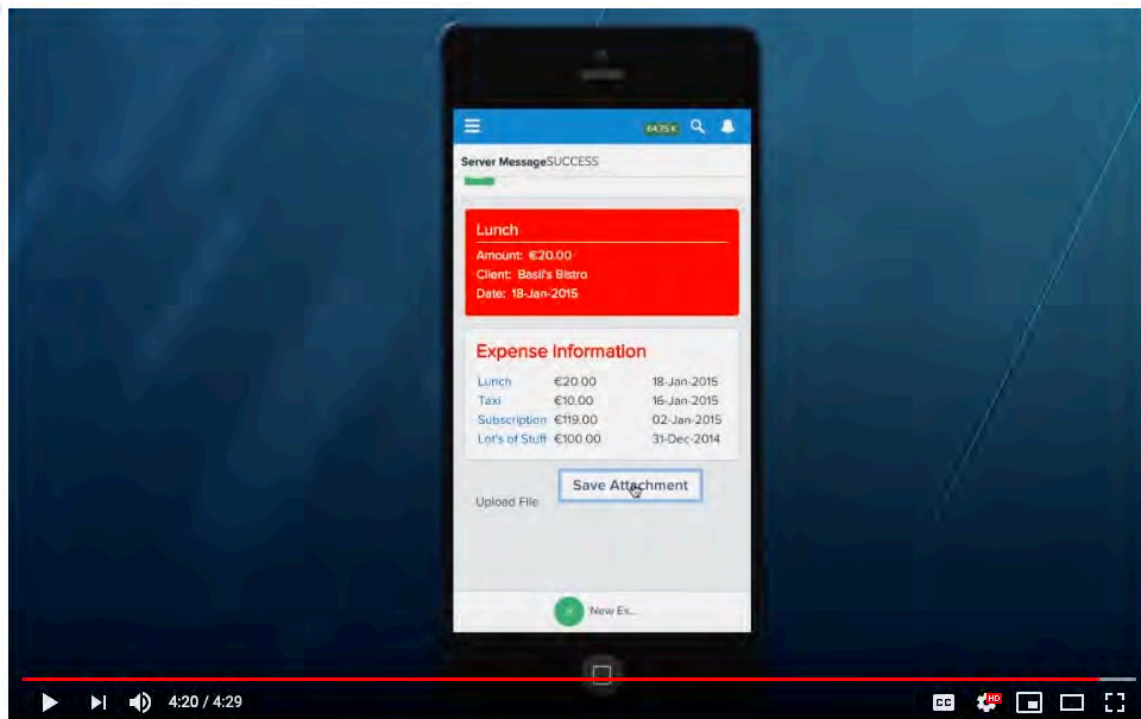

15 162. When the user of the device provides one or more input values associated with an
16 input symbolic name to an input of the defined UI object. The device provides the user provided
17 one or more input values and corresponding input symbolic name to the Salesforce Lightning web
18 service. The web service utilizes the input symbolic name and the user provided one or more input
19 values for generating one or more output values having an associated output symbolic name. The
20 player receives the output symbolic name and corresponding one or more output values and
21 provides instructions for the display of the device to present an output value in the defined UI
22 object. For example, the web service will use the user's input values for generating output values
23 and return data to the player for generating a confirmation "SUCCESS" message after the user has
24 uploaded a receipt.

1 164. As another example, the web service will use the user’s input values for generating
 2 output values and return data to the player to verify that a call placed through the system was
 3 logged with output symbolic name “Call logged.”

Introduction to Salesforce Lightning

Source: https://www.youtube.com/watch?v=s_sHeac3gfo 0:34/1:47

Introduction to Salesforce Lightning

Source: https://www.youtube.com/watch?v=s_sHeac3gfo 0:34/1:47

1 165. Salesforce was made aware of the '287 patent and its infringement thereof at least
2 as early as November 30, 2020 when Express Mobile provided notice of Salesforce's
3 infringement of the '287 patent to Marc Benioff, Chair and Chief Executive Officer and Amy
4 Weaver, President and Chief Legal Officer of Salesforce. Since at least the time Salesforce
5 received notice, Salesforce has induced others to infringe at least one claim of the '287 patent
6 under 35 U.S.C. § 271(b) by, among other things, and with specific intent or willful blindness,
7 actively aiding and abetting others to infringe, including but not limited to Salesforce's clients,
8 customers, and end users, whose use of the Accused Instrumentality constitutes direct
9 infringement of at least one claim of the '287 patent. In particular, Salesforce's actions that aid
10 and abet others such as customers and end users to infringe include advertising and distributing
11 the Accused Instrumentality and providing instruction materials, training, and services regarding
12 the Accused Instrumentality. *See e.g.*, www.salesforce.com, help.salesforce.com,
13 <https://trailhead.salesforce.com> , including all related domains and subdomains. Salesforce has
14 engaged in such actions with specific intent to cause infringement or with willful blindness to the
15 resulting infringement because Salesforce has had actual knowledge of the '287 patent and
16 knowledge that its acts were inducing infringement of the '287 patent since at least the date
17 Salesforce received notice that such activities infringed the '287 patent.

18 166. Salesforce is liable as a contributory infringer of the '287 patent under 35 U.S.C.
19 § 271(c) by offering to sell, selling and importing into the United States website or web page
20 authoring tools to be especially made or adapted for use in an infringement of the '287 patent.
21 The Accused Instrumentality is a material component for use in practicing the '287 patent, is
22 specifically made and is not a staple article of commerce suitable for substantial non-infringing
23 use.

24 167. Salesforce's infringement has damaged and continues to damage and injure
25 Express Mobile.

26 **COUNT V - INFRINGEMENT OF U.S. PATENT NO. 9,063,755**

27 168. Plaintiff incorporates by reference the allegations contained in paragraphs 1 to
28 167 above.

1 169. Salesforce has manufactured, sold, offered to sell, used and/or provided and
2 continues to manufacture, sell, offer for sale, use and/or provide the Lightning App Builder
3 which is a system for generating code to provide content on a display of a device (the “Accused
4 Instrumentality”) which infringes, either literally or under the doctrine of equivalents, one or
5 more claims of the ’755 patent in violation of 35 U.S.C. § 271(a).

6 170. The Accused Instrumentality is a website and app building tool that allows users
7 to “quickly build apps without writing any code” and “create web and mobile apps.”

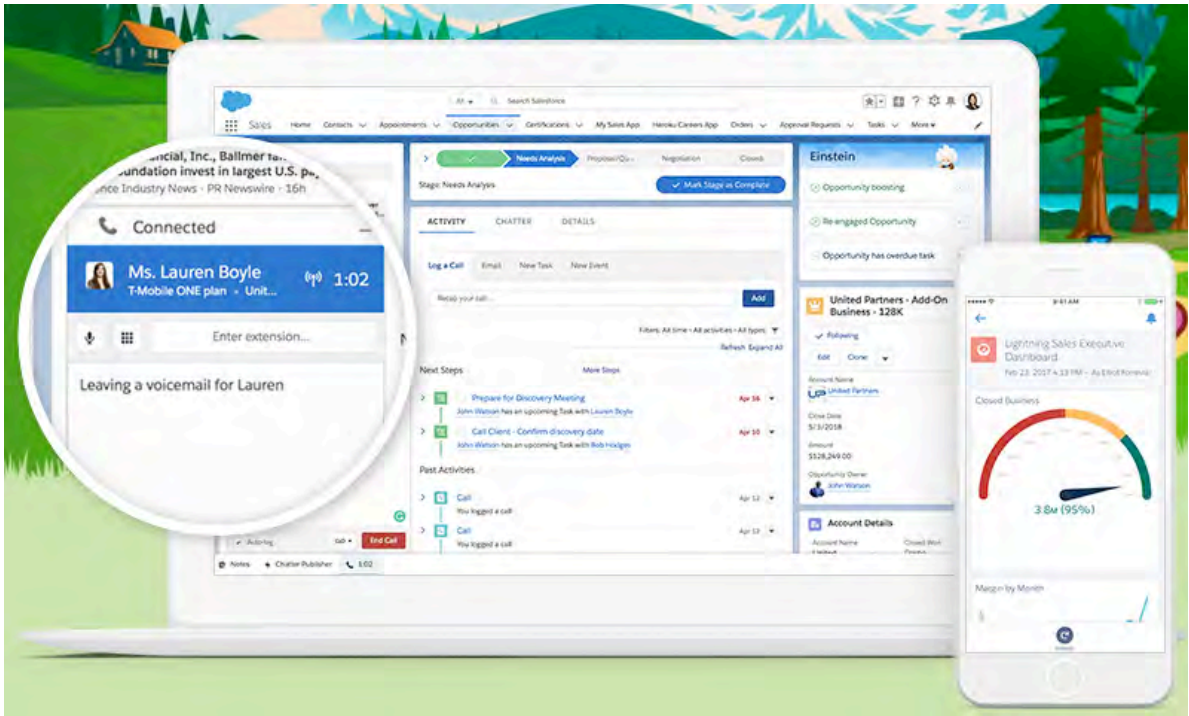

10 See how you can build
11 apps fast on the #1
12 low-code platform.

13 **The Lightning Platform makes it easy to create apps that solve business
14 problems and deliver engaging experiences. Watch the demo to see
15 how you can:**

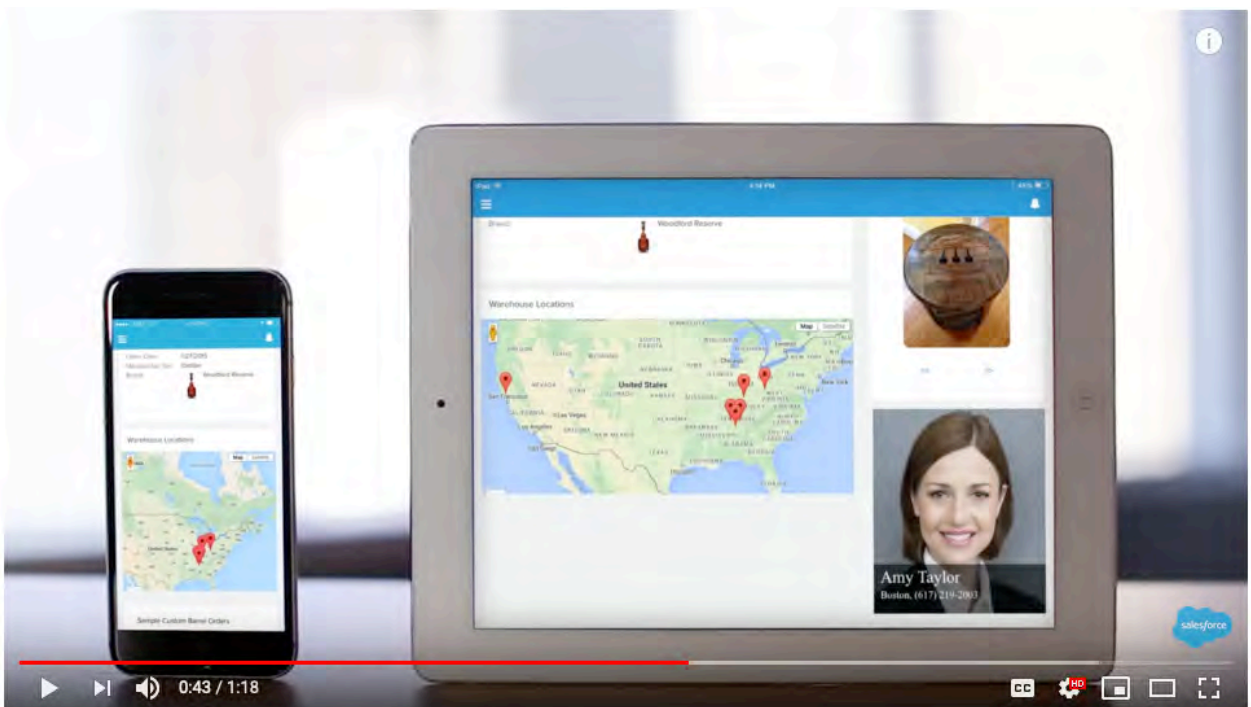

- 16 ✓ Quickly build apps without writing any code
- 17 ✓ Create web and mobile apps that scale easily
- 18 ✓ Ensure apps are mobile, secure, and CRM-connected

19 **Source:** <https://www.salesforce.com/form/demo/platform-lightning-demo-sem/>

20 171. The Accused Instrumentality stores items in computer memory in order to serve
21 web pages and apps to devices.

Source: Salesforce Platform: Lightning App Builder Demo.
https://www.youtube.com/watch?v=PKW4b_Hk9Hw 0:43/1:18

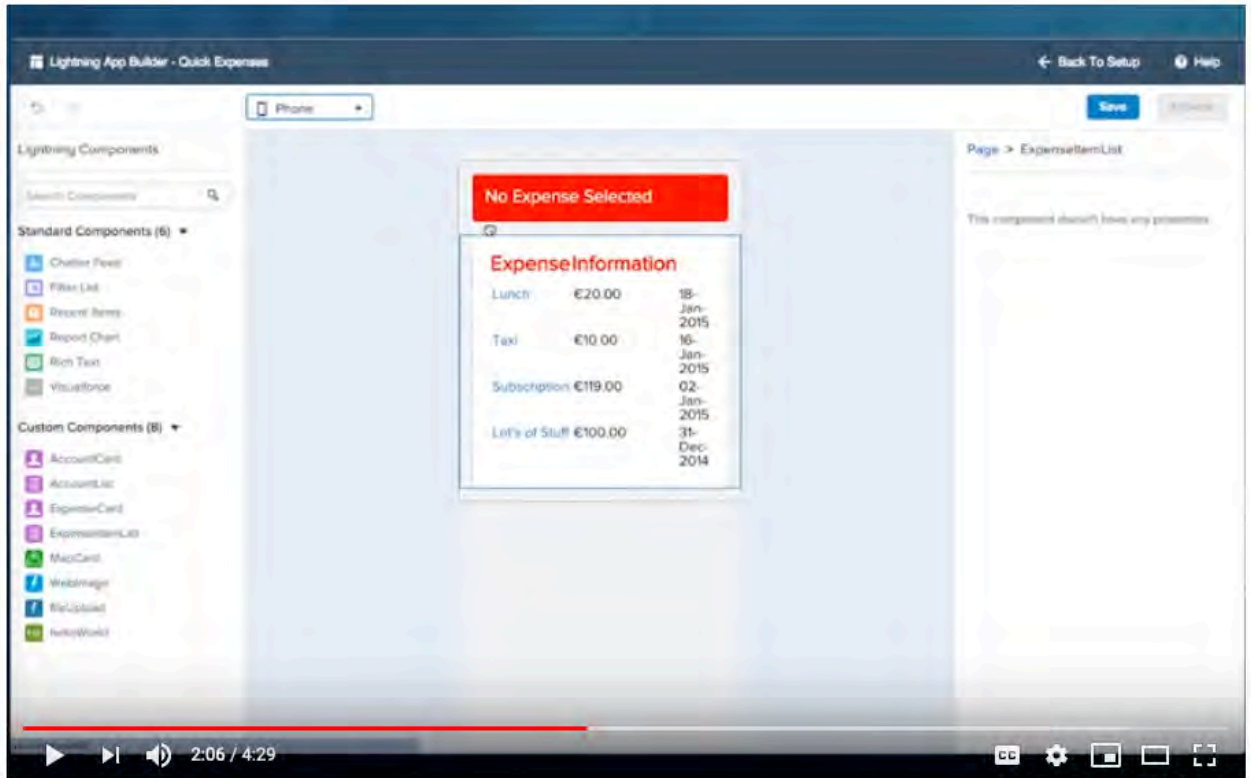

1 172. The Accused Instrumentality contains symbolic names required for evoking one or
2 more web components each related to a set of inputs and outputs of a web service obtainable over
3 a network, where the symbolic names are character strings that do not contain either a persistent
4 address or pointer to an output value accessible to the web service, where each symbolic name has
5 an associated data format class type corresponding to a subclass of User Interface (UI) objects that
6 support the data format type of the symbolic name, and where each symbolic name has a preferred
7 UI object. The Accused Instrumentality contains symbolic names as the names of its components.
8 For example, the symbolic name “ExpenseItemList” is seen below.

20
21 Lightning Intro Screencasts: Lightning App Builder

22 **Source:** <https://youtu.be/XMK5Huuviow> 2:04/4:29

23
24 173. The “ExpenseItemList” symbolic name corresponds to the ExpenseItemList web
25 component.

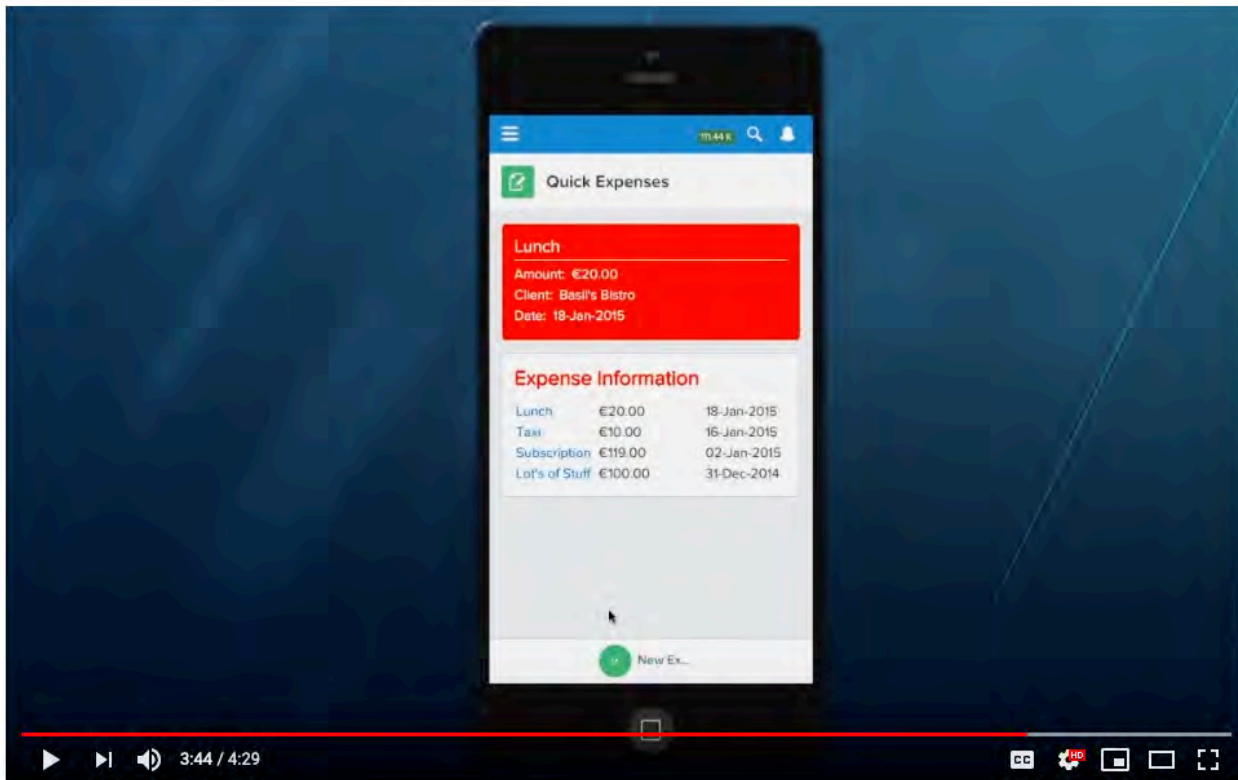

14 Lightning Intro Screencasts: Lightning App Builder

15 **Source:** <https://youtu.be/XMK5Huuviow> 2:06/4:29

16 174. The “ExpenseItem” web component widget is related to a set of inputs and
17 outputs of a web service obtainable over a network, as seen by the data populated in the widget,
18 such as the first line item, “Lunch, €20.00, 18-Jan-2015.” Users of the app can add additional
19 Expense Items as inputs, and they will be reflected in the Expense Item List as outputs.

Source: <https://youtu.be/XMK5Huuviow> 3:46/4:29

175. These web components require either a web browser or the Salesforce mobile app to run. Salesforce publishes a list of supported browsers for the Accused Instrumentality.

	MICROSOFT* INTERNET EXPLORER*	MICROSOFT* EDGE	GOOGLE CHROME™	MOZILLA* FIREFOX*	APPLE* SAFARI*
Lightning Experience	IE 11 (EOL December 31, 2020)	Latest	Latest	Latest	12.X+
Lightning Communities	IE 11	Latest	Latest	Latest	12.X+
Special setup considerations?	No	No	No	No	No
Limitations?	Yes	Yes	No	Yes	Yes

Source: https://help.salesforce.com/articleView?id=getstart_browsers_sfx.htm

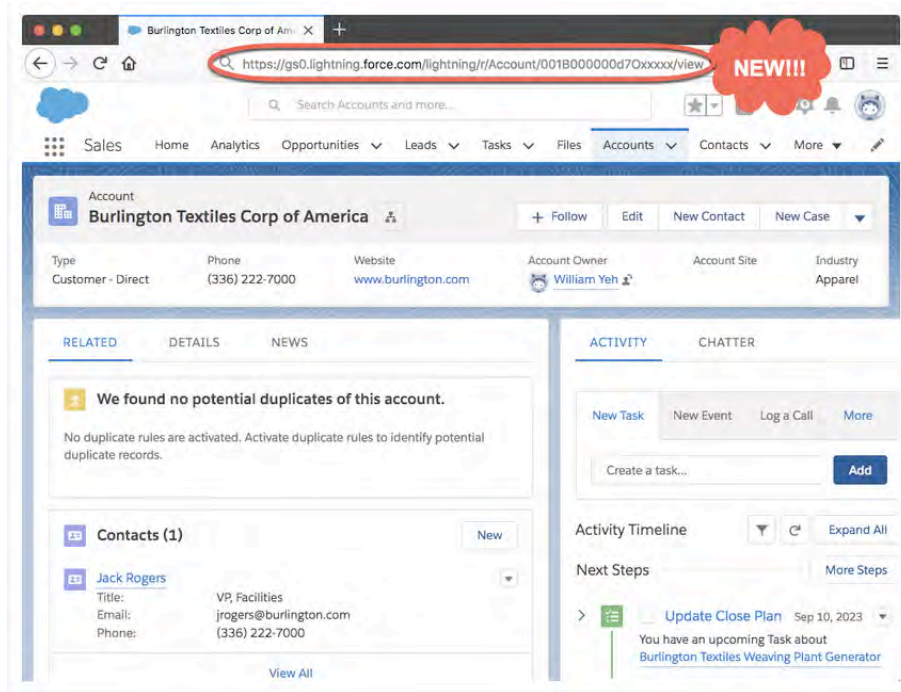

176. The address of the web service in the Accused Instrumentality is embedded in the Component that is dragged from the AppStore and seamlessly placed in the Accused Instrumentality’s page in the app builder.

1 Your custom Lightning components don't automatically work on Lightning pages or in the Lightning App Builder. To
2 make a custom component usable in both, you need to:

- 3 1. Configure the component and its component bundle so that they're compatible with the Lightning App Builder and
4 Lightning pages.
- 5 2. Deploy My Domain in your org. When you deploy My Domain, references and links to Lightning resources are in the
6 format `https://<myDomain>.lightning.force.com`.

7 https://help.salesforce.com/articleView?id=lightning_page_components_custom.htm&type=5

8 177. The Accused Instrumentality stores an address of the web service and stores it in
9 computer memory. For example, Lightning web pages such as the "Burlington Textiles Corp of
10 America" served to users contain addresses. These addresses are stored in computer memory on
11 at least Salesforce's servers. On information and belief, the mobile app also contains the address
12 of the web service.

Introducing Lightning Web Components

Now you can build Lightning components using two programming models: Lightning Web Components, and the original model, Aura Components. Lightning web components are custom HTML elements built using HTML and modern JavaScript. Lightning web components and Aura components can coexist and interoperate on a page. To admins and end users, they both appear as Lightning components.

Lightning Web Components uses core [Web Components](#) standards and provides only what's necessary to perform well in browsers supported by Salesforce. Because it's built on code that runs natively in browsers, Lightning Web Components is lightweight and delivers exceptional performance. Most of the code you write is standard JavaScript and HTML.

Salesforce is committed to developing open web standards and is a member of the [World Wide Web Consortium \(W3C\)](#).

Base Lightning components are available as Aura components and as Lightning web components. The [Component Reference](#) includes documentation, specifications, and examples for both. See [Base Components: Aura Vs Lightning Web Components](#) for differences between them.

1 182. The application and player are provided to the device and executed on the device.
 2 Apps created with the Accused Instrumentality are available on both desktop and mobile devices.
 3 In both the mobile app and desktop experience, both the application and player are provided to a
 4 user's device and executed on the device.

19 183. The application and player are provided to and executed on the device and the user
 20 provides one or more input values associated with an input symbolic name to an input of a defined
 21 UI object. The device provides the user provided one or more input values and corresponding
 22 input symbolic name to the web service. The web service utilizes the input symbolic name and
 23 user provided one or more input values for generating one or more output values having an
 24 associated symbolic name. The player receives the output symbolic name and corresponding one
 25 or more output values and provides instructions for a display of the device to present an output
 26 value in the defined UI object. For example, users of the app can add additional Expense Items.
 27 The web service will use the user's input values for generating output values and return data to the
 28 player for generating a confirmation "SUCCESS" message after the user has uploaded a receipt.

1 The device provides the input new expenses to the Salesforce web service for generating one or
2 more output values having an associated symbolic name. The player receives the output symbolic
3 name and corresponding output value(s) and provides instructions for a display of the device to
4 present an output value in the defined UI object.

1 184. The defined Expense Information UI object is selected by the user. Since the UI
2 object is a Custom Component, it contains information selected by the user.

18 185. The authoring tool in the Accused Instrumentality is configured to associate the
19 selected symbolic name with the defined UI object, where the selected symbolic name is only
20 available to UI objects that support the defined data format associated with that symbolic name.
21 For example, the authoring tool associates the “ExpenseItemList” symbolic name with the defined
22 UI object, where the symbolic name is only available to UI objects that support the data of the
23 ExpenseItemList.

2 188. Salesforce was made aware of the '755 patent and its infringement thereof at least
3 as early as November 30, 2020 when Express Mobile provided notice of Salesforce's infringement
4 of the '755 patent to Marc Benioff, Chair and Chief Executive Officer and Amy Weaver, President
5 and Chief Legal Officer of Salesforce. Since at least the time Salesforce received notice,
6 Salesforce has induced others to infringe at least one claim of the '755 patent under 35 U.S.C. §
7 271(b) by, among other things, and with specific intent or willful blindness, actively aiding and
8 abetting others to infringe, including but not limited to Salesforce's clients, customers, and end
9 users, whose use of the Accused Instrumentality constitutes direct infringement of at least one
10 claim of the '755 patent. In particular, Salesforce's actions that aid and abet others such as
11 customers and end users to infringe include advertising and distributing the Accused
12 Instrumentality and providing instruction materials, training, and services regarding the Accused
13 Instrumentality. *See e.g.,* www.salesforce.com, help.salesforce.com,
14 <https://trailhead.salesforce.com>, including all related domains and subdomains. Salesforce has
15 engaged in such actions with specific intent to cause infringement or with willful blindness to the
16 resulting infringement because Salesforce has had actual knowledge of the '755 patent and
17 knowledge that its acts were inducing infringement of the '755 patent since at least the date
18 Salesforce received notice that such activities infringed the '755 patent.

19 189. Salesforce is liable as a contributory infringer of the '755 patent under 35 U.S.C. §
20 271(c) by offering to sell, selling and importing into the United States website or web page
21 authoring tools to be especially made or adapted for use in an infringement of the '755 patent. The
22 Accused Instrumentality is a material component for use in practicing the '755 patent, is
23 specifically made and is not a staple article of commerce suitable for substantial non-infringing
24 use.

25 190. Salesforce's infringement has damaged and continues to damage and injure
26 Express Mobile.

PRAYER FOR RELIEF

WHEREFORE, Plaintiff requests that the Court enter judgment for Plaintiff and against Defendant as follows:

191. That U.S. Patent No. 6,546,397 be judged valid, enforceable, and infringed by Defendant;

192. That U.S. Patent No. 7,594,168 be judged valid, enforceable, and infringed by Defendant

193. That U.S. Patent No. 9,928,044 be judged valid, enforceable, and infringed by Defendant;

194. That U.S. Patent No. 9,471,287 be judged valid, enforceable, and infringed by Defendant;

195. That U.S. Patent No. 9,063,755 be judged valid, enforceable, and infringed by Defendant;

196. That Plaintiff be awarded judgment against Defendant for damages together with interests and costs fixed by the Court including an accounting of all infringements and/or damages not presented at trial;

197. That the Court declare this an exceptional case and award Plaintiff its attorneys' fees, as provided by 35 U.S.C. § 285; and

198. That Plaintiff be awarded such other and further relief as this Court may deem just and proper.

JURY DEMAND

Plaintiff respectfully requests a jury trial on all issues so triable.

Dated: December 1, 2020

Respectfully submitted,

By: /s/ Robert Kramer
