

**IN THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF DELAWARE**

DIGI PORTAL LLC,

Plaintiff,

v.

UBER TECHNOLOGIES, INC.,

Defendant.

C.A. NO. _____

JURY TRIAL DEMANDED

PATENT CASE

ORIGINAL COMPLAINT FOR PATENT INFRINGEMENT

Plaintiff Digi Portal LLC files this Original Complaint for Patent Infringement against Uber Technologies, Inc. and would respectfully show the Court as follows:

I. THE PARTIES

1. Plaintiff Digi Portal LLC (“Digi Portal” or “Plaintiff”) is a Texas limited liability company with a place of business at 4757 W. Park Blvd, Ste 113-1003, Plano, TX 75093.

2. On information and belief, Defendant Uber Technologies, Inc. (“Defendant”) is a corporation organized and existing under the laws of Delaware. Defendant has a registered agent at National Registered Agents, Inc., 1209 Orange St., Wilmington, DE 19801.

II. JURISDICTION AND VENUE

3. This action arises under the patent laws of the United States, Title 35 of the United States Code. This Court has subject matter jurisdiction of such action under 28 U.S.C. §§ 1331 and 1338(a).

4. On information and belief, Defendant is subject to this Court’s specific and general personal jurisdiction, pursuant to due process and the Delaware Long-Arm Statute, due at least to its business in this forum, including at least a portion of the infringements alleged

herein. Furthermore, Defendant is subject to this Court's specific and general personal jurisdiction because Defendant is a Delaware limited liability company.

5. Without limitation, on information and belief, Defendant has derived revenues from its infringing acts occurring within Delaware. Further, on information and belief, Defendant is subject to the Court's general jurisdiction, including from regularly doing or soliciting business, engaging in other persistent courses of conduct, and deriving substantial revenue from goods and services provided to persons or entities in Delaware. Further, on information and belief, Defendant is subject to the Court's personal jurisdiction at least due to its sale of products and/or services within Delaware. Defendant has committed such purposeful acts and/or transactions in Delaware such that it reasonably should know and expect that it could be haled into this Court as a consequence of such activity.

6. Venue is proper in this district under 28 U.S.C. § 1400(b). On information and belief, Defendant is a corporation organized in Delaware. On information and belief, from and within this District Defendant has committed at least a portion of the infringements at issue in this case.

7. For these reasons, personal jurisdiction exists and venue is proper in this Court under 28 U.S.C. § 1400(b).

III. COUNT I
(PATENT INFRINGEMENT OF UNITED STATES PATENT NO. 8,352,854)

8. Plaintiff incorporates the above paragraphs herein by reference.

9. On January 8, 2013, United States Patent No. 8,352,854 ("the '854 Patent") was duly and legally issued by the United States Patent and Trademark Office. The '854 Patent is titled "Dynamic Page Generator." The '854 patent is not subject to a terminal disclaimer and its

term is extended under 35 U.S.C. 154(b) by 1270 days. (Ex. A). A true and correct copy of the ‘854 Patent is attached hereto as Exhibit A and incorporated herein by reference.

10. Digi Portal is the assignee of all right, title, and interest in the ‘854 patent, including all rights to enforce and prosecute actions for infringement and to collect damages for all relevant times against infringers of the ‘854 Patent. Accordingly, Digi Portal possesses the exclusive right and standing to prosecute the present action for infringement of the ‘854 Patent by Defendant.

11. The application leading to the ‘854 patent is a continuation of U.S. application Ser. No. 11/656,636, filed Jan. 22, 2007, which is a continuation of U.S. application Ser. No. 09/393,718, filed Sep. 10, 1999, which is a continuation of U.S. application Ser. No. 08/873,975, filed Jun. 12, 1997. (Ex. A at cover). The ‘854 patent was first assigned to Yahoo! Inc. (*Id.*).

12. The invention in the ‘854 Patent relates to the field of customized information presentation on the web; more specifically, providing customized pages that are quickly served and scalable to handle many users simultaneously. (*Id.* at col. 1:26-30).

13. Web servers for serving static web pages were well known in the global Internet. (*Id.* at col. 1:31-32). Such static web pages are useful in many applications whether the information presented to each requesting user is the same. (*Id.* at col. 1:32-34). However, some applications require customization to appeal to users. (*Id.* at col. 1:34-35). One example is presenting news to users. (*Id.* at col. 1:35-37). When static pages are used, a user will often have to scroll through many topics not of interest to that user to get to the information of interest. (*Id.* at col. 1:37-40). However, when presenting news to users, customized web pages present news that is more relevant to the requesting user than static pages because the information is filtered according to each user’s interest. (*Id.* at col. 1:35-37, 40-41).

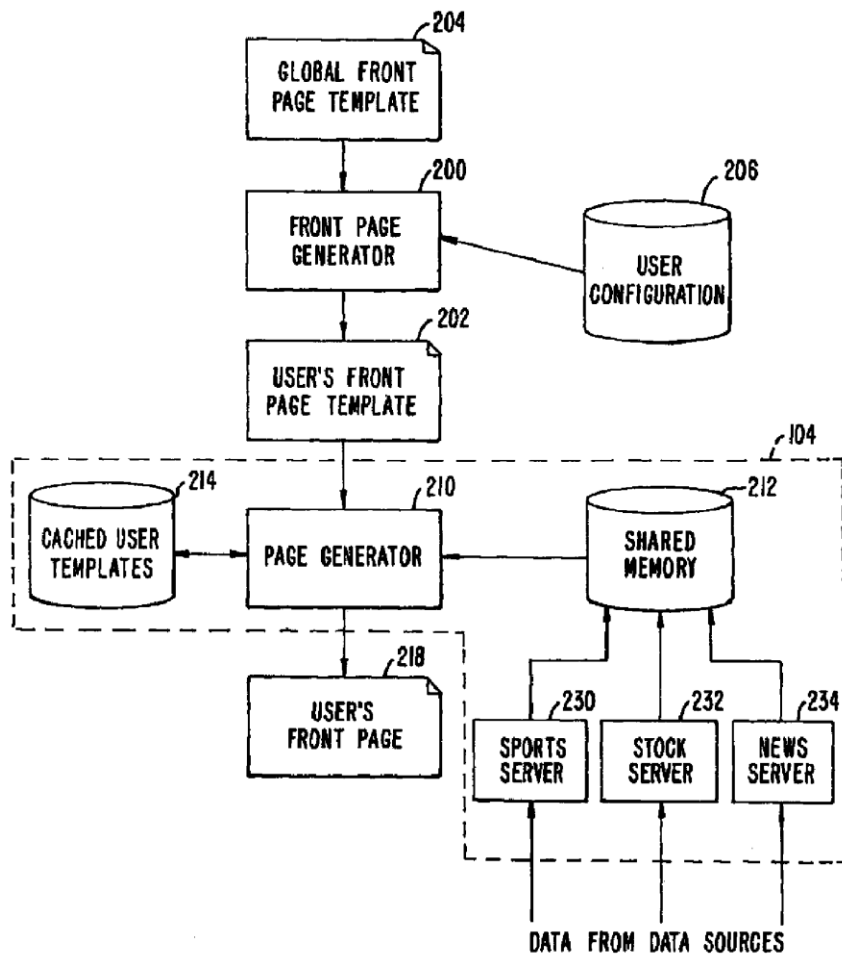

14. Customizing a server response based on the requester is known; however, known systems do not scale well. (*Id.* at col. 1:42-43). One method of serving custom pages is to execute a script, such as a Common Gateway Interface (CGI) script or other program to collect the information necessary to generate the custom page. (*Id.* at col. 1:43-47). For example, if the custom page is a news page containing stock quotes, sports scores and weather, the script might poll a quote server to obtain the quotes of interest, poll a sports score server to obtain the scores of interest and poll a weather server to obtain the weather. (*Id.* at col. 1:47-51). With this information, the server generates the custom page and returns it to the user. (*Id.* at col. 1:51-52). This approach is only useful where there are not many requesters and where the attendant delay associated with polling various servers to obtain the requested information is acceptable to users. (*Id.* at col. 1:53-54). Growing impatience with waiting will turn users away from such servers, especially as use increases. (*Id.* at col. 1:54-58).

15. One approach that was used in the prior art to avoid long waits is to transfer the custom information in non-real-time, so that the information is stored local to the user as it arrives and is presented to the user on request. (*Id.* at col. 1:59-62). A disadvantage of such a system is that the networks used by the user become clogged with data continually streaming to the user and require large amounts of local storage. (*Id.* at col. 1:62-65). Another disadvantage is that the locally stored information will become out of date as the server receives new data. (*Id.* at col. 1:65-67).

16. The inventors therefore recognized that there was a need to dynamically generate customized pages in an unconventional manner that solved the technical problems in the prior art of long transfer times to obtain the requested information or having to rely on continually

transferring custom information in non-real time which can clog the data network in addition to providing outdated information. (*Id.* at col. 1:42 to col. 2:2).

17. The following is a discussion of non-limiting examples of the claimed invention discussed in the specification of the '854 patent. The '854 patent provides a non-limiting exemplary diagram of the generation of a custom page for a user, using a front-page generator (200) and page server (104) (*Id.* at col. 3:58-60):

(Ex. A at Fig. 2). Front page generator (200) generates a user template (202) from a global front page template (204) and a user configuration record (206). (*Id.* at col. 3:58-62). A non-limiting example of a global front page template is provided in the '854 patent:

```

<html>
<head>
<title>My Yahoo! news summary for <!-- login --></title>
</head>
<body>

<center>
<!--banner:sum -->

<!-- ad -->
<!-- nav bar --> 302
</center>

<table border=1 cellpadding=4 cellspacing=0 width=100%>
<tr><td align=center valign=top width="1%">
<!-- leftside:nsum --> 302
<p></td>
<td align=center valign=top width="100%">
<!-- mode bar:"FRONT PAGE" -->
<!-- channel:nsum --> 302

</td></tr>
</table>

<center>
<table border=1 cellpadding=2 cellspacing=0 width=100%>
<!-- motd:motn.html -->
</table>
</center>
<!-- search -->

<!-- copyright:sum -->

</body>
</html>

```

204

(Ex. A at Fig. 3). The global user template (204) is an HTML (HyperText Markup Language) document with additional tags as placeholders for live data. (*Id.* at col. 5:16-19). Several placeholders (302) are shown in the code. (*Id.* at col. 5:19).

18. A user configuration record (206) is a record selected from user configuration database (116). (*Id.* at col. 3:63-64). User configuration information includes user demographic information, such as sex, age, location, stock quotes, favorite sports teams, news topics, etc. (*Id.* at col. 2:13-14, col. 5:45-50, col. 6:37-39, 46-48, 52-56). The user configuration information in the example may not change until the user changes his or her preferences. (*Id.* at col. 5:33-35).

19. The '854 patent provides an illustration of a user template (202) as might be generated from global user template (204) and a user configuration record (206):

202

```

<!-- timezone:-8,PT 0 -->
<!-- ad:M,85,95035,T,* 792 -->
<!-- portfolio:Quotes,pf_1,1,^DJI,^NYA,^IXIC,^SPX,^XAX,YHOO,NSCP,IOM,NSCP,YHOO
2836 -->
<!--

,NLSFO 3803 -->
<!-- weather:f,30901,uk_londo,94601,95101 4368 -->
<!--
mode_bar:"FRONT_PAGE",.hier=News+Summary%3aEdit&.done=http://my.yahoo.com/news
/summary2:3,rt,rw,z0000,mlb,re,vf 4597 -->
<!-- motd:us_motn.html 4696 -->
<html>
<head>
<title>My Yahoo! news summary for ash802</title>
</head>
<body>

...

</body>
</html>

```

(Ex. A at Fig. 4). The user template is unique because it is built based on user demographic information provided by the user, as opposed to generically chosen dynamic information or based on information provided by the server. Exemplary demographic information is shown in line 2 of Fig. 4 (“:M,85,95035,T,*”) indicating that the user is a male, age 85, located in zip code 95035, etc. (*Id.* at col. 5:42-45). The ‘854 patent includes a full listing of the non-limiting exemplary user template of Fig. 4 in Appendix A. (Ex. A at col. 2:57-58; col. 5:22-23).

```

src="http://www.yahoo.com/images/my/logout.gif" alt="Change
User"></a></td>
</tr>
</table>
</center>

<area coords="51,0,100,68"
href="http://edit.my.yahoo.com/config/login?logout=1">
</map>

</body>
</html>

```

(Ex. B at Col. 7-11).

20. As shown in Fig. 2 of the '854 patent, the user template does not need to be generated each time and instead can be generated and stored. (Ex. A at col. 4:49-51, col. 5:23-32). One benefit of the claimed invention that speeds up the operation of the dynamic page generation is that the page can be stored in multiple locations that are based on the frequency by which the user requests the customized page based on the user template. (*Id.* at col. 5:37-38, col. 6:49-59). Some users might choose to access their user page infrequently, while others might choose to access their front page hourly. (*Id.* at col. 6: 52-54). For infrequent users, the user template is stored in a user configuration database, whereas for frequent users the user template may also be stored in cache. (*Id.* at col. 5:37-38, col. 6:51-59). Caching reduces the time to respond to a request for a page and is more effective where the typical user makes several requests in a short time span and then doesn't make any requests for a long period of time. (*Id.* at col. 5:29-32).

21. When the user template stored in cache, it may be stored long enough to be reused and may also be flushed from cache if the user page has been inactive for several days. (*Id.* at col. 6:49-52, 59-60). Even if it is flushed from cache, the user template can be maintained in the user configuration database, which can then be quickly accessed and stored in cache in the event a user may start to access the user page quickly. (*Id.*).

22. The custom user page can also include an advertisement that is selected based on the user demographic information. (*Id.* at col. 5:39-42). For example, using the demographic information “:M,85,95035,T,*”, an advertisement can be selected that is targeted for a male user, age 85, located in zip code 95035, etc. (*Id.* at col. 5:39-45).

23. Appendix B of the ‘854 patent is an HTML source code listing of an HTML page created from an executed user template that is used to generate a user customized browser web page. (Ex. B at col. 11 – col. 19).

24. As explained the ‘854 patent and prosecution history, there are unconventional and non-generic features of the claimed invention which are technical improvements that make the generation of dynamic web pages quicker, more efficient, and use less resources. By storing the user customized template program in two locations in which the location is determined by frequency, the system is more efficient and allows for a quicker response than the prior art. For example, by storing the user customized template in user configuration database and in cache, the dynamic generation of a user customized web page is more efficient and uses less resources of the server, database, and network, and allows for a quicker generation of the dynamic web page thereby allowing the server to scale in order to handle substantially more requests for user customized dynamic web pages. (*See* Ex. A at col. 1:42-67, col. 4:49-col. 5:15, col. 5:23-32). Furthermore, by caching the user template, the page can be generated entirely within a page server, thus conserving network and database resources. (*See id.* at col. 4:10-11, col. 5:23-32). By also storing the user customized template in a user configuration database, even if the cache is cleared, the template already exists in the database which then prevents having to regenerate a new user customized page from a global page template using a user configuration record thus saving database and server resources and more quickly generating the requested web page from

27. **Direct Infringement.** Upon information and belief, Defendant has been directly infringing at least claims 1-2, 8-9, and 15 of the '854 patent in Delaware, and elsewhere in the United States, by performing the claimed method, using the claimed computer-readable non-transitory medium storing computer instructions, and/or making and/or using the claimed system at uber.com/ (“Accused Instrumentality”).

28. In at least testing and usage, the Accused Instrumentality practices a method for receiving a user request (*e.g.*, a user login request) for a customized page (*e.g.*, a user’s customized home and search pages on the website). As shown below, the uber.com website will utilize user demographic information to serve content. Targeted advertisement is implemented using location and demographic information provided by the user. The JavaScript code shown below from the front-facing publicly available code, demonstrates that the sign-in is handled via JavaScript. The actual JS file is served from a CDN. The JavaScript code below was retrieved from browser developer tools. Based on user data, the code is utilizing user demographics such as location.

Or connect using a social account

(E.g., <https://auth.uber.com/login/#> (for a particular user)).

A. The data we collect

Uber collects:

- Data provided by users to Uber, such as during account creation
- Data created during use of our services, such as location, app usage, and device data
- Data from other sources, such as Uber partners and third parties that use Uber APIs

The following data is collected by or on behalf of Uber:

Various demographic and location information obtained by uber

1. Data provided by users. This includes:

- User profile: We collect data when users create or update their Uber accounts. This may include their name, email, phone number, login name and password, address, profile picture, payment or banking information (including related payment verification information), government identification documents, including driver's license numbers and images, birthdate, signature, and photo. This also includes vehicle or insurance information of drivers and delivery partners, and user settings. We may use the photos submitted by drivers and/or delivery partners to verify their identities, such as through facial recognition technologies. For more information, please see the section titled "How we use personal data."
- Background check and identity verification: We collect background check and identity verification information for drivers and delivery partners. This may include information such as driver history or criminal record (where permitted by law), and right to work. This information may be collected by an authorized vendor on Uber's behalf. We also collect identity verification from Uber Eats users who request alcohol delivery.
- Demographic data: We may collect demographic data about users, including through user surveys. In some countries, we may also receive demographic data about users from third parties.
- User content: We collect the information users submit when they contact Uber customer support, provide ratings or compliments for other users or restaurant partners, or otherwise contact Uber. This may include feedback, photographs or other recordings collected by users.

2. Data created during use of our services. This includes:

- Location data: We collect precise or approximate location data from a user's mobile device if enabled by the user to do so. For drivers and delivery partners, Uber collects this data when the Uber app is running in the foreground (app open and on-screen) or background (app open but not on-screen) of their mobile device. For riders, delivery recipients, and renters, Uber collects this data when the Uber app is running in the foreground. In certain regions (which do not include the European Union), Uber may also collect this data when the Uber app is running in the background of the user's mobile device. Riders, delivery recipients, and renters may use the Uber apps without enabling Uber to collect location data from their mobile devices. However, this may affect some functionality available in the Uber apps. For example, a user who has not enabled location data collection

D. Marketing opt-outs

Users may opt out of receiving promotional emails from Uber [here](#). Users may also opt out of receiving emails and other messages from Uber by following the unsubscribe instructions in those messages. We may still send users who have opted out non-promotional communications, such as receipts for rides or information about their account.

E. User data requests

Uber provides users with a variety of ways to learn about, control, and submit questions and comments about Uber's handling of their data. To make a request, please go [here](#).

- Accessing data: Users can ask for an explanation of the data we collect from them and how we use it.
- Receiving data: Users can ask for a copy of data that Uber collects from them with their consent or as necessary to provide our services.
- Changing or updating data: Users can edit the name, phone number, email address, payment method, and photo associated with their account through the Settings menu in Uber's apps or driver portal. They may also ask that Uber change or update their data, including if they believe such data is inaccurate or incomplete.
- Deleting data: Users may request deletion of their account at any time through the Settings > Privacy menus in the Uber app, or through Uber's website (riders and delivery recipients [here](#); drivers and delivery partners [here](#)).
- Objections, restrictions, and complaints: Users may request that we stop using all or some of their personal data, or that we limit our use of their data. Uber may continue to process data after such objection or request to the extent required or permitted by law.

In addition, depending on their location, users may have the right to file a complaint relating to Uber's handling of their personal data with the data protection authority in their country. For example, users in the European Union and South America may submit such requests to the data protection authorities in the country in which they live.

6. Marketing. Uber may use the data we collect to market our services to our users. This includes sending users communications about Uber services, features, promotions, sweepstakes, studies, surveys, news, updates, and events.

We may also send communications to our users about products and services offered by Uber partners. For example, if a user has placed an Uber Eats order, we may provide recommendations, promotions, or ads about similar food offered by other Uber partners. Although we may send users communications about Uber partners' products and services, we do not sell users' personal data to, or share it with, such partners or others for purposes of their own direct marketing or advertising, except with users' consent.

We may use the data we collect to personalize the marketing communications (including advertisements) that we send, including based on user location, past use of Uber's services, and user preferences and settings.

We may also send users communications regarding elections, ballots, referenda, and other political and notice processes that relate to our services. For example, Uber has notified some users by email of ballot measures or pending legislation relating to the availability of Uber's services in those users' areas.

7. Non-marketing communications. Uber may use the data we collect to generate and provide users with receipts; inform them of changes to our terms, services, or policies; or send other communications that aren't for the purpose of marketing the services or products of Uber or its partners.

29. In at least testing and usage, the Accused Instrumentality practices receiving a template program (e.g., software instructions and data used for rendering a particular user's page such as a JavaScript page) that is unique to the user (e.g., after a user logs in, pages shown to the user will be based upon a user specific template which dictates that customized information is displayed, such as the display of the user's name on the page,) and based on user configuration information (e.g., a user can customize the content of their templates and what will be rendered and displayed using said templates by using preferences tied to their account by logging in and by entering information such as search preferences) the user configuration information being supplied by the user (e.g., a user will have inputted account preferences, such as their name, and will input search preferences) and used to build the template program that is unique to the user (e.g. a template program will be unique to a user because it is composed of instruction, code, and

data that is processed/executed to create a webpage customized to a user (*e.g.* after a user logs in, the pages displayed to the user will show the user's name; Uber's server provides at least a portion of the unique template program, such as a generic template containing JavaScript and other code that executes at a user's computer to create a customized webpage), the user configuration information including user demographic information (*e.g.*, a user's account profile information and/or configuration information may contain their location and age, amongst other information), and wherein the template program is received from one of at least two locations (*e.g.*, the data and templates comprising a user's page may be retrieved from a main server/disk storage, or from other sources such as a CDN server, cookies, or local cache), the location determined from the frequency of the user request for the customized page (*e.g.*, based on the frequency at which a user logs in or accesses their page, the data comprising the users page may be stored at a main server or at a CDN server, cookies, or local cache). On information and belief, template information, that is part of a template program which corresponds to less frequently accessed webpages, will need to be pulled from a main server, wherein for more frequently accessed pages, template information will be stored in local storage on the user's computer. Running the template program (page generation code, tiles, containers, and user data) creates the customized webpage. When a user signs-up or performs a login, the code takes the user template information and stores it in a site JavaScript object that is used in logic to display site logic-based conditions. The user information is stored in multiple locations: (1) At runtime, in a JavaScript object with the data structure called Context Data; (2) Within Browser local storage; and (3) Browser Cookies. As shown below, after a user logs in to their account, a user specific template program will be used to display pages to a user. The user specific template dictates that certain customized content, such as the user's name, will be displayed. Targeted

advertisement is implemented using location and demographic information provided by the user. The JavaScript code shown below from the front-facing publicly available code, demonstrates that the sign-in is handled via JavaScript. The actual JS file is served from a CDN. The JavaScript code below was retrieved from browser developer tools. Based on user data, the code is utilizing user demographics such as location. The code shows, that some portions of the template program may be pulled from local browser cache as opposed to the main server.

A. The data we collect

Uber collects:

- Data provided by users to Uber, such as during account creation
- Data created during use of our services, such as location, app usage, and device data
- Data from other sources, such as Uber partners and third parties that use Uber APIs

The following data is collected by or on behalf of Uber:

Various demographic and location information obtained by uber

1. Data provided by users. This includes:

- User profile: We collect data when users create or update their Uber accounts. This may include their name, email, phone number, login name and password, address, profile picture, payment or banking information (including related payment verification information), government identification documents, including driver's license numbers and images, birthdate, signature, and photo. This also includes vehicle or insurance information of drivers and delivery partners, and user settings. We may use the photos submitted by drivers and/or delivery partners to verify their identities, such as through facial recognition technologies. For more information, please see the section titled "How we use personal data."
- Background check and identity verification: We collect background check and identity verification information for drivers and delivery partners. This may include information such as driver history or criminal record (where permitted by law), and right to work. This information may be collected by an authorized vendor on Uber's behalf. We also collect identity verification from Uber Eats users who request alcohol delivery.
- Demographic data: We may collect demographic data about users, including through user surveys. In some countries, we may also receive demographic data about users from third parties.
- User content: We collect the information users submit when they contact Uber customer support, provide ratings or compliments for other users or restaurant partners, or otherwise contact Uber. This may include feedback, photographs or other recordings collected by users.

2. Data created during use of our services. This includes:

- Location data: We collect precise or approximate location data from a user's mobile device if enabled by the user to do so. For drivers and delivery partners, Uber collects this data when the Uber app is running in the foreground (app open and on-screen) or background (app open but not on-screen) of their mobile device. For riders, delivery recipients, and renters, Uber collects this data when the Uber app is running in the foreground. In certain regions (which do not include the European Union), Uber may also collect this data when the Uber app is running in the background of the user's mobile device. Riders, delivery recipients, and renters may use the Uber apps without enabling Uber to collect location data from their mobile devices. However, this may affect some functionality available in the Uber apps. For example, a user who has not enabled location data collection

D. Marketing opt-outs

Users may opt out of receiving promotional emails from Uber here. Users may also opt out of receiving emails and other messages from Uber by following the unsubscribe instructions in those messages. We may still send users who have opted out non-promotional communications, such as receipts for rides or information about their account.

E. User data requests

Uber provides users with a variety of ways to learn about, control, and submit questions and comments about Uber's handling of their data. To make a request, please go [here](#).

- Accessing data: Users can ask for an explanation of the data we collect from them and how we use it.
- Receiving data: Users can ask for a copy of data that Uber collects from them with their consent or as necessary to provide our services.
- Changing or updating data: Users can edit the name, phone number, email address, payment method, and photo associated with their account through the Settings menu in Uber's apps or driver portal. They may also ask that Uber change or update their data, including if they believe such data is inaccurate or incomplete.
- Deleting data: Users may request deletion of their account at any time through the Settings > Privacy menus in the Uber app, or through Uber's website (riders and delivery recipients [here](#); drivers and delivery partners [here](#)).
- Objections, restrictions, and complaints: Users may request that we stop using all or some of their personal data, or that we limit our use of their data. Uber may continue to process data after such objection or request to the extent required or permitted by law.

In addition, depending on their location, users may have the right to file a complaint relating to Uber's handling of their personal data with the data protection authority in their country. For example, users in the European Union and South America may submit such requests to the data protection authorities in the country in which they live.

6. Marketing. Uber may use the data we collect to market our services to our users. This includes sending users communications about Uber services, features, promotions, sweepstakes, studies, surveys, news, updates, and events.

We may also send communications to our users about products and services offered by Uber partners. For example, if a user has placed an Uber Eats order, we may provide recommendations, promotions, or ads about similar food offered by other Uber partners. Although we may send users communications about Uber partners' products and services, we do not sell users' personal data to, or share it with, such partners or others for purposes of their own direct marketing or advertising, except with users' consent.

We may use the data we collect to personalize the marketing communications (including advertisements) that we send, including based on user location, past use of Uber's services, and user preferences and settings.

We may also send users communications regarding elections, ballots, referenda, and other political and notice processes that relate to our services. For example, Uber has notified some users by email of ballot measures or pending legislation relating to the availability of Uber's services in those users' areas.

7. Non-marketing communications. Uber may use the data we collect to generate and provide users with receipts; inform them of changes to our terms, services, or policies; or send other communications that aren't for the purpose of marketing the services or products of Uber or its partners.

```

(E.g., <https://tags.tiqcdn.com/utag/uber/main/prod/utag.js> (for a particular user)).

30. On information and belief, the Accused Instrumentality practices receiving an advertisement selected in accordance with the user demographic information (e.g., uber.com provides advertisements to a user based on demographic information such as location, past use, activity, etc.). As shown below, targeted advertisement is implemented using location and demographic information provided by the user. Geo-targeting is used to serve ads to your pages - ads are specific to a user's region and language, based on their IP address. This means that the ads that are served to a user from Florida may be different than those that appear for a user from California. Geo-targeting makes the ads even more relevant for visitors to your site and means that you may not see all the ads that can be served to your pages. The ad targeting uses physical locations such as IP address and device location.

D. Marketing opt-outs

Users may opt out of receiving promotional emails from Uber [here](#). Users may also opt out of receiving emails and other messages from Uber by following the unsubscribe instructions in those messages. We may still send users who have opted out non-promotional communications, such as receipts for rides or information about their account.

E. User data requests

Uber provides users with a variety of ways to learn about, control, and submit questions and comments about Uber's handling of their data. To make a request, please go [here](#).

- Accessing data: Users can ask for an explanation of the data we collect from them and how we use it.
- Receiving data: Users can ask for a copy of data that Uber collects from them with their consent or as necessary to provide our services.
- Changing or updating data: Users can edit the name, phone number, email address, payment method, and photo associated with their account through the Settings menu in Uber's apps or driver portal. They may also ask that Uber change or update their data, including if they believe such data is inaccurate or incomplete.
- Deleting data: Users may request deletion of their account at any time through the Settings > Privacy menus in the Uber app, or through Uber's website (riders and delivery recipients [here](#); drivers and delivery partners [here](#)).
- Objections, restrictions, and complaints: Users may request that we stop using all or some of their personal data, or that we limit our use of their data. Uber may continue to process data after such objection or request to the extent required or permitted by law.

In addition, depending on their location, users may have the right to file a complaint relating to Uber's handling of their personal data with the data protection authority in their country. For example, users in the European Union and South America may submit such requests to the data protection authorities in the country in which they live.

6. Marketing. Uber may use the data we collect to market our services to our users. This includes sending users communications about Uber services, features, promotions, sweepstakes, studies, surveys, news, updates, and events.

We may also send communications to our users about products and services offered by Uber partners. For example, if a user has placed an Uber Eats order, we may provide recommendations, promotions, or ads about similar food offered by other Uber partners. Although we may send users communications about Uber partners' products and services, we do not sell users' personal data to, or share it with, such partners or others for purposes of their own direct marketing or advertising, except with users' consent.

We may use the data we collect to personalize the marketing communications (including advertisements) that we send, including based on user location, past use of Uber's services, and user preferences and settings.

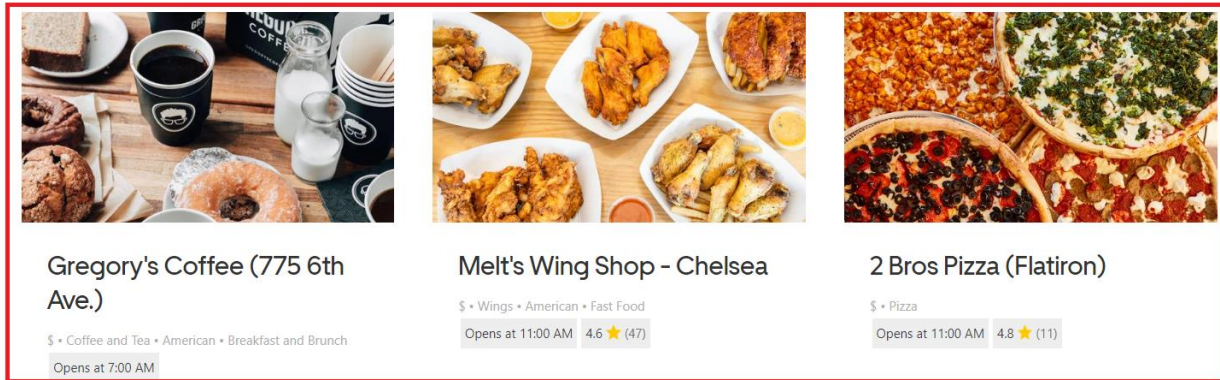

We may also send users communications regarding elections, ballots, referenda, and other political and notice processes that relate to our services. For example, Uber has notified some users by email of ballot measures or pending legislation relating to the availability of Uber's services in those users' areas.

7. Non-marketing communications. Uber may use the data we collect to generate and provide users with receipts; inform them of changes to our terms, services, or policies; or send other communications that aren't for the purpose of marketing the services or products of Uber or its partners.

(E.g., https://www.uber.com/legal/en/document/?country=united-states&lang=en&name=privacy-notice&_ga=2.42489574.2134784678.1594964810-2095567621.1594964810&uclid=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1).

31. On information and belief, the Accused Instrumentality practices executing the template program (e.g., JavaScript templates) using the selected advertisement (e.g., an advertisement selected based on a user's demographic information) to generate the customized page (e.g., a user's page, with the advertisement integrated). As shown below, targeted advertisement is implemented using location and demographic information provided by the user.

6. Marketing. Uber may use the data we collect to market our services to our users. This includes sending users communications about Uber services, features, promotions, sweepstakes, studies, surveys, news, updates, and events.

33. On information and belief, the Accused Instrumentality uses demographic information configured by a user and utilized for advertisement service includes at least location information, past usage, and activity (e.g., past usage and activity obtained by uber.com).

34. On information and belief, the Accused Instrumentality must include a computer readable non-transitory medium (e.g., servers) tangibly storing computer instructions (e.g., code including HTML, JS, CSS, etc.) for a processor (e.g., servers and/or user computers).

35. On information and belief, the Accused Instrumentality uses demographic information configured by a user and utilized for advertisement service includes at least location information, past usage, and activity (e.g., past usage and activity obtained by uber.com).

36. On information and belief, and as explained above, the accused product must include logic for completing all the steps cited in claim 15.

IV. COUNT II
(PATENT INFRINGEMENT OF UNITED STATES PATENT NO. 5,983,227)

37. Plaintiff incorporates the above paragraphs herein by reference.

38. On November 9, 1999, United States Patent No. 5,983,227 (“the ‘227 Patent”) was duly and legally issued by the United States Patent and Trademark Office. The ‘227 Patent is titled “Dynamic Page Generator.” A true and correct copy of the ‘227 Patent is attached hereto as Exhibit B and incorporated herein by reference.

39. Digi Portal is the assignee of all right, title and interest in the ‘227 patent, including all rights to enforce and prosecute actions for infringement and to collect damages for all relevant times against infringers of the ‘227 Patent. Accordingly, Digi Portal possesses the exclusive right and standing to prosecute the present action for infringement of the ‘227 Patent by Defendant.

40. The application leading to the ‘227 patent was filed June 12, 1997. (Ex. B at cover). The ‘227 patent was first assigned to Yahoo! Inc. (*Id.*).

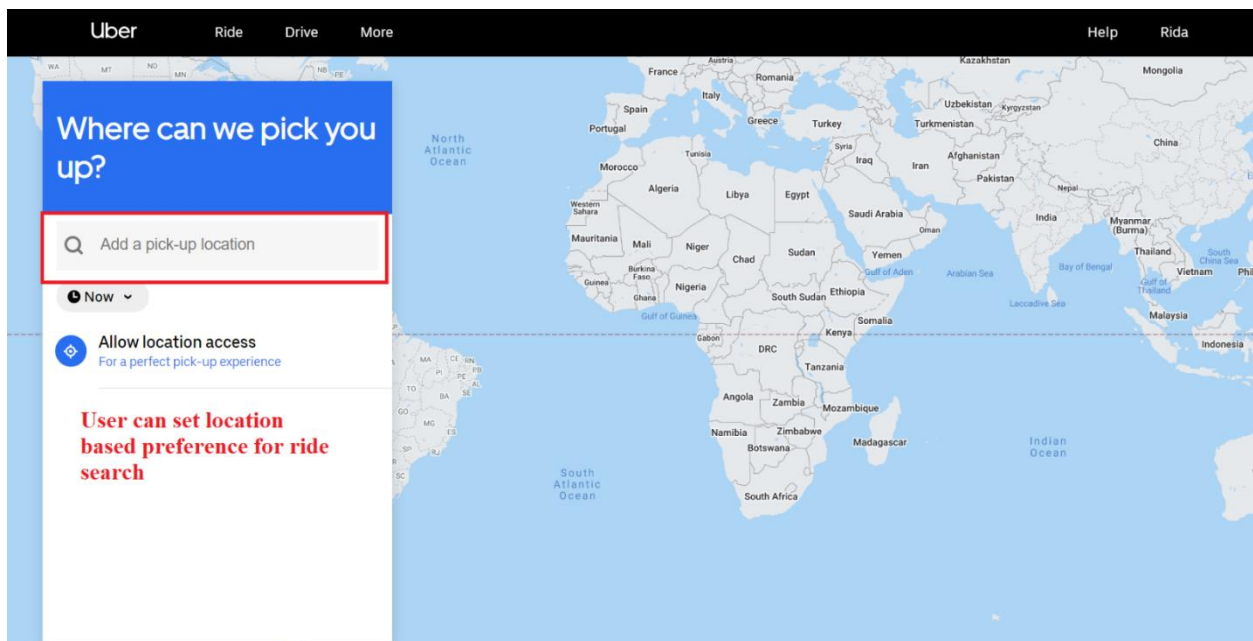

41. The invention in the ‘227 Patent relates to the field of customized information presentation on the web; more specifically, providing customized pages that are quickly served and scalable to handle many users simultaneously. (*Id.* at col. 1:14-18).

42. The ‘227 Patent shares the identical specification as the ‘342 patent and therefore Digi Portal incorporates the background and discussion of the invention in Paragraphs 13-25. Furthermore, as show in the prosecution history of the ‘227 Patent, it was unconventional to download real-time information into a server and use a template for the static data as opposed to linking directly to real-time information. (Ex. E at 5, Ex. F at 2).

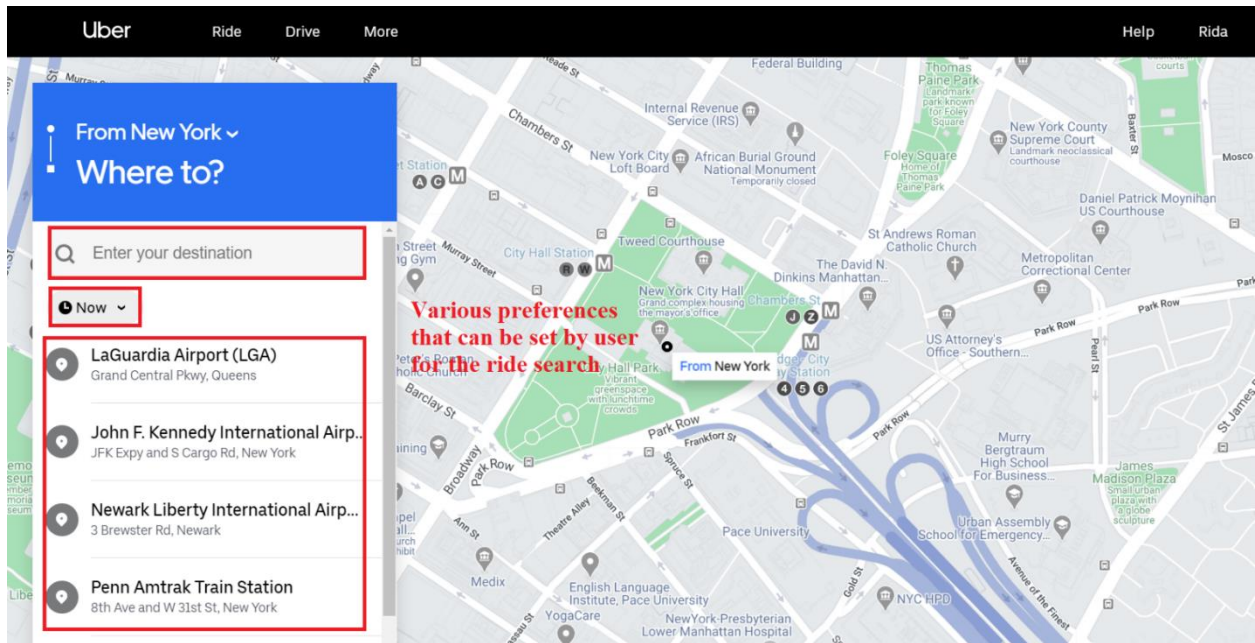

43. **Direct Infringement.** Upon information and belief, Defendant has been directly infringing at least claim 2 of the ‘227 patent in Delaware, and elsewhere in the United States, by

performing actions comprising using or performing the claimed method of providing real-time responses (e.g., generating user-specific customized web pages in real-time) in response to user requests for customized pages such as a user's uber.com page ("Accused Instrumentality"). (E.g., <https://auth.uber.com/login/#>).

44. The Accused Instrumentality performs the step of obtaining user preferences (e.g., Destinations, date, time, etc.), wherein a user's preferences indicate items of interest to that user (e.g., preferences set by user for a ride search).

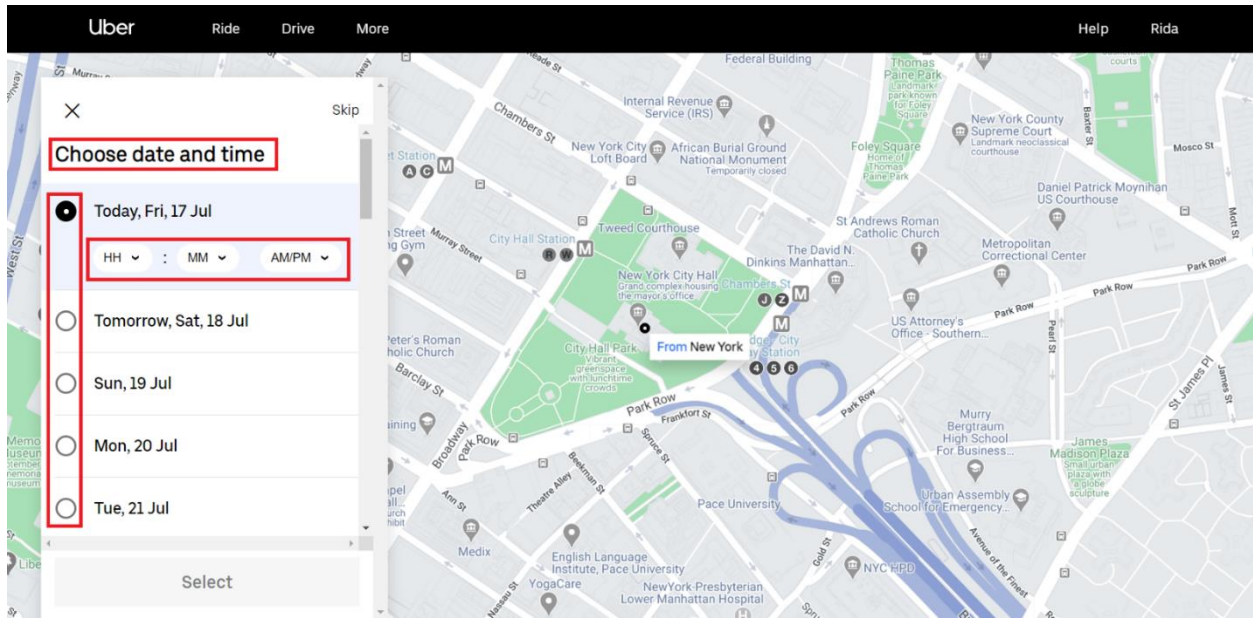

(E.g., https://m.uber.com/looking?uclick_id=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1 (for a particular user)).

(E.g.,

https://m.uber.com/looking?pickup=%7B%22id%22%3A%22ChIJOWg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&uclid_id=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1 (for a particular user)).

(E.g.,

https://m.uber.com/looking?pickup=%7B%22id%22%3A%22ChIJOWg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&scheduled=true&click_id=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1 (for a particular user)).

45. On information and belief, the Accused Instrumentality performs obtaining real-time information from information sources (e.g., currently available ride bookings obtained from various information sources such as a multitude of databases); and stores the real-time information in a storage device (e.g., currently available rides will be pulled from an information source and stored, at least temporarily, on the uber.com web/API server and/or a user's computer). The code below shows uber.com pulling ride information from information sources.

(E.g., https://m.uber.com/looking?drop=%7B%22id%22%3A%22746b65d9-95af-9ef9-abd9-02c6692f6221%22%2C%22addressLine1%22%3A%22LaGuardia%20Airport%20%28LGA%29%22%2C%22addressLine2%22%3A%22Grand%20Central%20Pkwy%2C%20Queens%22%2C%22provider%22%3A%22uber_places%22%2C%22locale%22%3A%22en-US%22%2C%22latitude%22%3A40.7726468%2C%22longitude%22%3A-73.872161%7D&pickup=%7B%22id%22%3A%22ChIJOwg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&uclid=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1&vehicle=b8e5c464-5de2-4539-a35a-986d6e58f186 (for a particular user)).

Currently available ride information retrieved from information source

(E.g., [36](https://m.uber.com/looking?drop=%7B%22id%22%3A%22746b65d9-95af-9ef9-abd9-02c6692f6221%22%2C%22addressLine1%22%3A%22LaGuardia%20Airport%20%28LGA%29%22%2C%22addressLine2%22%3A%22Grand%20Central%20Pkwy%2C%20Queens%22%2C%22provider%22%3A%22uber_places%22%2C%22locale%22%3A%22en-US%22%2C%22latitude%22%3A40.7726468%2C%22longitude%22%3A-73.872161%7D&pickup=%7B%22id%22%3A%22ChIJOwg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&uclick_id=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1&vehicle=b8e5c464-5de2-</p></div><div data-bbox=)

[4539-a35a-986d6e58f186](#) (for a particular user)).

46. On information and belief, the Accused Instrumentality combines the user preferences (*e.g.*, user preferences include preferences tied to a user's account which are pulled upon user login and the search terms inputted by a user such as preferences set by the user for a ride booking search) for the user and a template (*e.g.*, a generic webpage template) to form a template program specific to a user (*e.g.*, following a user's login, a user specific template will be used to create customized pages for user that display user-specific information such as the user's name and search results). As shown below, uber.com uses a generic template to define how the webpage should generally be laid out and displayed. Then uber.com will then combine the template with customized data pulled based upon a user's search inputs and user login to create a template program executable by a user's browser, so that the customized webpage can be displayed to the user.

(E.g., https://m.uber.com/looking?drop=%7B%22id%22%3A%22746b65d9-95af-9ef9-abd9-02c6692f6221%22%2C%22addressLine1%22%3A%22LaGuardia%20Airport%20%28LGA%29%22%2C%22addressLine2%22%3A%22Grand%20Central%20Pkwy%2C%20Queens%22%2C%22provider%22%3A%22uber_places%22%2C%22locale%22%3A%22en-US%22%2C%22latitude%22%3A40.7726468%2C%22longitude%22%3A-73.872161%7D&pickup=%7B%22id%22%3A%22ChIJOwg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&uclick_id=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1&vehicle=b8e5c464-5de2-4539-a35a-986d6e58f186 (for a particular user)).

50. Plaintiff has been damaged as a result of Defendant’s infringing conduct. Defendant is thus liable to Plaintiff for damages in an amount that adequately compensates

Plaintiff for such Defendant's infringement of the '227 patent, *i.e.*, in an amount that by law cannot be less than would constitute a reasonable royalty for the use of the patented technology, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

51. On information and belief, Defendant has had at least constructive notice of the '227 patent by operation of law, and there are no marking requirements that have not been complied with.

V. COUNT III
(PATENT INFRINGEMENT OF UNITED STATES PATENT NO. 7,171,414)

52. Plaintiff incorporates the above paragraphs herein by reference.

53. On January 30, 2007, United States Patent No. 7,171,414 ("the '414 Patent") was duly and legally issued by the United States Patent and Trademark Office. The '414 Patent is titled "Dynamic Page Generator." A true and correct copy of the '414 Patent is attached hereto as Exhibit G and incorporated herein by reference.

54. Digi Portal is the assignee of all right, title and interest in the '414 patent, including all rights to enforce and prosecute actions for infringement and to collect damages for all relevant times against infringers of the '414 Patent. Accordingly, Digi Portal possesses the exclusive right and standing to prosecute the present action for infringement of the '414 Patent by Defendant.

55. The application leading to the '414 patent was filed September 10, 1999, which was a continuation of application no. 08/873,975, which issued as the '227 patent. (Ex. G at cover). The '414 patent was first assigned to Yahoo! Inc. (*Id.*).

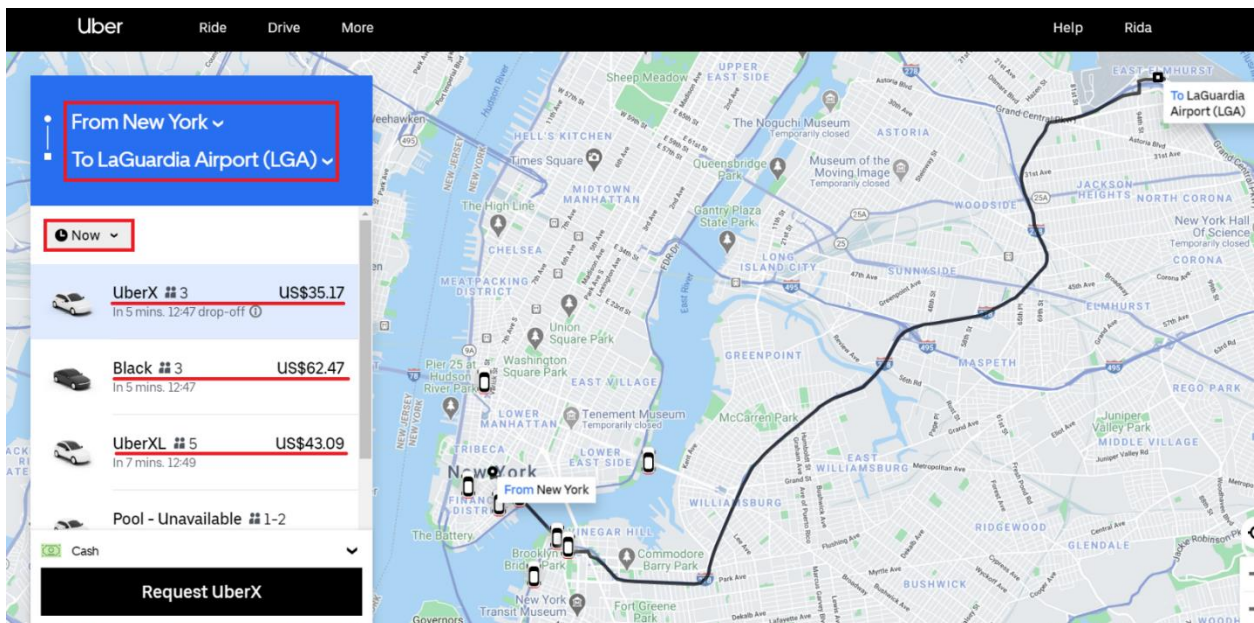

56. The invention in the '414 Patent relates to the field of customized information presentation on the web; more specifically, providing customized pages that are quickly served and scalable to handle many users simultaneously. (*Id.* at col. 1:29-33).

57. The '414 Patent shares the identical specification as the '342 patent and therefore Digi Portal incorporates the background and discussion of the invention in Paragraphs 13-25. Furthermore, the prosecution history of the '414 patent highlights advantages and unconventional features of the claimed invention including the "storing real-time information in a shared local storage device." An example of this limitation is when live data used to fill templates is stored local to the page server which is handling user requests for custom web pages. (Ex. I at 8; Ex. G at col. 2:11-15). Every piece of information that a person can request on a page is storable in a shared memory closely coupled to a page generator. (Ex. I at 9; Ex. G at col. 4:43-58). Unlike the prior art CGI process that required time consuming calls to other servers, storing real-time information in a shared local storage device, allows for any custom page to be built within the page server thereby eliminating the need to make requests from other servers for portions of the live data. (Ex. I at 9; Ex. G at col. 2:25-31).

58. Furthermore, as show in the prosecution history of the '414 Patent, it was unconventional to receive the template program from one of at least two location, the frequency of the user request for the customized page determines the retrieval location of the template program. (Ex. H at 9-10). In the prior art, the published web site was stored on a server and provided from one server location regardless of the frequency of the user requests for the web site. (*Id.*). The examiner agreed that the claim was allowable because the prior art did not disclose that in a page server coupled to a network a method of providing a customized page to a user, the customized page is customized according to the user's preferences, and the template is received from one of at least two locations, the location determined from frequency of the user request for the customized page. (Ex. J at 3).

59. **Direct Infringement.** Upon information and belief, Defendant has been directly infringing at least claims 1 and 3 of the ‘414 patent in Delaware, and elsewhere in the United States, by performing actions comprising using or performing the claimed method using the <https://www.uber.com/> website (“Accused Instrumentality”). The Accused Instrumentality utilizes a page server (*e.g.*, an uber.com web server) coupled to a network, which provides a customized page to a user (*e.g.*, a webpage which displays available ride bookings meeting a user’s search parameters), wherein the customized page is customized according to the user’s preferences (*e.g.*, a user’s selected location’s relevant currently available rides).

60. On information and belief, the Accused Instrumentality performs the step of obtaining real-time information from information source (*e.g.*, currently available ride bookings obtained from various information sources such as a multitude of databases) and stores the real-time information in a shared local storage device (*e.g.*, currently available rides will be pulled from an information source and stored, at least temporarily, on the uber.com web/API server and/or a user’s computer). As shown below, uber.com uses an API and or script to gather ride information from information source in real time.

(E.g., https://m.uber.com/looking?drop=%7B%22id%22%3A%22746b65d9-95af-9ef9-abd9-02c6692f6221%22%2C%22addressLine1%22%3A%22LaGuardia%20Airport%20%28LGA%29%22%2C%22addressLine2%22%3A%22Grand%20Central%20Pkwy%2C%20Queens%22%2C%22provider%22%3A%22uber_places%22%2C%22locale%22%3A%22en-US%22%2C%22latitude%22%3A40.7726468%2C%22longitude%22%3A-73.872161%7D&pickup=%7B%22id%22%3A%22ChIJOwg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&uclid_id=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1&vehicle=b8e5c464-5de2-4539-a35a-986d6e58f186 (for particular user)).

(E.g., [57](https://m.uber.com/looking?drop=%7B%22id%22%3A%22746b65d9-95af-9ef9-abd9-02c6692f6221%22%2C%22addressLine1%22%3A%22LaGuardia%20Airport%20%28LGA%29%22%2C%22addressLine2%22%3A%22Grand%20Central%20Pkwy%2C%20Queens%22%2C%22provider%22%3A%22uber_places%22%2C%22locale%22%3A%22en-US%22%2C%22latitude%22%3A40.7726468%2C%22longitude%22%3A-73.872161%7D&pickup=%7B%22id%22%3A%22ChIJOwg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&uclid=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1&vehicle=b8e5c464-5de2-</p></div><div data-bbox=)

[4539-a35a-986d6e58f186](#) (for particular user)).

61. On information and belief, the Accused Instrumentality performs the step of storing a user-specific template program for the user in a data structure associated with a user identifier unique to the user (*e.g.*, a template program will be created for a user's particular search so that said template program can be executed as to display the user's search results as a webpage; said template program is assigned an identifying number so it can be tied to a particular user's search query; said template program will be stored, at least temporarily on the uber.com server and/or user's computer). The Accused Instrumentality uses the template program that is unique to the user which is generated using customization information unique to the user and a global template that is generic to a plurality of users. As shown below, after a user logs in, uber.com can display rides for which user has made bookings. As such, a user-specific template program utilized to create the displayed websites that show a user's name and user's previous ride bookings. For showing these, user's bookings information must be stored in a database wherein said template program is tied to a user's log in information/account.

(*E.g.*, https://m.uber.com/looking?uclick_id=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1 (for a particular user)).

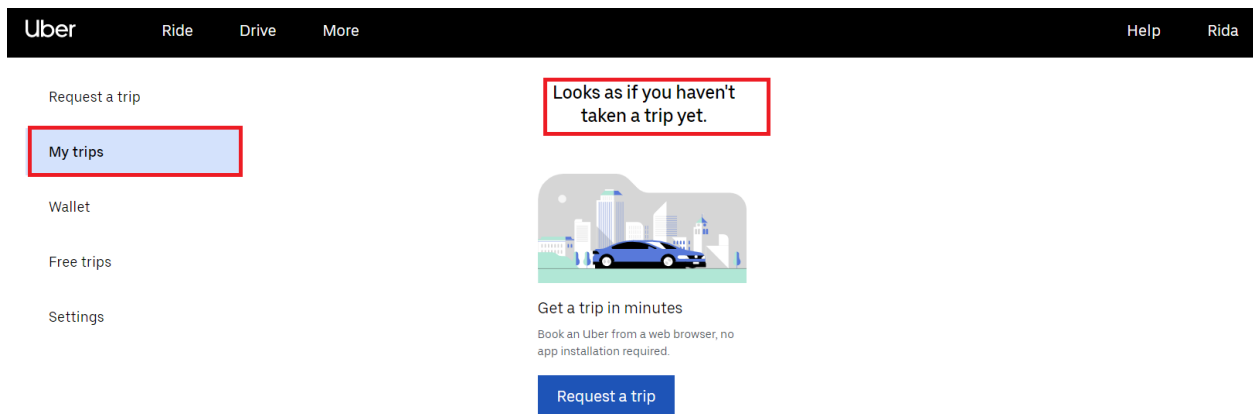

(E.g., https://riders.uber.com/trips?_ga=2.183981797.2134784678.1594964810-2095567621.1594964810&state=UgTKRZP0m_qO9C7MnJN_dWyIDIoTRRKv3JDSNty_Duk%3D&csid=Nq3d6AhYVU-X9h-9cH236Q# (for a particular user)).

62. Upon information and belief, the Accused Instrumentality performs the step of receiving, from the user, and at the page server, a user request for a customized page (e.g., the uber.com server will receive a user's request for ride information meeting their inputted parameters) and determines a user identifier associated with the request (e.g., the uber.com server will assign an identifying number to the user's search). The Accused Instrumentality uses the template program that is unique to the user which is generated using customization information unique to the user and a global template that is generic to a plurality of users. As shown below, after a user logs in, uber.com can display rides for which user has made bookings. As such, a user-specific template program utilized to create the displayed websites that show a user's name and user's previous ride bookings. For showing these, user's bookings information must be stored in a database wherein said template program is tied to a user's log in information/account.

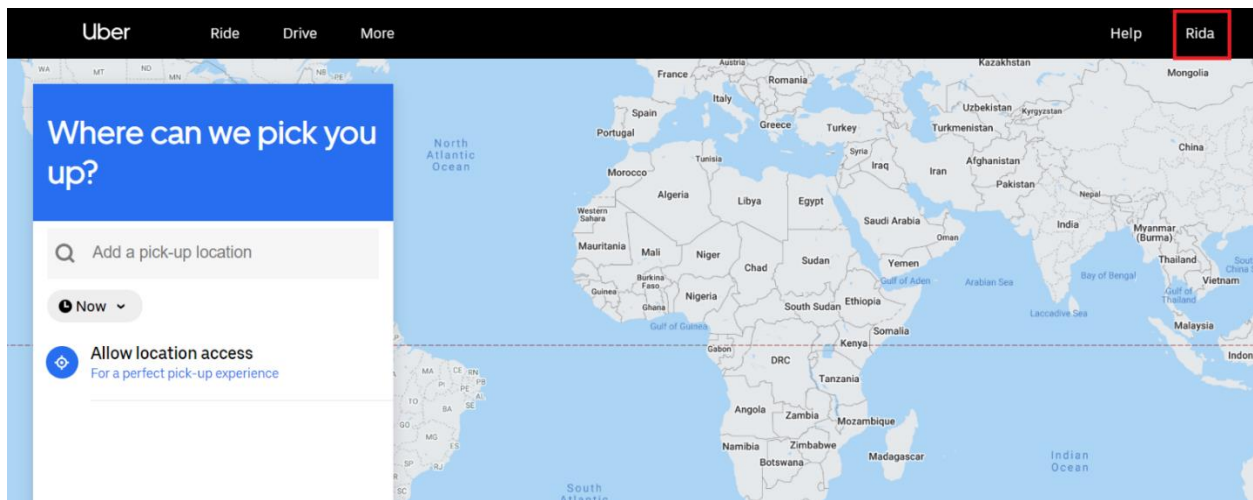

(E.g., https://m.uber.com/looking?uclick_id=9e3ea7e-bd68-4fef-aebe-a3ca464d42f1 (for a particular user)).

(E.g., https://riders.uber.com/trips?_ga=2.183981797.2134784678.1594964810-2095567621.1594964810&state=UgTKRZP0m_qO9C7MnJN_dWyIDIoTRRKv3JDSNty_Duk%3D&csid=Nq3d6AhYVU-X9h-9cH236Q# (for a particular user)).

63. On information and belief, the Accused Instrumentality performs the step of receiving a template program specific to the user using the determined user identifier associated with the user request (e.g., the uber.com server will receive a template program, which is the code and data that represents the search results webpage to be delivered to a user, that is

identified by a number and linked to a user and their search query). The Accused Instrumentality uses the template program that is unique to the user which is generated using customization information unique to the user and a global template that is generic to a plurality of users. As shown below, after a user logs in, uber.com can display rides for which user has made bookings. As such, a user-specific template program utilized to create the displayed websites that show a user's name and user's previous ride bookings. For showing these, user's bookings information must be stored in a database wherein said template program is tied to a user's log in information/account.

(E.g., https://m.uber.com/looking?uclick_id=9e3ea7e-bd68-4fef-aebe-a3ca464d42f1 (for a particular user)).

(E.g., https://riders.uber.com/trips?_ga=2.183981797.2134784678.1594964810-2095567621.1594964810&state=UgTKRZP0m_qO9C7MnJN_dWyIDIoTRRKv3JDSNty_Duk%3D&csid=Nq3d6AhYVU-X9h-9cH236Q# (for a particular user)).

64. On information and belief, the Accused Instrumentality performs the step of receiving a template program from one of at least two locations, the location determined from the frequency of the user request for the customized page (e.g., the code and objects making up a webpage delivered to the user may be fetched from a main server or from a user's local cache depending on how often the user inputs a similar search query). In at least testing and usage, the Accused Instrumentality practices receiving a template program (e.g., software instructions and data used for rendering a particular user's search results page such as a JavaScript page) that is unique to the user (e.g., JavaScript pages will be specific to a user because the content can be modified by and/or customized for a user (e.g., after a user logs in, pages can display customized information such as a user's name, in addition to booking search results tied to a user's inputted preferences)) and based on user configuration information (e.g., a user can customize the content of their templates and what will be rendered and displayed using said templates by entering information such as their location and by logging in to their account) the user configuration

information being supplied by the user (*e.g.*, user will have supplied their name and any other preferences tied to their account and will have input preferences applicable to a booking search) and used to build the template program that is unique to the user (*e.g.*, user configuration information is used to modify templates, create instructions, and designate appropriate data retrieval for rendering the user's specific page) and wherein the template program is received from one of at least two locations (*e.g.*, the data and templates comprising a user's page may be retrieved from a main server/disk storage or other sources such as local cache, CDN server, and cookies), the location determined from the frequency of the user request for the customized page (*e.g.*, based on the frequency at which a user logs in or accesses the uber.com page, the data comprising the users page may be stored at a main server or at other locations such as local cache, a CDN server, or cookies). Webpage information can be stored in a JavaScript object that is used in logic to display various available rides, a user's name, and other site logic-based conditions. The template information is stored in multiple locations: (1) At runtime, in a JavaScript object with the data structure called Context Data; (2) Within browser local storage; and (3) browser cookies.

Currently available ride information retrieved from information source

(E.g., https://m.uber.com/looking?drop=%7B%22id%22%3A%22746b65d9-95af-9ef9-abd9-02c6692f6221%22%2C%22addressLine1%22%3A%22LaGuardia%20Airport%20%28LGA%29%22%2C%22addressLine2%22%3A%22Grand%20Central%20Pkwy%2C%20Queens%22%2C%22provider%22%3A%22uber_places%22%2C%22locale%22%3A%22en-US%22%2C%22latitude%22%3A40.7726468%2C%22longitude%22%3A-73.872161%7D&pickup=%7B%22id%22%3A%22ChIJOwg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%2

<https://www.google.com/maps/@40.7127753,-74.0059728,15z> (for a particular user)).

67. On information and belief, the Accused Instrumentality performs the step of receiving user preferences and combines the user preferences (*e.g.*, the search terms inputted by a user such as Preferences set by user for rides search) for the user and a template (*e.g.*, a generic webpage template) to form a template program specific to a user (*e.g.*, the code for the entire webpage that utilizes a generic template and user’s inputted search terms to create a webpage that is customized to display a user’s search results). As shown below, uber.com uses a generic template to define how the webpage should generally be laid out and displayed. Uber.com will then combine the template with customized data pulled based upon a user’s search inputs and user login to create a template program executable by a user’s browser, so that the customized webpage can be displayed to the user.

68. Plaintiff has been damaged as a result of Defendant's infringing conduct. Defendant is thus liable to Plaintiff for damages in an amount that adequately compensates Plaintiff for such Defendant's infringement of the '414 patent, *i.e.*, in an amount that by law cannot be less than would constitute a reasonable royalty for the use of the patented technology, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

69. On information and belief, Defendant has had at least constructive notice of the '414 patent by operation of law, and there are no marking requirements that have not been complied with.

VI. COUNT IV
(PATENT INFRINGEMENT OF UNITED STATES PATENT NO. 7,565,359)

70. Plaintiff incorporates the above paragraphs herein by reference.

71. On July 21, 2009, United States Patent No. 7,565,359 ("the '359 Patent") was duly and legally issued by the United States Patent and Trademark Office. The '359 Patent is titled "Dynamic Page Generator." A true and correct copy of the '359 Patent is attached hereto as Exhibit K and incorporated herein by reference.

72. Digi Portal is the assignee of all right, title and interest in the '359 patent, including all rights to enforce and prosecute actions for infringement and to collect damages for all relevant times against infringers of the '359 Patent. Accordingly, Digi Portal possesses the exclusive right and standing to prosecute the present action for infringement of the '359 Patent by Defendant.

73. The application leading to the '359 patent was filed January 22, 2007, as a continuation of application no. 09/393,718, which issued as the '414 patent, which was a

continuation of application no. 08/873,975, which issued as the '227 patent. (Ex. K at cover). The '359 patent was first assigned to Yahoo! Inc. (*Id.*).

74. The invention in the '359 Patent relates to the field of customized information presentation on the web; more specifically, providing customized pages that are quickly served and scalable to handle many users simultaneously. (*Id.* at col. 1:22-27).

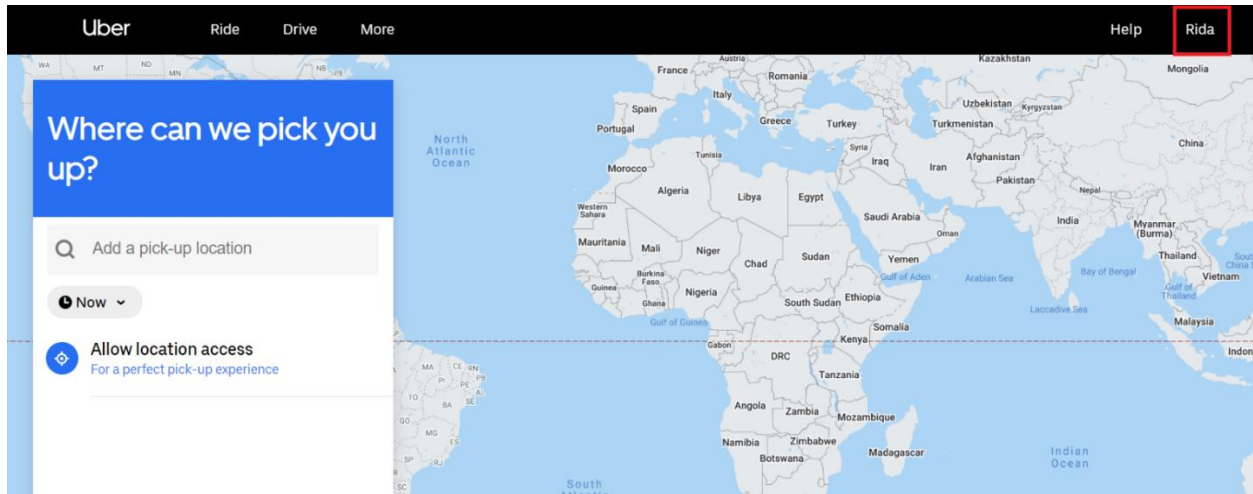

75. The '359 Patent shares the identical specification as the '342 patent and therefore Digi Portal incorporates the background and discussion of the invention in Paragraphs 13-25. Furthermore, the prosecution history of the '359 patent highlights advantages and the unconventional features of the claimed invention. When allowing the claims of the '359 patent, the examiner focused on the last two limitations of the claim stating that executing the template program specific to the user using the real-time information stored in the shared local storage device to generate a customized page; and receiving user preferences for the user, and combining the user preferences with a generic template to form the template specific to the user, wherein the user preferences indicate the items of interest to the user in conjunction with the other limitations was not found in the prior art. (Ex. L at 8).

76. **Direct Infringement.** Upon information and belief, Defendant has been directly infringing at least claim 10 of the '359 patent in Delaware, and elsewhere in the United States, by performing actions comprising making and/or using the claimed computer-readable medium comprising instructions for generating customized pages that are customized according to user preferences that performs the method steps required by the claim, including without limitation through the method implemented of providing a user's uber.com page ("Accused Instrumentality"). The Accused Instrumentality utilizes a computer-readable medium comprising instructions (*e.g.*, code that is executed to create webpages) for generating

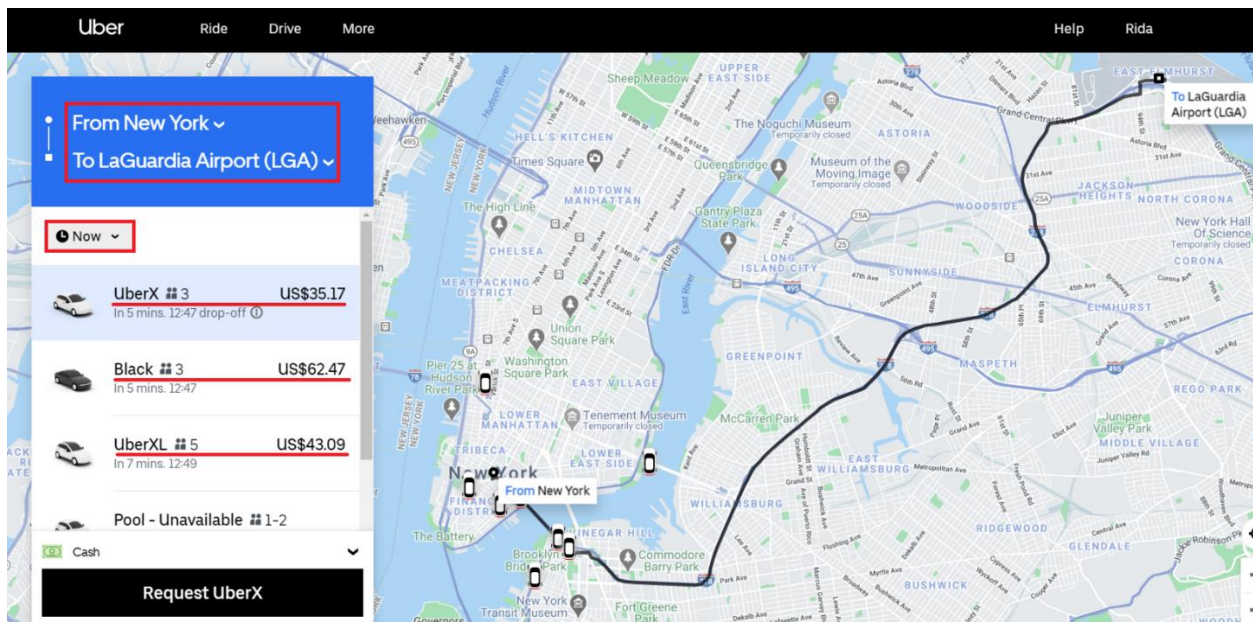

customized pages (*e.g.*, user-specific search results and web page with username), wherein the customized pages are customized according to user preferences (*e.g.*, web pages will be customized to show rides meeting a user's parameters).

77. On information and belief, the Accused Instrumentality performs the step of storing the real-time information in a shared local storage device (*e.g.*, rides information will be pulled from a storage server/database and sent to an uber.com local web/API server for processing and display). The accused instrumentality also practices storing a user-specific template program (*e.g.*, instructions and data used to generate a custom user webpage are stored at least temporarily) for a plurality of users, wherein each template program indicates items of interest to a user (*e.g.*, each user's template program will include instructions, code, etc. that dictates the information that should be displayed for a user based on their search query), and is associated with a user identifier (*e.g.*, in order for a user to see information specific to them and their search, uber.com assigns each user search an identifying number or user id), wherein the user identifier is associated with a user request (*e.g.*, a user search will be linked to an identifying number or user id) for a customized page. As shown below, uber.com uses an API and or script to gather ride information from information source in real time. The Accused Instrumentality stores a user-specific template program for the user in a data structure associated with a user identifier unique to the user (*e.g.* a template program will be created for a user's particular search so that said template program can be executed as to display the user's search results as a webpage; said template program is assigned an identifying number so it can be tied to a particular user's search query; said template program will be stored, at least temporarily on an uber.com server). The Accused Instrumentality uses the template program that is unique to the user which is generated using customization information unique to the user and a global template

that is generic to a plurality of users. After a user logs in, uber.com can display rides for which user has made registrations. As such, a user-specific template program utilized to create the displayed websites that show a user’s name and user’s previous ride bookings. For showing these, user’s bookings information must be stored in a database wherein said template program is tied to a user’s log in information/account.

78. The Accused Instrumentality performs the step of receiving a template program (e.g., code, instructions, etc. that are executed to create a user page) specific to the user using the user identifier (e.g., as explained above, in order to display pages customized for a user, each

search is assigned an identifying number), wherein the template program is received from one of at least two locations (*e.g.*, main storage at an uber.com server or local device storage), the location based upon a frequency of user requests for the customized page. In at least testing and usage, the Accused Instrumentality practices receiving a template program (*e.g.*, software instructions and data used for rendering a particular user's search results page such as a JavaScript page) that is unique to the user (*e.g.*, JavaScript pages will be specific to a user because the content can be modified by and/or customized for a user (*e.g.*, after a user logs in, pages can display customized information such as a user's name, in addition to booking search results tied to a user's inputted preferences)) and based on user configuration information (*e.g.*, a user can customize the content of their templates and what will be rendered and displayed using said templates by entering information such as their location and by logging in to their account) the user configuration information being supplied by the user (*e.g.*, a user will have supplied their name and any other preferences tied to their account and will have input preferences applicable to a booking search) and used to build the template program that is unique to the user (*e.g.*, user configuration information is used to modify templates, create instructions, and designate appropriate data retrieval for rendering the user's specific page) and wherein the template program is received from one of at least two locations (*e.g.*, the data and templates comprising a user's page may be retrieved from a main server/disk storage or other sources such as local cache, CDN server, and cookies), the location determined from the frequency of the user request for the customized page (*e.g.*, based on the frequency at which a user logs in or accesses the uber.com page, the data comprising the users page may be stored at a main server or at other locations such as local cache, a CDN server, or cookies). Webpage information can be stored in a JavaScript object that is used in logic to display various available rides, a user's name, and

other site logic-based conditions. The template information is stored in multiple locations: (1) At runtime, in a JavaScript object with the data structure called Context Data; (2) Within browser local storage; and (3) browser cookies.

[4539-a35a-986d6e58f186](#) (for a particular user)).

80. On information and belief, the Accused Instrumentality performs the step of receiving the user preferences and combines the user preferences (*e.g.*, the search terms inputted by a user such as Preferences set by user for rides search) for the user and a template (*e.g.*, a generic webpage template) to form a template program specific to a user (*e.g.*, the code for the entire webpage that utilizes a generic template and user's inputted search terms to create a webpage that is customized to display a user's search results). As shown below, uber.com uses a generic template to define how the webpage should generally be laid out and displayed. Uber.com will then combine the template with customized data pulled based upon a user's search inputs and user login to create a template program executable by a user's browser, so that the customized webpage can be displayed to the user.

(*E.g.*, <https://m.uber.com/looking?drop=%7B%22id%22%3A%22746b65d9-95af-9ef9-abd9-02c6692f6221%22%2C%22addressLine1%22%3A%22LaGuardia%20Airport%20%28LGA%2>

81. Plaintiff has been damaged as a result of Defendant's infringing conduct. Defendant is thus liable to Plaintiff for damages in an amount that adequately compensates Plaintiff for such Defendant's infringement of the '359 patent, *i.e.*, in an amount that by law cannot be less than would constitute a reasonable royalty for the use of the patented technology, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

82. On information and belief, Defendant has had at least constructive notice of the '359 patent by operation of law, and there are no marking requirements that have not been complied with.

83. Digi Portal is asserting solely method claims and therefore no marking issue arises. Regardless, on information and belief, to the extent required, all marking requirements have been complied with.

VII. COUNT V
(PATENT INFRINGEMENT OF UNITED STATES PATENT NO. 9,626,342)

84. Plaintiff incorporates the above paragraphs herein by reference.

85. On April 18, 2017, United States Patent No. 9,626,342 ("the '342 Patent") was duly and legally issued by the United States Patent and Trademark Office. The '342 Patent is titled "Dynamic Page Generator." The '342 patent is not subject to a terminal disclaimer and its term is extended under 35 U.S.C. 154(b) by 891 days. (Ex. M). A true and correct copy of the '342 Patent is attached hereto as Exhibit M and incorporated herein by reference.

86. Digi Portal is the assignee of all right, title, and interest in the '342 patent, including all rights to enforce and prosecute actions for infringement and to collect damages for all relevant times against infringers of the '342 patent. Accordingly, Digi Portal possesses the exclusive right and standing to prosecute the present action for infringement of the '342 patent by Defendant.

87. The application leading to the '342 patent was filed December 21, 2012, as a continuation of application no. 11/842,095, which was a continuation of application no. 11/656,636, which is a continuation of 09/393,718, which was a continuation of application no. 08/873,975, which issued as the '227 patent. (Ex. M at cover).

88. The invention in the '342 patent relates to the field of customized information presentation on the web; more specifically, providing customized pages that are quickly served and scalable to handle many users simultaneously. (*Id.* at col. 1:33-37).

89. The '342 patent shares the identical specification as the '854 patent and therefore Digi Portal incorporates the background and discussion of the invention in Paragraphs 13-25.

90. **Direct Infringement.** Upon information and belief, Defendant has been directly infringing at least claims 1 and 7 of the '342 patent in Delaware, and elsewhere in the United States, by performing actions comprising performing the claimed method steps, including without limitation through the method implemented of providing a user's uber.com page ("Accused Instrumentality"). The Accused Instrumentality practices the method of responding to a user request (*e.g.*, a user login request, search initiation, etc.) for a customized page (*e.g.*, a user's customized home and search pages on the uber.com website). (*E.g.*, <https://auth.uber.com/login/#>; <https://m.uber.com/looking?uclid=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1>).

91. On information and belief, the Accused Instrumentality performs the step of generating, via at least one server computer (*e.g.*, uber.com servers), a template program unique to the user (*e.g.*, a template program will be unique to a user because it is composed of instruction, code, and data that is processed/executed to create a webpage customized to a user (*e.g.*, after a user logs in, the pages displayed to the user will show the user's name); Uber's

server provides at least a portion of the unique template program, such as a generic template containing JavaScript and other code that executes at a user's computer to create a customized webpage), the template program being used to form the user's customized web page (*e.g.*, a webpage with customized content such as the display of a user's name, and ride search results), wherein the template program is generated using customization information unique to the user (*e.g.*, user account preferences/data and user search parameters) and a global template that is generic to a plurality of users (*e.g.*, a generic template that dictates web page layout). combines the user customization information (*e.g.*, preferences tied to a user account that is logged in, and the search terms inputted by a user such as preferences set by user for a ride booking search) for the user and a generic template (*e.g.*, a generic webpage template) to form a template program specific to a user (*e.g.*, the code for the entire webpage that utilizes a generic template in combination with preferences tied to a logged in user account and a user's inputted search terms to create a customized webpage for display). As shown below, uber.com uses a generic template to define how the webpage should generally be laid out and displayed. Uber.com will then combine the template with customized data pulled based upon a user's search inputs and preferences tied to a logged in user account to create a template program executable by a user's browser, so that the customized webpage can be displayed to the user.

Content obtained from information sources, combined within the template

(E.g., [105](https://m.uber.com/looking?drop=%7B%22id%22%3A%22746b65d9-95af-9ef9-abd9-02c6692f6221%22%2C%22addressLine1%22%3A%22LaGuardia%20Airport%20%28LGA%29%22%2C%22addressLine2%22%3A%22Grand%20Central%20Pkwy%2C%20Queens%22%2C%22provider%22%3A%22uber_places%22%2C%22locale%22%3A%22en-US%22%2C%22latitude%22%3A40.7726468%2C%22longitude%22%3A-73.872161%7D&pickup=%7B%22id%22%3A%22ChIJOwg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&uclid_id=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1&vehicle=b8e5c464-5de2-</p></div><div data-bbox=)

[4539-a35a-986d6e58f186](#) (for a particular user)).

92. On information and belief, the Accused Instrumentality performs the step of executing, via the at least one server computer (*e.g.*, an uber.com server or Uber-controlled server) the user's template program (*e.g.*, a template program is composed of instructions, code and data used to create a user webpage (*e.g.*, after a user logs in, the pages displayed to the user will show the user's name); the Uber main server provides a generic template that can be customized to a user, additionally, Uber servers will provide content that corresponds to a user's request/preferences; thus, although the final webpage may be created on a user's computer via their browser, Uber servers are involved in the execution process of the template program used to create said webpage) to generate the user's customized web page (*e.g.*, a ride booking search results page displayed with other customized info such as a user's name), the user's customized web page including real-time information selected for the user's customized web page based on customization information unique to the user (*e.g.*, ride availability information will be gathered based upon a user's search parameters). As shown below, uber.com uses an API and or script to gather ride information from information source in real time.

[73.872161%7D&pickup=%7B%22id%22%3A%22ChIJOWg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&uclid=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1&vehicle=b8e5c464-5de2-4539-a35a-986d6e58f186](https://www.google.com/maps/place/73.872161%7D&pickup=%7B%22id%22%3A%22ChIJOWg_06VPwokRYv534QaPC8g%22%2C%22addressLine1%22%3A%22New%20York%22%2C%22addressLine2%22%3A%22NY%22%2C%22provider%22%3A%22google_places%22%2C%22locale%22%3A%22en-GB%22%2C%22latitude%22%3A40.7127753%2C%22longitude%22%3A-74.0059728%7D&uclid=9e3eaa7e-bd68-4fef-aebe-a3ca464d42f1&vehicle=b8e5c464-5de2-4539-a35a-986d6e58f186) (for a particular user)).

94. On information and belief, the Accused Instrumentality, in response to receiving a subsequent request for the user's customized web page (*e.g.*, the receipt of a user's search initiation and login) practices receiving, via the at least one server computer (*e.g.*, an uber.com server) a template program (*e.g.*, code, instructions, etc. that are executed to create a user page) that is unique to the user (*e.g.*, a template program will be unique to a user because it is composed of instruction, code, and data that is processed/executed to create a webpage customized to a user (*e.g.*, after a user logs in, the pages displayed to the user will show the user's name) from one of at least two locations, the location based upon a frequency of user requests for the customized page (*e.g.*, certain components of the webpage may be retrieved from local cache, CDN servers, or cookies, as opposed to a main server, if said components were kept in cache due to a user's frequent request for the same or similar page). In at least testing and usage, the Accused Instrumentality practices receiving a template program (*e.g.*, software instructions and data used for rendering a particular user's search results page such as a JavaScript page) that is unique to the user (*e.g.*, JavaScript pages will be specific to a user because the content can be modified by and/or customized for a user (*e.g.*, after a user logs in, pages can display customized information such as a user's name, in addition to booking search results tied to a user's inputted preferences)) and based on user configuration information (*e.g.*, a

user can customize the content of their templates and what will be rendered and displayed using said templates by entering information such as their location and by logging in to their account) the user configuration information being supplied by the user (*e.g.*, a user will have supplied their name and any other preferences tied to their account and will have input preferences applicable to a booking search) and used to build the template program that is unique to the user (*e.g.*, user configuration information is used to modify templates, create instructions, and designate appropriate data retrieval for rendering the user's specific page) and wherein the template program is received from one of at least two locations (*e.g.*, the data and templates comprising a user's page may be retrieved from a main server/disk storage or other sources such as local cache, CDN server, and cookies), the location determined from the frequency of the user request for the customized page (*e.g.*, based on the frequency at which a user logs in or accesses the uber.com page, the data comprising the users page may be stored at a main server or at other locations such as local cache, a CDN server, or cookies). Webpage information can be stored in a JavaScript object that is used in logic to display various available rides, a user's name, and other site logic-based conditions. The template information is stored in multiple locations: (1) At runtime, in a JavaScript object with the data structure called Context Data; (2) Within browser local storage; and (3) browser cookies.

95. On information and belief, the Accused Instrumentality performs the step of executing, via the at least one server computer (e.g., an uber.com server) the user's template program (e.g., a template program is composed of instructions, code and data used to create a user webpage (e.g., after a user logs in, the pages displayed to the user will show the user's name); the Uber main server provides a generic template that can be customized to a user, additionally, Uber servers will provide content that corresponds to a user's request/preferences; thus, although the final webpage may be created on a user's computer via their browser, Uber servers are involved in the execution process of the template program used to create said webpage) to generate the user's customized web page (e.g., a ride booking search results page displayed with other customized info such as a user's name), the user's customized web page including real-time information selected for the user's customized web page based on customization information unique to the user (e.g., ride availability information will be gathered based upon a user's search parameters) in response to the subsequent request based on the customization information unique to the user (e.g., a web page displaying ride booking search results will be created and displayed based upon a user's inputted search parameters and can be further customized based on account preferences (e.g., displaying a user's name based on their

account login)). As shown below, uber.com uses an API and or script to gather ride information from information source in real time.

Plaintiff for such Defendant's infringement of the '342 patent, *i.e.*, in an amount that by law cannot be less than would constitute a reasonable royalty for the use of the patented technology, together with interest and costs as fixed by this Court under 35 U.S.C. § 284.

99. Digi Portal is asserting solely method claims and therefore no marking issue arises. Regardless, on information and belief, to the extent required, all marking requirements have been complied with.

VIII. JURY DEMAND

Plaintiff, under Rule 38 of the Federal Rules of Civil Procedure, requests a trial by jury of any issues so triable by right. As shown below, targeted advertisement is implemented using location and demographic information provided by the user.

IX. PRAYER FOR RELIEF

WHEREFORE, Plaintiff respectfully requests that the Court find in its favor and against Defendant, and that the Court grant Plaintiff the following relief:

- a. Judgment that one or more claims of United States Patent No. 8,352,854 have been infringed, either literally and/or under the doctrine of equivalents, by Defendant;
- b. Judgment that one or more claims of United States Patent No. 5,983,227 have been infringed, either literally and/or under the doctrine of equivalents, by Defendant;
- c. Judgment that one or more claims of United States Patent No. 7,171,414 have been infringed, either literally and/or under the doctrine of equivalents, by Defendant;
- d. Judgment that one or more claims of United States Patent No. 7,565,359 have been infringed, either literally and/or under the doctrine of equivalents, by Defendant;
- e. Judgment that one or more claims of United States Patent No. 9,626,342 have been infringed, either literally and/or under the doctrine of equivalents, by Defendant;

- f. Judgment that Defendant account for and pay to Plaintiff all damages to and costs incurred by Plaintiff because of Defendant's infringing activities and other conduct complained of herein, and an accounting of all infringements and damages not presented at trial;
- g. Judgment that damages should be trebled as a result of Defendant's willful infringement;
- j. That Plaintiff be granted pre-judgment and post-judgment interest on the damages caused by Defendant's infringing activities and other conduct complained of herein; and
- k. That Plaintiff be granted such other and further relief as the Court may deem just and proper under the circumstances.
