Case No. '23CV673 GPC DEB

**COMPLAINT FOR PATENT
INFRINGEMENT**

DEMAND FOR JURY TRIAL

1 Plaintiff Clear Imaging Research, LLC (“Clear Imaging,” or “Plaintiff”) files
2 this Complaint for patent infringement against Defendant Apple Inc. (“Apple”) for
3 infringement of 9,860,450 (“the ’450 patent”), 10,171,740 (“the ’740 patent”),
4 10,382,689 (“the ’689 patent”), 11,457,149 (“the ’149 patent”), 11,490,015 (“the
5 ’015 patent”), 11,627,254 (“the ’254 patent”), and 11,627,391 (“the ’391 patent”)
6 (collectively the “patents-in-suit”), pursuant to 35 U.S.C. § 271. The patents-in-suit
7 are attached as Exhibits A-G.

8 **I. PARTIES AND CASE INTRODUCTION**

9 1. Plaintiff Clear Imaging is a limited liability company organized and
10 existing under laws of the State of Delaware. Plaintiff Clear Imaging has its
11 principal place of business in New York and an office at 40 West 25th Street, 9th
12 Floor, New York, New York 10010.

13 2. Upon information and belief, Defendant Apple is a company organized
14 and existing under the laws of the State of California, with its principal place of
15 business at One Apple Park Way, Cupertino, California 95014.

16 3. The patents-in-suit are infringed by at least Apple’s iPhone 6, iPhone
17 6s, iPhone 6 Plus, iPhone 6s Plus, iPhone 7, iPhone 7 Plus, iPhone 8, iPhone 8 Plus,
18 iPhone X, iPhone XR, iPhone XS, iPhone XS Max, iPhone 11, iPhone 11 Pro,
19 iPhone 11 Pro Max, iPhone 12, iPhone 12 Mini, iPhone 12 Pro, iPhone 12 Pro Max,
20 iPhone SE, iPhone 13, iPhone 13 Mini, iPhone 13 Pro, iPhone 13 Pro Max, iPhone
21 14, iPhone 14 Plus, iPhone 14 Pro, iPhone 14 Pro Max, and all iPhones with
22 substantially similar functionality (“Accused iPhones”), iPad Pro 11-inch (all
23 generations), and iPad Pro 12.9 inch (at least 2nd generation and later), iPad Air (at
24 least 3rd generation and later), iPad mini (at least 5th generation and later), iPad (at
25 least 8th generation and later), and all iPads with substantially similar functionality
26 (“Accused iPads”) (collectively the accused iPhones and accused iPads are the
27
28

1 “Accused Products”).¹

2 4. Clear Imaging and Apple have had various in-person meetings,
3 telephonic calls, and other correspondence regarding Clear Imaging’s technology
4 since at least 2017.

5 5. Apple’s biggest competitor, Samsung, licensed Clear Imaging’s
6 valuable technology prior to trial in *Clear Imaging Research, LLC v. Samsung*
7 *Electronics Co. Ltd. and Samsung Electronics America, Inc.*, No. 2:19-cv-326 (E.D.
8 Tex. filed October 1, 2019), which involved some of the same patents at issue here.
9 Numerous others that make camera products have also paid for a license to Clear
10 Imaging’s technology. Apple, however, still has not taken a license to Clear
11 Imaging’s technology and instead has continued to sell hundreds of millions of
12 infringing devices in the U.S. at great profit to Apple.

13 6. Apple has long been aware of Clear Imaging’s technology. Indeed,
14 when Apple sought to patent image and video stabilization technology in 2014 with
15 what became Apple’s U.S. Patent No. 9,300,969, almost a decade after Clear
16 Imaging filed the non-provisional application which the patents-in-suit claim the
17 benefit of priority, the Patent Office rejected Apple’s patent under the “teachings of
18 [Clear Imaging founder] Ozluturk” which taught a particular way of “correcting the
19 discrepancy between the motion of an electronic device and the motion reflected in
20 the video frames of that electronic device.” *See* File History of U.S. Patent No.
21 9,300,969. And even after Apple’s lawyers traveled to the Patent Office to discuss
22 Dr. Ozluturk’s technology and patent disclosure in-person with the Patent Office in
23 2015, the Patent Office still would not allow Apple’s patent until Apple amended its
24 patent claims to a narrower scope. *Id.* Apple has since cited the Clear Imaging
25

26
27 ¹ For clarity, all iterations of these devices, including plus, s, mini, pro, and pro max
28 (including 1st, 2nd, 3rd, and iPhone SE (2020) are accused).

1 patents in dozens of its own own digital image and video stabilization patents,
2 continually recognizing Clear Imaging as a pioneer in the camera field.

3 7. At bottom, after almost 6 years of discussions with Apple and numerous
4 attempts by Clear Imaging to get Apple to take a license for Apple's infringing use
5 of Clear Imaging's technology, as well as Apple's knowledge of Clear Imaging's
6 technology for almost a decade as shown by the Patent Office records, Clear Imaging
7 has no choice but to file this lawsuit to protect its Intellectual Property. Clear
8 Imaging has invested significant resources in developing its Intellectual Property.
9 Apple should not be allowed to use Clear Imaging's Intellectual Property for free,
10 particularly when others, including its biggest competitor Samsung and numerous
11 others, have paid for a license to Clear Imaging's valuable technology that has made
12 groundbreaking advancements in camera technology.

13 **II. CLEAR IMAGING'S BACKGROUND AND HISTORY OF** 14 **GROUNDBREAKING INNOVATION**

15 8. Clear Imaging was founded by Fatih Ozluturk, a Ph.D. in Electrical
16 Engineering, distinguished engineer, the sole inventor on each of the patents-in-suit,
17 and an accomplished innovator. Indeed, Dr. Ozluturk is an inventor on over 235
18 issued U.S. patents and numerous pending patent applications, making him one of the
19 most prolific patentees living in the United States. Dr. Ozluturk has a history of
20 inventing solutions that have proved to be significant beyond camera technology and
21 include multiple generations of wireless technologies, including 3G, and 4G LTE.
22 It has been said that "Fatih's groundbreaking inventions span multiple generations
23 of wireless technology and directly benefit the entire wireless ecosystem and billions
24 of consumers globally."²

27 ² See, e.g., [https://www.businesswire.com/news/home/20110418006517/en/
28 InterDigital-Honors-Dr.-Fatih-Ozluturk-Inventor-Named](https://www.businesswire.com/news/home/20110418006517/en/InterDigital-Honors-Dr.-Fatih-Ozluturk-Inventor-Named).

1 9. After receiving his Ph.D. in Electrical Engineering from the University
2 of Massachusetts, Amherst, Dr. Ozluturk went to work as an engineer at InterDigital,
3 a mobile technology research and development company based in Delaware that
4 currently has over 500 employees. Dr. Ozluturk worked at InterDigital for almost
5 seventeen years and became one of the most prolific inventors at InterDigital. Dr.
6 Ozluturk received a number of awards for his technical leadership and innovation,
7 including the “Outstanding Young Engineer” award from the Long Island Chapter
8 of the IEEE in 2001 and the “Chairman’s Award” from InterDigital in 2011.

9 10. Since leaving InterDigital in 2012, Dr. Ozluturk has been Chief
10 Executive Officer of Clear Imaging. Dr. Ozluturk is also an active member of the
11 New York startup community, where he regularly teaches workshops at startup
12 accelerators on topics related to entrepreneurial management, finance of innovation,
13 and intellectual property. He mentors technology startups as a Venture Partner at a
14 leading New York City startup accelerator.

15 11. In March 2004 and March 2005, Dr. Ozluturk filed the provisional and
16 non-provisional applications, respectively, of which the patents-in-suit claim the
17 benefit of priority. This was years before the very first iPhone was even released.

18 12. Many years after Dr. Ozluturk’s inventions and the release of the first
19 iPhone, Apple would release products with camera features such as Portrait Mode,
20 Cinematic Mode, video stabilization functionality (including Cinematic Video
21 Stabilization, Action Mode, and/or Video Image Stabilization), and image
22 stabilization functionality (including Sensor-Shift Stabilization, Auto-Image
23 Stabilization, Multi-Frame Image Processing, Deep Fusion, and/or Night Mode) and
24 infringe Dr. Ozluturk’s inventions.

25 13. It is noteworthy that Apple released products with the above-
26 functionality many years after Dr. Ozluturk’s inventions, and, for some of this
27 functionality, *a decade or more* after Dr. Ozluturk’s inventions, underscoring how
28

1 pioneering Dr. Ozluturk's work is. And when Apple did finally release its infringing
2 products, Apple would tout them as groundbreaking advancements in camera
3 technology, notwithstanding the fact that Dr. Ozluturk had filed for patent protection
4 on these innovations many years earlier.

5 **III. CLEAR IMAGING AND APPLE**

6 14. Clear Imaging and Apple have had several in-person meetings, dozens
7 of phones phone calls, and exchanged numerous emails and letters over the past six
8 years. An abbreviated discussion of some of the relevant events is below.

9 15. On July 25, 2017, Clear Imaging sent a notice letter to Apple.

10 16. On August 11, 2017, Apple emailed Clear Imaging in response to Clear
11 Imaging's July 25, 2017 letter. On January 2, 2018, Clear Imaging had a call with
12 an Apple in-house counsel. After additional discussion, the parties held an in-person
13 meeting.

14 17. On November 14, 2018, Dr. Ozlutuk and Mr. Garland, Clear Imaging's
15 Chief Licensing Officer, had another in-person meeting with Apple. Clear Imaging
16 stated that the '450 patent is infringed by Apple's video stabilization.

17 18. Apple has never provided any basis of non-infringement of the '450
18 patent.

19 19. On May 21, 2019, Clear Imaging provided Apple additional claim
20 charts, including on the '450 patent and '740 patents.

21 20. Apple has never provided any basis of non-infringement of the '740
22 patent for its dual-camera products, which, on information and belief, began with
23 the iPhone 7 Plus.

24 21. On October 1, 2019, Clear Imaging sued Samsung for patent
25 infringement, including on the '450 and '740 patents.

26 22. In mid-2021, following the resolution of Clear Imaging's litigation with
27 Samsung, Clear Imaging and Apple had multiple conversations but Apple still did
28

1 not take a license.

2 23. On May 16, 2022, Clear Imaging emailed Apple providing a new chart
3 on the '689 patent.

4 24. Apple has never provided any basis of non-infringement or invalidity
5 of the '689 patent.

6 25. On November 18, 2022, Clear Imaging emailed Apple and provided
7 two new charts on the '015 and '149 patents.

8 26. Apple never provided any basis of non-infringement or invalidity of the
9 '015 or '149 patents.

10 27. On January 31, 2023, the parties exchanged additional correspondence.

11 28. After years of correspondence with Apple, Clear Imaging was left with
12 no choice but to file suit to enforce its intellectual property rights.

13 **IV. JURISDICTION AND VENUE**

14 29. This is an action for patent infringement under the patent laws of the
15 United States, 35 U.S.C. § 271. This court has jurisdiction over federal question
16 claims pursuant to 28 U.S.C. §§ 1331 and 1338(a).

17 30. The Court has personal jurisdiction over Apple because Apple is
18 organized and exists under the laws of California.

19 31. Venue is proper in this Court pursuant to 28 U.S.C. §§ 1391 and
20 1400(b).

21 32. Venue is appropriate under 28 U.S.C. § 1400(b) at least because Apple
22 is incorporated in California and because Apple has committed acts of infringement
23 and has a regular and established place of business in this district.

24 33. Apple's acts of infringement in this district include but are not limited
25 to sales of the Accused Products at Apple Store locations in this district, including
26 but not limited to 7007 Friars Road, San Diego, CA 92108 and 4505 La Jolla Village
27 Drive, San Diego, CA 92122.

28

1 34. Apple's Apple Stores in San Diego County alone employ at least 600
2 people, and likely much more.³

3 35. In addition to the Apple Stores, Apple has a regular and established
4 place of business in University City, San Diego, including a "100,000 square-foot
5 research/office building" and a second 204,000 square-foot building employing
6 thousands of Apple employees.⁴ Apple states that the San Diego "location has plans
7 for extensive growth throughout this area."⁵ Indeed, Apple is currently "one of the
8 top technology employers in the greater San Diego area."⁶ According to San Diego
9 records, Apple's corporate office addresses include at least 12220 Scripps Summit
10 Dr, San Diego, CA 92131-3698.⁷

11 36. Apple has stated that it needs "hundreds of thousands of square feet" of
12 real estate in San Diego to accommodate its growing team in the area.⁸ As part of
13 Apple's explosive growth in San Diego, in 2022, Apple purchased a seven-building
14 research and development space of over 67 acres in the Rancho Vista Corporate
15 Center in San Diego for \$445 million.⁹ Apple stated it plans to hire 5,000 employees
16 in San Diego by 2026, and thousands of Apple employees already work in the San
17

million-for-vast-san-diego-expansion.

1 Diego area. Indeed, Apple decided in 2021 to decentralize and reduce its Cupertino
2 office, given the costs of the San Francisco Bay Area among other reasons, and to
3 instead focus its growth on the San Diego area among a handful of other select
4 locations, meaning, not only is San Diego critical to Apple today, but it will become
5 even more so in the future.¹⁰

6 37. Since 2019, Apple has been the employer of at least 653 recipients of
7 H-1B visas who work and reside in San Diego.¹¹ There were 339 recipients in 2022,
8 171 recipients in 2021, 89 recipients in 2020, and 54 recipients in 2019. The rapidly
9 increasing number of H-1B recipients aligns with Apple’s exponential growth in the
10 San Diego area.

11 38. Apple is currently advertising a staggering 498 jobs in San Diego.¹² A
12 focus of Apple’s San Diego offices is camera technology, the technology at issue in
13 this suit. At least 26 jobs that Apple currently is advertising relate to engineering
14 roles on camera technology.¹³

15 39. Apple has recently advertised jobs directly relevant to the accused
16 technology. For example, Apple recently advertised, and appears to have filled, jobs
17 directly relevant to the accused functionality, including one for a “Camera Tuning
18 & Image Quality Engineer” in “San Diego, CA” to work on “Portrait Mode” and
19 “image quality tuning of iOS cameras algorithms.”¹⁴

20 40. A number of Apple camera engineers directly working on accused
21 camera functionality appear to be located in the San Diego area and likely would
22

23 ¹⁰ [https://www.bloomberg.com/news/newsletters/2021-07-04/apple-hq-is-no-](https://www.bloomberg.com/news/newsletters/2021-07-04/apple-hq-is-no-longer-the-center-of-the-company-s-universe-kqpi2879)
24 [longer-the-center-of-the-company-s-universe-kqpi2879](https://www.bloomberg.com/news/newsletters/2021-07-04/apple-hq-is-no-longer-the-center-of-the-company-s-universe-kqpi2879).

25 ¹¹ [https://h1bdata.info/index.php?em=APPLE+INC&job=&city=SAN+DIEGO&ye-](https://h1bdata.info/index.php?em=APPLE+INC&job=&city=SAN+DIEGO&year=All+Years)
26 [ar=All+Years](https://h1bdata.info/index.php?em=APPLE+INC&job=&city=SAN+DIEGO&year=All+Years).

27 ¹² <https://jobs.apple.com/en-us/search?location=san-diego-SDO>.

28 ¹³ [https://jobs.apple.com/en-us/search?search=camera&sort=relevance&location=](https://jobs.apple.com/en-us/search?search=camera&sort=relevance&location=san-diego-SDO)
[san-diego-SDO](https://jobs.apple.com/en-us/search?search=camera&sort=relevance&location=san-diego-SDO).

¹⁴ <https://www.linkedin.com/jobs/view/2989630741/>.

1 have relevant information for this lawsuit. For example, Yixuan Wang, Apple’s
2 Camera Tuning and Image Quality Engineering Manager, who formerly worked in
3 Apple’s Cupertino offices, appears to have re-located to San Diego in 2022 and is
4 “Hiring in San Diego!”¹⁵ Her LinkedIn profile recently posted about the
5 “extraordinary work happening in our San Diego location,” presumably related to
6 the development of the accused camera functionality and products that infringe Clear
7 Imaging’s patents, which is “just the beginning” for San Diego.¹⁶

8 41. Other relevant Apple camera engineers in San Diego appear to be
9 working directly on the accused camera technology, many of whom have been hired
10 by Apple away from Qualcomm’s camera development team as part of Apple’s rapid
11 growth in camera engineering in San Diego. To cite just a few examples, Majot
12 Singh Bilkhu, who formerly worked at Qualcomm on its “Camera Systems for
13 Snapdragon,” now works at Apple in San Diego on camera technology, including
14 “Deep Learning R&D for Semantic Segmentation” and Pichaya Lertvilai is a
15 “Camera Hardware Engineer” in San Diego.”¹⁷ Sean Chang, who also worked on
16 image quality at Qualcomm for over a decade, was recently hired in early 2023 by
17 Apple as a “Camera tuning engineer” in San Diego to work on “camera image
18 quality.” These individuals likely have relevant knowledge as to Apple’s infringing
19 functionality, as well as relevant facts regarding the validity of the patents-in-suit,
20 including its non-obviousness and the fact that the inventions were anything but
21 routine, common, and conventional at the time of invention, because these
22 individuals have long-histories of working in the field of camera image and video
23 stabilization at both Qualcomm and Apple, two leading suppliers of this technology.

24
25
26 ¹⁵ <https://www.linkedin.com/in/yixuan-wang-a79448b8>.

27 ¹⁶ <https://www.linkedin.com/in/yixuan-wang-a79448b8>.

28 ¹⁷ <https://www.linkedin.com/in/plertvilai>.

<https://www.linkedin.com/in/manjotms10>.

1 42. Apple has also litigated in San Diego, taking advantage of the forum
2 for Apple’s own offensive patent litigations as well as defensive patent litigations.
3 For example, Apple sued Qualcomm and Motorola Mobility LLC for patent
4 infringement in this District in 2017 and 2012, respectively.¹⁸ Apple also frequently
5 seeks to transfer patent cases into the Southern District of California, taking
6 advantage of the forum for its defensive patent litigations, repeatedly representing
7 to courts that the Southern District of California is convenient for Apple and an
8 appropriate place for Apple to litigate, including because California courts have
9 state-wide subpoena power over any witness in California under Fed. R. Civ. P.
10 45(c)(3)(A)(ii) and Cal. Civ. Proc. Code § 1989.¹⁹

11 **V. THE ASSERTED PATENTS**

12 43. On January 2, 2018, the United States Patent and Trademark Office
13 issued U.S. Patent No. 9,860,450 (“the ’450 patent”), entitled “Method and
14 Apparatus to Correct Digital Video to Counteract Effect of Camera Shake” after full
15 and fair examination. Plaintiff is the assignee of all rights, title, and interest in and
16 to the ’450 patent and possesses all rights of recovery under the ’450 patent,
17 including the right to recover damages for present, past, and future infringement.
18 The ’450 patent is valid and enforceable.

19 44. On January 1, 2019, the United States Patent and Trademark Office
20 issued U.S. Patent No. 10,171,740 (“the ’740 patent”), entitled “Method and
21 Apparatus to Correct Blur in All or Part of a Digital Image By Combining Plurality
22

23 ¹⁸ *Apple Inc. v. Qualcomm Inc.*, No. 3:17-cv-108 (S.D. Cal. Jan. 20, 2017); *Apple*
24 *Inc. v. Motorola Mobility, Inc.*, No. 3:12-cv-355 (S.D. Cal. Feb. 10, 2012).

25 ¹⁹ *See, e.g., Fastvo LLC v. Apple Inc. et al*, No. 3:16-cv-385, Dkt. 75 (S.D. Cal. Feb.
26 17, 2016) (transferring case from Eastern District of Texas); *see also Wi-LAN USA,*
27 *Inc. et al. v. Apple Inc.*, No. 3:13-cv-00798-DMS-BLM, Dkt. 39 (S.D. Cal. Feb. 20,
28 2013) (transferring case from Southern District of Florida based on Apple’s
argument that “SD Cal is clearly more convenient for Apple” and emphasizing that
California courts have state-wide subpoena power).

1 of Images,” after full and fair examination. Plaintiff is the assignee of all rights, title,
2 and interest in and to the ’740 patent and possesses all rights of recovery under the
3 ’740 patent, including the right to recover damages for present, past, and future
4 infringement. The ’740 patent is valid and enforceable.

5 45. On August 13, 2019, the United States Patent and Trademark Office
6 issued U.S. Patent No. 10,382,689 (“the ’689 patent”), entitled “Method and
7 Apparatus for Capturing Stabilized Video in an Imaging Device,” after full and fair
8 examination. Plaintiff is the assignee of all rights, title, and interest in and to the
9 ’689 patent and possesses all rights of recovery under the ’689 patent, including the
10 right to recover damages for present, past, and future infringement. The ’689 patent
11 is valid and enforceable.

12 46. On September 27, 2022, the United States Patent and Trademark Office
13 issued U.S. Patent No. 11,457,149 (“the ’149 patent”), entitled “Method and
14 Apparatus for Capturing Digital Video,” after full and fair examination. Plaintiff is
15 the assignee of all rights, title, and interest in and to the ’149 patent and possesses
16 all rights of recovery under the ’149 patent, including the right to recover damages
17 for present, past, and future infringement. The ’149 patent is valid and enforceable.

18 47. On November 1, 2022, the United States Patent and Trademark Office
19 issued U.S. Patent No. 11,490,015 (“the ’015 patent”), entitled “Method and
20 Apparatus for Capturing Digital Video,” after full and fair examination. Plaintiff is
21 the assignee of all rights, title, and interest in and to the ’015 patent and possesses
22 all rights of recovery under the ’015 patent, including the right to recover damages
23 for present, past, and future infringement. The ’015 patent is valid and enforceable.

24 48. On April 11, 2023, the United States Patent and Trademark Office
25 issued U.S. Patent No. 11,627,254 (“the ’254 patent”), entitled “Method and
26 Apparatus for Capturing Digital Video,” after full and fair examination. Plaintiff is
27 the assignee of all rights, title, and interest in and to the ’254 patent and possesses
28

1 all rights of recovery under the '254 patent, including the right to recover damages
2 for present, past, and future infringement. The '254 patent is valid and enforceable.

3 49. On April 11, 2023, the United States Patent and Trademark Office
4 issued U.S. Patent No. 11,627,391 (“the '391 patent”), entitled “Method and
5 Apparatus for Capturing Digital Video,” after full and fair examination. Plaintiff is
6 the assignee of all rights, title, and interest in and to the '391 patent and possesses
7 all rights of recovery under the '391 patent, including the right to recover damages
8 for present, past, and future infringement. The '391 patent is valid and enforceable.

9 50. The inventions of the patents-in-suit address technological problems
10 and provide technological solutions to issues that were not well-understood, routine,
11 or conventional at the time of the inventions. The patents' disclosures and claims
12 are drawn to solving specific, technical problems, as a person of ordinary skill in the
13 art reading the patents-in-suit and their claims would understand. Moreover, a
14 person of ordinary skill in the art would understand that the claimed subject matter
15 represents advancement in the technical fields of the patents-in-suit and provide
16 improvements over the prior art and inventive concepts. The claims do not preempt
17 all techniques for or approaches to accomplishing the same or a similar end to what
18 they recite, for example, including the prior art. The large amount of prior art cited
19 on the faces, none of which, as the Examiners found, discloses or render obvious the
20 claimed inventions further shows that the claims were not well-understood, routine,
21 or conventional at the time of the inventions.

22 51. The claimed inventions of the '740 and '149 patents resolve
23 technological problems related to reducing unwanted distortion or blur when
24 capturing images with a camera, and, further, to correcting a selected part or subject
25 of an image while another part or subject of the image is blurred compared to the
26 selected part or subject. *See, e.g.*, '740, abstract; 10:55-11:6; Col. 12:20-29. The
27 patents further teach that it may be desirable to make a designated subject in a field
28

1 of view clear and sharp whereas other parts of the image may be blurred. *Id.* The
2 patents further teach that it is desirable to have techniques that correct for distortion
3 in photographs without adding excessively to the price, robustness or weight of a
4 camera or other imaging device. '740, Col. 2:20-33. The patents further teach that
5 “[i]n the prior art, electro-mechanical devices for correcting image blur due to
6 camera motion are built into some high quality lenses” and “[t]hese devices seek to
7 compensate for the camera/lens movement by moving one or more of the lens
8 elements.” *Id.* However, adding such a device to a lens typically makes the lens
9 much more expensive, heavier and less sturdy, and can also compromise image
10 quality. *Id.* Because existing solutions did not provide effective correction of
11 unwanted distortion or blur, and at the same time provide an effective way for a
12 designated subject in a field of view to be clear and sharp whereas other parts of the
13 image may be blurred, particularly for devices that were light-weight and not
14 excessively expensive, a need existed for solutions that would better (*e.g.*, faster,
15 more accurately, less expensively, *etc.*) provide these features without adding
16 excessively to the price, compromising robustness, or increasing weight of the
17 imaging device. *Id.* The claimed inventions of the '740 and '149 patents provide
18 solutions that solve these problems.

19 52. The claims of the '740 and '149 patents do not merely recite the
20 performance of some business practice known from the precomputer world along
21 with the requirement to perform it on a computer. Instead, the claims of these patents
22 recite inventive concepts in digital image processing technology, and overcome
23 technical problems specifically arising in that realm. A person of ordinary skill in
24 the art reading these patents would understand that the patents' disclosure and claims
25 are drawn to solving a specific, technical problem. The claims do not preempt the
26 use of all techniques taught in the field. For example, they do not preempt the use
27 of the techniques taught in the prior art cited on the face of the patents or described
28

1 in the specification. Each claim of these patents recites a combination of elements
2 sufficient to ensure that the claim in practice amounts to significantly more than a
3 patent claiming an abstract idea.

4 53. The claimed inventions of the '450 and '689 patents resolve
5 technological problems related to reducing motion blur using a digital image
6 processing technique that can take advantage of measurements of motion of the
7 imaging device from motion sensors and present advantages over electro-
8 mechanical devices that compensate using only lens movement. *See, e.g.*, '450, Col.
9 2:6-30. The patents further teach that it is desirable to correct for distortion in
10 photographs without adding excessively to the price, compromising robustness or
11 increasing weight of a camera or other imaging device. *Id.* The patents further teach
12 that “[i]n the prior art, electro-mechanical devices for correcting image blur due to
13 camera motion are built into some high quality lenses” and “[t]hese devices seek to
14 compensate for the camera/lens movement by moving one or more of the lens
15 elements.” *Id.* However, adding such a device to a lens typically makes the lens
16 much more expensive, heavier and less sturdy, and can also compromise image
17 quality. *Id.* Because existing solutions did not provide effective correction of
18 unwanted distortion or blur, particularly for devices that were light-weight and not
19 excessively expensive, a need existed for solutions that would better (*e.g.*, faster,
20 more accurately, less expensively, *etc.*) provide such correction through without
21 adding excessively to the price, compromising robustness, or increasing weight of
22 the imaging device. *Id.* The claimed inventions of the '450 and '689 patents provide
23 solutions that solve this problem.

24 54. The claims of the '450 and '689 patents do not merely recite the
25 performance of some business practice known from the precomputer world along
26 with the requirement to perform it on a computer. Instead, the claims of the '450
27 and '689 patents recite one or more inventive concepts that are rooted in digital
28

1 image processing technology, and overcome technical problems specifically arising
2 in that realm. A person of ordinary skill in the art reading the '450 and '689 patents
3 would understand that the patents' disclosure and claims are drawn to solving a
4 specific, technical problem. The claims do not preempt the use of all techniques
5 taught in the field. For example, they do not preempt the use of the techniques taught
6 in the prior art cited on the face of the patents or described in the specification. Each
7 claim of the '450 and '689 patents recites a combination of elements sufficient to
8 ensure that the claim in practice amounts to significantly more than a patent claiming
9 an abstract idea.

10 55. The claims of the '254 patent resolve technological problems related to
11 reducing unwanted distortion or blur when capturing images with a camera.
12 Common problems that significantly degrade the quality of a photograph are the blur
13 that results from camera movement (or shaking) at the time the photograph is taken,
14 the blur that results when a portion of the image is moving, and equipment errors.
15 '254 patent at 1:43-2:45. Unwanted distortion or blur can be difficult to avoid,
16 especially when a slow shutter speed is used, such as in low light conditions, or when
17 a large depth of field is needed and the lens aperture is small. *Id.* At the time of
18 invention, commonly used techniques for increasing the sharpness of an image did
19 not really "correct" the blur that resulted, for example, from motion of a camera. *Id.*
20 at 2:25-28. In fact, data loss from these prior techniques could result in a less
21 accurate image than the original. *Id.* at 2:28-30. The patents further teach that "[i]n
22 the prior art, electro-mechanical devices for correcting image blur due to camera
23 motion are built into some high quality lenses" and "[t]hese devices seek to
24 compensate for the camera/lens movement by moving one or more of the lens
25 elements." *Id.* at 2:28-55. However, adding such a device to a lens typically makes
26 the lens much more expensive, heavier and less sturdy, and can also compromise
27 image quality. *Id.* at 2:38-41. Because existing solutions did not provide effective
28

1 correction of unwanted distortion or blur, particularly for devices that were light-
2 weight and not excessively expensive, a need existed for solution that would better
3 (*e.g.*, faster, more accurately, less expensively, *etc.*) correct unwanted distortion or
4 blur without adding excessively to the price, compromising robustness, or increasing
5 weight of the imaging device and without compromising image quality. *Id.* at 2:32-
6 45. The claimed inventions of the '254 patent provide solutions that solve these
7 problems. The '254 patent teaches, and claims in certain claims, particular
8 techniques, including, for example, determining an offset for each image in a
9 sequence of images and processing the sequence of images to calculate pixel values
10 for a corrected image by taking into account the offset calculated for the images.
11 *See, e.g., Id.* at 10:15-11:23; Fig. 11. The '254 patent also teaches, and claims in
12 certain claims, particular techniques, including, for example, determining a number
13 of images to be captured, and determine a shutter speed for the images to be captured,
14 receive a number of image captured by the image sensor using the shutter speed
15 determined, and process the sequence of images to calculate pixel values for a
16 corrected image based on pixel values in the sequence of images. *Id.* In addition,
17 the '254 patent teaches, and claims in certain claims, receiving sequence of images,
18 designated a subject and a background in the sequence of images, processing the
19 sequence of images to obtain a final image such that the designated subject in the
20 final image is blur free and the background in the final image is blurred. In addition,
21 the '254 patent teaches, and claims in certain claims, that motion information from
22 one or more motion sensors may be received and used to cause one or more image
23 sensor adjusters to move the image sensor inside the imaging apparatus based on the
24 motion information. *See, e.g., Id.* at 11:24-12:3; Fig. 12.

25 56. The claims of the '254 patent do not merely recite the performance of
26 some business practice known from the precomputer world along with the
27 requirement to perform it on a computer. Instead, the claims of the '254 patent recite
28

1 inventive concepts in digital image processing technology, and overcome technical
2 problems specifically arising in that realm. A person of ordinary skill in the art
3 reading the '254 patent would understand that the patents' disclosure and claims are
4 drawn to solving a specific, technical problem. The claims do not preempt the use
5 of all techniques taught in the field. For example, they do not preempt the use of the
6 techniques taught in the prior art cited on the face of the patents or described in the
7 specification. Each claim of the '254 patent recites a combination of elements
8 sufficient to ensure that the claim in practice amounts to significantly more than a
9 patent claiming an abstract idea.

10 57. The claimed inventions of the '015 and '391 patents resolve
11 technological problems related to reducing unwanted distortion or blur when
12 capturing images and video with a camera, and, further, to correcting a selected part
13 or subject of an image while another part or subject of the image is blurred compared
14 to the selected part or subject. *See, e.g.*, '015, abstract; Col. 11:24-12:52; 13:7-16.
15 The patents further teach that it may be desirable to make a designated subject in a
16 field of view clear and sharp whereas other parts of the image may be blurred. *Id.*
17 The patents further teach that it is desirable to have techniques that correct for
18 distortion in photographs without adding excessively to the price, robustness or
19 weight of a camera or other imaging device. *Id.* at 2:6-30. The patents further teach
20 that “[i]n the prior art, electro-mechanical devices for correcting image blur due to
21 camera motion are built into some high quality lenses” and “[t]hese devices seek to
22 compensate for the camera/lens movement by moving one or more of the lens
23 elements.” *Id.* However, adding such a device to a lens typically makes the lens
24 much more expensive, heavier and less sturdy, and can also compromise image
25 quality. *Id.* Because existing solutions did not provide effective correction of
26 unwanted distortion or blur, and at the same time provide an effective way for a
27 designated subject in a field of view to be clear and sharp whereas other parts of the
28

1 image may be blurred, particularly for devices that were light-weight and not
2 excessively expensive, a need existed for solutions that would better (*e.g.*, faster,
3 more accurately, less expensively, *etc.*) provide these features without adding
4 excessively to the price, compromising robustness, or increasing weight of the
5 imaging device. *Id.* The claimed inventions of the '015 and '391 patents provide
6 solutions that solve these problems.

7 58. The claims of the '015 and '391 patents do not merely recite the
8 performance of some business practice known from the precomputer world along
9 with the requirement to perform it on a computer. Instead, the claims of these patents
10 recite inventive concepts in digital image processing technology, and overcome
11 technical problems specifically arising in that realm. A person of ordinary skill in
12 the art reading these patents would understand that the patents' disclosure and claims
13 are drawn to solving a specific, technical problem. The claims do not preempt the
14 use of all techniques taught in the field. For example, they do not preempt the use
15 of the techniques taught in the prior art cited on the face of the patents or described
16 in the specification. Each claim of these patents recites a combination of elements
17 sufficient to ensure that the claim in practice amounts to significantly more than a
18 patent claiming an abstract idea.

19 59. Apple's own statements cited here and throughout this complaint
20 regarding accused products and functionalities provide further evidence that the
21 patented technologies were not well-understood, routine, or conventional at the time
22 of the invention. In all of the parties' discussions over the last six years, Apple also
23 never asserted that any of the patents-in-suit are well-understood, routine, or
24 conventional or are directed to an abstract idea.

25 60. When Apple released its Portrait Mode with iPhone 7 Plus in 2016, it
26 commented on what a "big breakthrough in photography" had been accomplished
27
28

1 by providing a way to provide an image with a subject that is clear and sharp while
2 the background is blurred in “something that goes in your pocket.”

3 61. For traditional point and shoot cameras, “you can change the focal
4 length to zoom in...and that works great when you have a large camera with a big
5 lens on it that can move in and out. That isn’t so great when the lens you want to
6 put in is something that goes in your pocket...[Portrait Mode on the iPhone was]
7 incredibly challenging and takes a lot of amazing invention. What the [Apple
8 engineers] have been doing is outstanding and is something that is a big
9 breakthrough in photography...[A photo with a clear subject and a beautiful
10 background is] illustrative of a great camera that often has a big sensor like a full-
11 frame sensor or a really big fast lens. And the quality of the background blur, that’s
12 what’s called Bokeh. And the higher the quality of Bokeh, usually the more
13 advanced the higher quality the lens and camera system. End result is the person is
14 almost popping off the screen. It feels 3-D. Our goal is to do something like this
15 using the 2 cameras in the iPhone 7 Plus. What the engineering team has been doing,
16 hardware and software working together, is truly remarkable...When we take a
17 picture...You use machine learning to recognize people and faces and then create a
18 depth map of that image from the two cameras and the software. Keep the people
19 in the front sharp and focused and apply a beautiful blur to the background. This is
20 a huge breakthrough in what can be done in smartphone photography...You select
21 ‘Portrait’ and it automatically jumps to using the telefoto lens.”²⁰ Apple’s comments
22 further show the novelty, non-obviousness, and inventive concept of Clear
23 Imaging’s patents, including the ’740, ’149, ’015, and ’391 patents, by recognizing
24 more than a decade later what the Clear Imaging patents already taught, including
25 that particular techniques in the digital domain can be used to create images and
26

27 ²⁰ <https://www.youtube.com/watch?v=7ICPvlyfR5o> (7:05-7:25, 9:22-9:40, and
28 10:15-11).

1 video on devices that previously were only attempted using a “large camera with a
2 big lens.” But, as the Clear Imaging patents teach, it is desirable to have techniques
3 on devices “without adding excessively to the price, robustness or weight of a
4 camera or other imaging device, or adversely affecting image quality.” ’015 patent,
5 Col. 2:41-44. Moreover, when Apple discussed in 2021 its new Cinematic Mode,
6 which is relevant to at least the ’740, ’149, ’015 and ’391 patents, Apple would call
7 this functionality “really awesome,” an “all-new” feature, and state that the “iPhone
8 13 and the iPhone 13 Pro are the only smartphones that can do this.”²¹ Apple’s own
9 statements to technology described in the Clear Imaging patents as
10 “groundbreaking,” exciting, *etc.*, more than a decade after Clear Imaging’s
11 inventions further shows that the claims of the Clear Imaging patents recite subject
12 matter that was far more than common, routine, or conventional at the time of
13 invention.

14 62. Likewise, Apple has made statements that show that Clear Imaging’s
15 ’450 and ’689 patent claims relate to a particular type of video stabilization
16 technology which is far more than common, routine, or conventional. For example,
17 when Apple itself applied for a video stabilization patent, Apple’s patent was
18 rejected based on the Clear Imaging patents. *See supra* Section I. Apple’s own
19 patents also recognize, again almost a decade later, what Dr. Ozluturk recognized
20 much earlier. For example, Apple filed a patent in 2012 stating that using on-board
21 positional sensors (accelerometers and/or gyrometers) to provide particular
22 compensation techniques for positional shifts in the digital domain were “novel
23 motion compensation techniques” in 2012 and provided solutions that were
24 otherwise “thought to be impossible from either computational and/or power
25 consumption standpoints”:
26
27

28 ²¹ <https://www.youtube.com/watch?v=EvGOIAkLSLw>.

1 Some video capture devices now include “on board motion sensors, i.e.,
2 positional sensors (e.g., accelerometers and/or gyrometers), which may
3 be used to assist in various device functions. For example, some
4 devices may use gyrometer data to aid in image stabilization by
5 appropriately adjusting the device's lens and/or sensor mechanism
6 before an image or frame is captured. Once captured, however, the
7 image is retained as part of the video sequence without substantial
8 modification. This approach is not, however, feasible for many devices
9 incorporating video capture capability. For example, at this time, it is
10 generally considered infeasible to provide movable lens mechanisms
11 and the like in such small form factor devices. Accordingly, there is a
12 need for techniques to reduce the effects of rolling shutter distortion
13 during image and video capture in devices utilizing CMOS or other
14 non-CCD image sensors. By employing appropriate perspective
15 transformations to captured image databased on timestamped
16 information gathered from positional sensors in communication with
17 the image capture device, more efficient image processing techniques
18 may be employed to reduce the effects of rolling shutter distortion. By
19 using novel motion compensation techniques, informed by hardware
20 motion sensors, such as positional sensors, in communication with an
21 image capture device, a robust rolling shutter reduction system may be
22 employed, even in situations where reliably reducing rolling shutter
23 distortion effects was *previously thought to be impossible from either*
24 *computational and/or power consumption standpoints.*²²

25 63. In addition, Sensor-Shift stabilization technology combined with other
26 techniques for generating an image in the digital domain from multiple images,
27

28 ²² U.S. Patent No. 8,913,140 at Col. 1:59-2:20.

1 which is relevant to the '254 patent was heralded by Apple and others as a
2 tremendous achievement, and far more than something that was routine, common,
3 and conventional technology, even as late as 2020. For example, Apple called
4 Sensor-Shift stabilization technology a “massive leap in camera design” and stated
5 that “Sensor-shift OIS – a technology introduced in iPhone 12 Pro Max and [is] not
6 found in any other smartphone.”²³ Third-parties also stated that “Sensor shift
7 stabilization is coming to all iPhone 13 models and it is the biggest innovation in
8 stabilization technology on phones in literally a decade.”²⁴

9 64. A person of ordinary skill in the art reading the patents-in-suit and their
10 claims would understand that the patent’s disclosure and claims are drawn to solving
11 a specific, technical problem arising in photography. Moreover, a person of ordinary
12 skill in the art would understand that the claimed subject matter presents
13 advancements in the field of digital image processing. The claims do not preempt
14 all types of digital image processing. For example, the claims do not preempt use of
15 the techniques taught in the prior art cited on the face of the patents-in-suit. In light
16 of the foregoing, a person of ordinary skill in the art would understand that the claims
17 of the patents-in-suit are directed to specific improvements for digital image
18 processing of images captured by a digital camera.

19 VI. CLAIMS FOR PATENT INFRINGEMENT

20 65. The allegations provided below are exemplary and without prejudice to
21 Plaintiff’s infringement contentions provided pursuant to the Court’s scheduling
22 order and local rules. Plaintiff’s claim construction contentions regarding the
23 meaning and scope of the claim terms will be provided under the Court’s scheduling
24 order and local rules. As detailed below, each element of at least one claim of each

26 ²³ <https://www.apple.com/newsroom/2021/09/apple-introduces-iphone-13-and-iphone-13-mini/>.

27 ²⁴ https://www.phonearena.com/news/What-is-sensor-shift-stabilization-vs-OIS_id133572.

1 of the patents-in-suit is literally present in the accused products.²⁵ To the extent that
2 any element is not literally present, each such element is present under the doctrine
3 of equivalents. Plaintiff's analysis below should not be taken as an admission that
4 the preamble for any claim is limiting. While publicly available information is cited
5 below, Plaintiff may rely on other forms of evidence to show infringement.

6 66. Identification of the accused products, and the full recital of asserted
7 claims, will be provided in plaintiff's infringement contentions pursuant to the
8 Court's scheduling order and local rules. Apple imports into the United States, uses,
9 makes, offers for sale, and sells in the United States the Accused Products and
10 infringes the asserted claims of the patents-in-suit.

11 67. For each patent-in-suit, Clear Imaging is entitled to pre-suit damages
12 for Apple's infringement which includes damages from at least the date of issuance
13 of each of the patents-in-suit, for a period of up to six years prior to the filing of the
14 suit, in accord with 35 U.S.C. § 286. Further, there is no failure under 35 U.S.C. §
15 287 that would limit or otherwise inhibit pre-suit damages. Clear Imaging is further
16 entitled to post-suit damages for Apple's infringement after the filing of this lawsuit.
17 Plaintiff is entitled to damages under 35 U.S.C. § 284.

18 **COUNT I: PATENT INFRINGEMENT OF THE '450 PATENT**

19 68. Clear Imaging incorporates by reference the preceding paragraphs as if
20 fully stated herein.

21 69. Apple has been and is now directly infringing and/or indirectly
22 infringing the '450 patent by way of inducement, literally and/or under the Doctrine
23 of Equivalents, in violation of 35 U.S.C. § 271, including by making, using, selling,
24 and/or offering for sale in the United States or importing into the United States
25

26
27 ²⁵ Clear Imaging will provide a complete list of asserted claims with its infringement
28 contentions.

1 infringing products, including each of the '450 accused products.²⁶ Apple derives
2 revenue from the activities relating to the '450 accused products. As explained
3 below, these products are covered by at least one or more of the '450 patent asserted
4 claims, including, but not limited to, claim 14.

5 70. Claim 14 of the '450 patent recites an “imaging device” comprising “an
6 image sensor configured to capture a sequence of images, wherein the sequence of
7 images comprise a video, and store the images in a memory.”²⁷ The '450 accused
8 products include an image sensor configured to capture a sequence of images,
9 wherein the sequence of images comprise a video, and store the images in a memory.
10 For example, Apple’s website and industry websites show that the '450 accused
11 products include an image sensor and are configured to capture a sequence of images
12 comprising a video and store the images in a memory, as shown by the exemplary
13 evidence below.

23
24 ²⁶ The '450 accused products include at least each of the Accused iPhones, the iPad
25 Pro 11-inch (all generations), and iPad Pro 12.9 inch (at least 2nd generation and
26 later), iPad Air (at least 4th generation and later), iPad mini (at least 5th generation
and later), and iPad (at least 9th generation and later).

27 ²⁷ The Apple devices satisfy the preambles as noted throughout this complaint. Clear
28 Imaging reserves the right to assert that the preamble of any asserted claim of any
asserted patent is not limiting.

Apple Special Event 2014 - iPhone 6 & iPhone 6 Plus Introduction

“Here’s another great feature. Cinematic video stabilization... The person taking the [photo] is also riding on a bike and the video is automatically being stabilized. It’s really great.

<https://www.youtube.com/watch?v=0T2HCbv9FBQ>

Capture steadier video with Action mode

With Action mode on iPhone 14 and iPhone 14 Pro models, you can capture smooth hand-held video even when you’re moving around a lot.

1. Open the Camera app and swipe to Video mode.
2. Tap the  button to turn on Action mode.
3. Tap the Shutter button and record your video.

Action mode works best with lots of light, and the Camera will show "More light required" if things are too dark. You can change your settings to use Action mode in lower light.

1. In the Settings app, tap Camera.
2. Tap Record Video.
3. Turn on Action Mode Lower Light.

Action mode can capture video at either 1080p or 2.8k resolution up to 60 frames per second. It supports Dolby Vision HDR or, on iPhone 14 Pro models, Apple ProRes video formats.

Apple - September Event 2016

https://www.youtube.com/watch?v=NS0txu_Kzl8&t=482s

Step 1 iPhone 7 Teardown

- Let's get into this iPhone 7! Before diving in, here are the tech specs:
 - Apple A10 Fusion processor with embedded M10 motion coprocessor
 - 32, 128, or 256 GB onboard storage capacity
 - 4.7-inch IPS multitouch Retina HD display with 1334 x 750 pixels (326 ppi)
 - 12 MP camera with f/1.8 aperture, optical image stabilization, and 5x digital zoom
 - 7 MP FaceTime HD camera with f/2.2 aperture and 1080p HD recording capability
 - Non-mechanical Touch ID home button driven by new Taptic Engine
 - 802.11a/b/g/n/ac Wi-Fi + MIMO Bluetooth 4.2 + NFC

<https://www.ifixit.com/Teardown/iPhone+7+Teardown/67382>

20
21
22
23
24
25

The left and right sides of the sensor get cropped. The iPhone 6 and 6 Plus share the same 8-megapixel image sensor, and the new iPhone 6s and 6s Plus both use a 12-megapixel image sensor. The extra resolution is required for 4K video—in the case of the iPhone's 4K capture mode, the top and bottom of the frame are cut off, as opposed to the S6 which uses its entire sensor to capture 4K footage. The iPhone 6's video recording tops out at 1080p.

Apple - September Event 2016

https://www.youtube.com/watch?v=NS0txu_Kzl8&t=482s

4:35-4:45 “Live photos...Now we apply video image stabilization when you take a live photo...”

<https://www.youtube.com/watch?v=7ICPvlyfR5o>

71. Claim 14 of the '450 patent recites an “imaging device” comprising “one or more motion sensors configured to detect motion information for one or more images of the sequence of images, wherein the motion information represents motion of the imaging device during capturing of the one or more images of the sequence of images, and store the motion information in the memory synchronously with the storing of the one or more images.” The '450 accused products include one or more motion sensors configured to detect motion information for one or more images of the sequence of images, wherein the motion information represents motion of the imaging device during capturing of the one or more images of the sequence of images, and store the motion information in the memory synchronously with the storing of the one or more images. For example, Apple’s website and industry websites indicate that Apple’s devices, including those equipped with video stabilization (including Cinematic Video Stabilization, Action Mode, and/or Video Image Stabilization),²⁸ include motion sensors configured to detect motion

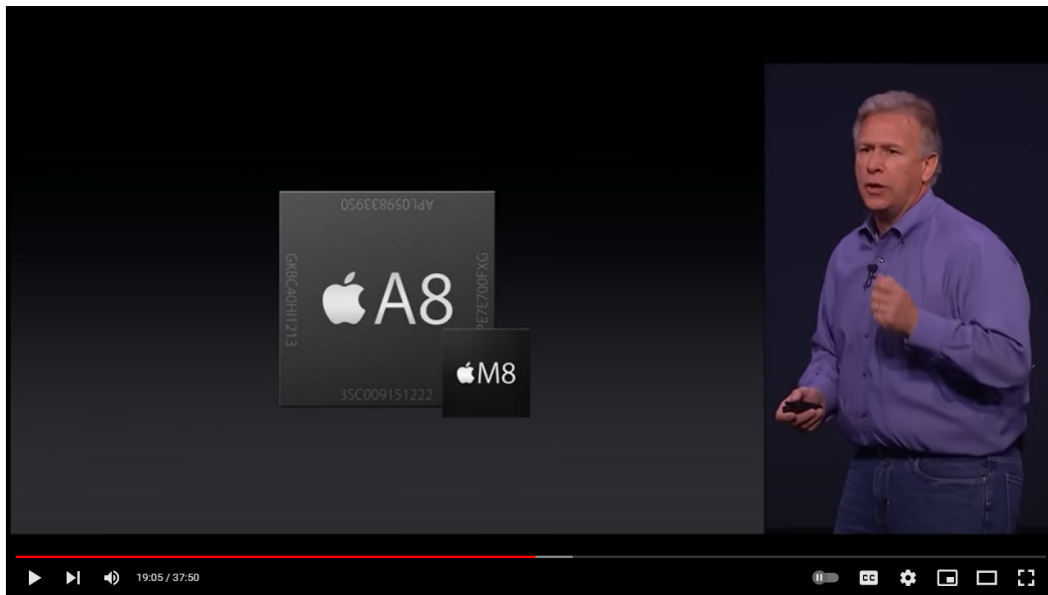

²⁸ To the extent Slo-Mo Mode, Time-Lapse Stabilization, and Live Photos use Apple’s video stabilization (including Cinematic Video Stabilization and/or Video

1 information for one or more images of the sequence of images and further that
2 Apple’s devices are configured to store the motion information synchronously with
3 the storing of the one or more images.

4 **Sensors**

- 5 ▪ Touch ID
- 6 ▪ Barometer
- 7 ▪ Three-axis gyro
- 8 ▪ Accelerometer
- 9 ▪ Proximity sensor
- 10 ▪ Ambient light sensor

11 https://support.apple.com/kb/SP705?locale=en_US (iPhone 6).

12 Apple Special Event 2014 - iPhone 6 & iPhone 6 Plus Introduction

13 “Along with the A8 is our motion coprocessor, a new generation M8. As you know
14 this motion coprocessor works along with offloading the work from your processor
15 with all those *great sensors on your phone, the accelerometer, the gyroscope, the*
16 *compass...*”

17 <https://www.youtube.com/watch?v=0T2HCbv9FBQ> (at 19:00-19:40)²⁹

18
19
20
21
22
23
24
25 Image Stabilization) or similar gyro-based video stabilization technology that
26 determines or calculates shifts, they are also accused features for the ’450 and ’689
27 patents.

28 ²⁹ See also Apple U.S. Patent No. 8,913,140 (“Rolling Shutter Reduction Based on Motion Sensors”), Col. 1:59-2:20; 16:37-57, Claim 30, Figs. 11A and 11B.

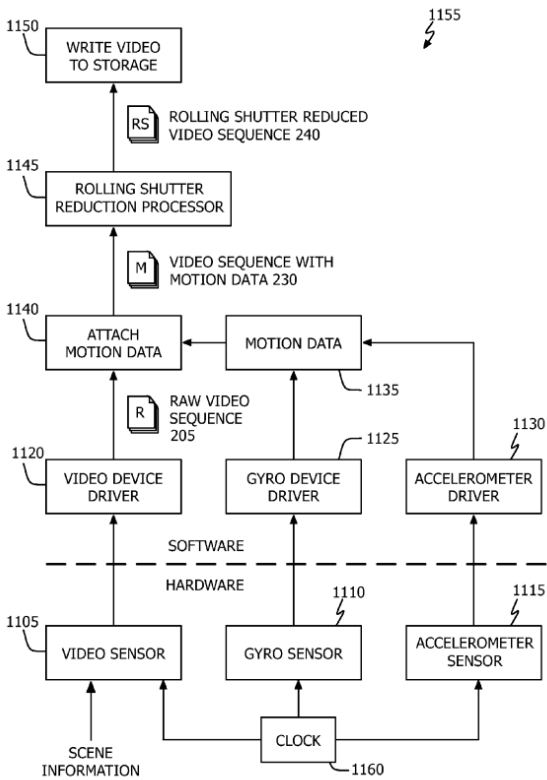

FIG. 11B 30

Software Stabilization Intended For A Positive Reason?

As we have mentioned before, the software stabilization in iPhone 6 Plus does not fail to reflect an above average outcome. Considering Apple did not enable OIS for video recording, the cinematic video stabilization does its job by a software algorithm. This is the reason the video quality and stabilization differs from viewing it live and then afterwards once you're done.

“iPhone 6 Plus Uses OIS For Images and Software Stabilization For Videos”

<https://wccftech.com/iphone-6-ois-images-software-stabilization-videos/>

72. Claim 14 of the '450 patent recites an “imaging device” comprising “a processor configured to determine a vertical shift value and a horizontal shift value for one or more images of the sequence of images based at least in part on the motion information” and “modify one or more images of the sequence of images based at least in part on the vertical and the horizontal shift values.” The '450 accused

³⁰ Apple U.S. Patent No. 8,913,140 (“Rolling Shutter Reduction Based on Motion Sensors”), Fig. 11B.

1 products include a processor configured to determine a vertical shift value and a
2 horizontal shift value for one or more images of the sequence of images based at
3 least in part on the motion information and modify one or more images of the
4 sequence of images based at least in part on the vertical and horizontal shift values.
5 For example, Apple’s website and industry websites indicate that Apple’s devices,
6 including those equipped with video stabilization (including Cinematic Video
7 Stabilization, Action Mode, and/or Video Image Stabilization), are configured to
8 compensate for vertical shift and horizontal shift detected by motion sensors using
9 motion information stored synchronously with the storing of one or more images, as
10 shown by the evidence cited in the preceding paragraphs. The analysis of Apple’s
11 software images for the iPhone which indicates that the AVFoundation Framework
12 includes “GyroVideoStabilization” functionality. Further, Apple’s CoreMotion
13 gyro/accelerometer framework provides metadata as an input to Apple’s audio/video
14 capture framework.³¹ Therefore, on information and belief, motion information is
15 used as part of Apple’s digital video stabilization functionality to compensate for
16 vertical shift and horizontal shift detected by motion sensors.

17 73. Claim 14 of the ’450 patent recites an “imaging device” comprising a
18 processor configured to “combine the modified images to obtain a final video” and
19 “wherein the memory is further configured to store the final video.” The ’450
20 accused products include a processor configured to combine the modified images to
21 obtain a final video. For example, Apple’s website and industry websites explain
22 that Apple’s devices include a processor configured to combine the modified images
23 to obtain a final video and a memory to store the final video, as shown, for example,
24 by the evidence cited in the preceding paragraphs and below.

25
26
27 ³¹ See, e.g.,
28 <https://developer.limneos.net/index.php?ios=12.1&framework=AVFoundation.framework&header=AVCaptureCoreMotionMetadataInput.h>.

Video

When you go to any video mode, the shutter button turns from white to red. Tap the shutter once to start recording, then tap it again to stop. While you [record your video](#), you can hit the white shutter button to take a still photo.

Want to [edit the length of your video](#)? Tap Edit or the edit button , then move the slider to adjust the start and stop times. Tap Done to save your changes.

<https://support.apple.com/en-ph/HT207260>

Record videos with your iPhone camera

Use Camera  to record videos and QuickTake videos on your iPhone. Learn how to change modes to take Cinematic, slow-motion, and time-lapse videos.

Note: For your privacy, a green dot appears in the top-right corner of the screen when Camera is in use. See [Control access to hardware features on iPhone](#).

Record a video

1. Open Camera, then select [Video mode](#).
2. Tap the Record button or press either volume button to start recording. While recording, you can do the following:
 - Press the white Shutter button to snap a still photo.
 - Pinch the screen to zoom in and out.
 - For a more precise zoom on [models with Dual and Triple camera systems](#), touch and hold 1x, then drag the slider to the left.
3. Tap the Record button or press either volume button to stop recording.

By default, video records at 30 frames per second (fps). Depending on your model, you can choose other frame rates and video resolution settings in Settings  > Camera > Record Video. Faster frame rates and higher resolutions result in larger video files.

<https://support.apple.com/guide/iphone/record-videos-iph61f49e4bb/16.0/ios/16.0#iph91b7bd2a7>

74. As described above, Apple has had actual knowledge of the '450 patent, including through claim charts and other information provided by Clear Imaging, and actual knowledge that its activities constitute direct and/or indirect infringement of the '450 patent, yet they have not ceased their infringing activities. See Section III. Apple's infringement of the '450 patent has been and continues to be willful and deliberate. Apple also has knowledge of the '450 patent by way of this complaint

1 and, to the extent they do not cease their infringing activities, their infringement is
2 and continues to be willful and deliberate.

3 75. Apple actively, knowingly, and intentionally induces infringement of
4 one or more claims of the '450 patent under 35 U.S.C. § 271(b) by actively
5 encouraging others to make, use, offer to sell, sell, and/or import '450 accused
6 products in this judicial district and elsewhere in the United States. For example,
7 Apple actively instructs, promotes, and encourages the use of the infringing features
8 in marketing materials, technical specifications, data sheets, web pages on its
9 website (e.g., www.apple.com), press releases, and user manuals, as well as at trade
10 shows (e.g., annual Apple WWDC events) and through its sales and distribution
11 channels that encourage infringing use, sales, offers to sell, and importation of the
12 '450 accused products, as evidenced at least in part by the Apple statements and
13 documents cited in this complaint. Apple user manuals for the '450 accused
14 products instruct, promote, and encourage the use of the camera capability in an
15 infringing manner. In addition, Apple documents and materials for the '450 accused
16 products instruct, promote, and encourage use of video stabilization (including
17 Cinematic Video Stabilization, Action Mode, and/or Video Image Stabilization).

18 76. Apple, by way of its infringing activities, has caused and continues to
19 cause Plaintiff to suffer damages, the exact amount to be determined at trial.

20 **COUNT II: PATENT INFRINGEMENT OF THE '740 PATENT**

21 77. Clear Imaging incorporates by reference the preceding paragraphs as if
22 fully stated herein.

23 78. Apple has been and is now directly infringing and/or indirectly
24 infringing the '740 patent by way of inducement, literally and/or under the Doctrine
25 of Equivalents, in violation of 35 U.S.C. § 271, including by making, using, selling,
26 and/or offering for sale in the United States or importing into the United States the
27
28

1 '740 accused products.³² Apple derives revenue from the activities relating to the
2 '740 accused products. As explained below, these products are covered by at least
3 one or more of the '740 patent asserted claims, including, but not limited to, claim
4 20.

5 79. Claim 20 of the '740 patent recites an “imaging device for capturing
6 and processing images” comprising “a user interface configured to display an image,
7 wherein the image is a preview of the field of view of the device, and wherein the
8 image includes a first subject and a second subject” and “a processor configured to
9 receive user input designating the first subject in the image to be kept blur free.”
10 The '740 accused products include a user interface configured to display an image,
11 wherein the image is a preview of the field of view of the device, and wherein the
12 image includes a first and second subject. For example, Apple’s website shows that
13 the display screen is used as a user interface configured to display an image and to
14 receive a user input that designates a first subject in the image to be kept blur free,
15 as shown in the examples below. The image may also have a second subject as
16 shown below.

17
18
19
20
21
22
23
24
25 ³² On information and belief, Portrait Mode was released with the iPhone 7 Plus and
26 not included in the iPhone 6 models, the iPhone 7, or the iPad Pro 12.9 inch (2nd
27 generation). Under that understanding, the iPhone 6 models, the iPhone 7, and iPad
28 Pro 12.9 inch (2nd generation) are not '740 accused products. On information, all
other Accused Products, including all other Accused iPhones and all other Accused
iPads, are infringing and are '740 accused products.

Portrait

Portrait mode creates a depth-of-field effect that keeps your subject sharp while blurring the background. You can use Portrait mode on iPhone 7 Plus, iPhone 8 Plus, and later. If you have an iPhone X or later, you can also take a selfie in Portrait mode. You can also use Portrait Mode with the front-facing camera on iPad Pro 11-inch (all generations) and iPad Pro 12.9-inch (3rd generation and later).

To use Portrait mode, open the Camera app and swipe to Portrait mode. Move farther away from your subject if the app suggests it. When the Depth Effect box turns yellow, take the picture.

With iPhone X and later, and iPhone 8 Plus, you can make your Portrait mode images even more captivating with studio-quality lighting effects. After you take your photo, tap Edit and choose from Studio Light, Contour Light, Stage Light, or Stage Light Mono. And with iPhone XS and later, you can create a beautiful, classic look with High-Key Light Mono.

On iPhone XR, the Stage Light, Stage Light Mono, and High-Key Light Mono effects aren't available with the rear-facing camera.

<https://support.apple.com/en-us/HT207260>

Take Portrait mode photos with your iPhone camera

With Camera  on [models that support Portrait mode](#), you can apply a depth-of-field effect that keeps your subject—people, pets, objects, and more—sharp while creating a beautifully blurred foreground and background. You can apply and adjust different lighting effects to your Portrait mode photos, and on iPhone X and later, you can even take a selfie in Portrait mode.

Take a photo in Portrait mode

On iPhone 8 Plus, iPhone X, and later, you can apply studio-quality lighting effects to your Portrait mode photos.

1 With Portrait mode, the camera creates a depth-of-field effect. This lets you capture
2 photos with a sharp focus on the subject and a blurred background.

3 Take photos in Portrait mode

- 4 1. Open the Camera app and swipe to Portrait mode.
- 5 2. Follow the tips on your screen. When Portrait mode is ready, the name of the lighting effect, such as
6 Natural Light, turns yellow.

- 7 3. Tap the Shutter button .

8 The Camera app lets you know when you're too close, too far away, or if the area is too dark. You can also
9 use True Tone flash, set a timer, and apply filters. After you take a photo, you can [use the built-in editing](#)
10 [features](#) to do things like crop and auto-enhance.

11 Some iPhone models have multiple options for Portrait mode, like 1x or 2x. Just tap the 1x or 2x button to
12 switch between the options. With iPhone XR and iPhone SE (2nd generation), the rear-facing camera must
13 detect a person's face to take a Portrait mode photo.

14 Portrait mode is available on iPhone SE (2nd generation) and later, iPhone X and later, as well as iPhone 7 Plus and iPhone 8
15 Plus.

16 <https://support.apple.com/en-us/HT208118>

Step 1 iPhone 7 Plus Teardown

- There's a lot to learn about what's hidden inside the "best, most advanced iPhone ever"—but first, let's take a moment to review what we already know:
 - Apple A10 Fusion processor with embedded M10 motion coprocessor
 - 32, 128, and 256 GB onboard storage capacity (jet black model not available in 32 GB)
 - 5.5-inch multitouch IPS Retina HD display with 1920 × 1080 pixels (401 ppi)
 - Dual 12 MP wide-angle and telephoto cameras with *f*/1.8 and *f*/2.8 apertures (respectively), 2x optical zoom, and 10x digital zoom
 - 7 MP FaceTime HD camera with *f*/2.2 aperture and 1080p HD recording capability
 - Solid-state Home button with Touch ID, driven by new Taptic Engine
 - 802.11a/b/g/n/ac Wi-Fi + MIMO Bluetooth 4.2 + NFC

<https://www.ifixit.com/Teardown/iPhone+7+Plus+Teardown/67384>

Apple - September Event 2016

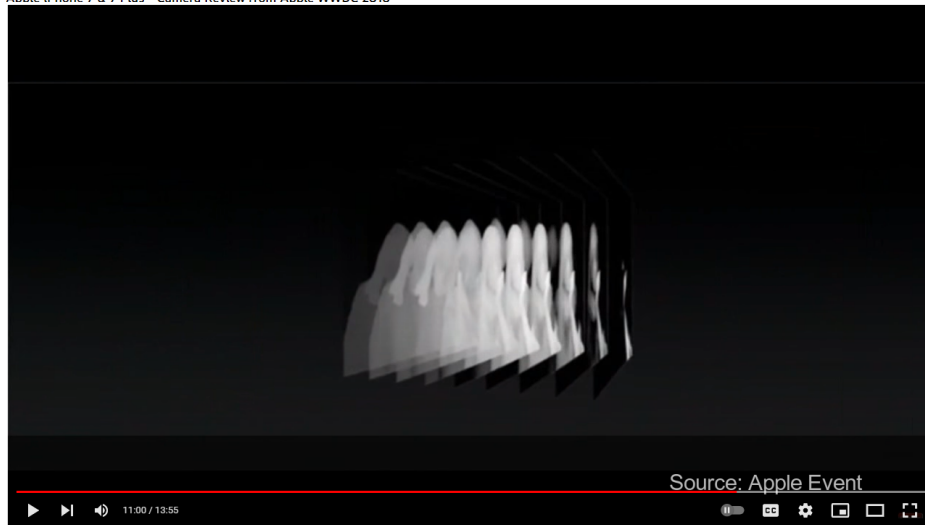

https://www.youtube.com/watch?v=NS0txu_Kzl8&t=482s

80. Claim 20 of the '740 patent recites an "imaging device" comprising "a memory configured to store a plurality of images captured by the device, wherein the plurality of images include the first subject and the second subject." The '740 accused products include a memory configured to store a plurality of images captured by the device, wherein the plurality of images include the first subject and the second subject. For example, Apple's website and industry websites explain that Apple's accused products capture a plurality of images including a first subject and a second subject, including through the use of Portrait Mode (including with stand-

1 alone pictures and Portrait Mode with FaceTime) and Cinematic Mode, as shown in
2 the examples below.

11 Apple iPhone 7 & 7 Plus - Camera Review from Apple WWDC 2016

21 A photo with a clear subject and a beautiful background is “illustrative of a great
22 camera that often has a big sensor like a full-frame sensor or a really big fast lens.
23 And the quality of the background blur, that’s what’s called Bokeh. And the higher
24 the quality of Bokeh, usually the more advanced the higher quality the lens and
25 camera system. End result is the person is almost popping off the screen. It feels 3-
26 **D. Our goal is to do something like this using the 2 cameras in the iPhone 7**
27 **Plus. What the engineering team has been doing, hardware and software working**
28 **together, is truly remarkable...When we take a picture...You use machine**
learning to recognize people and faces and then create a depth map of that
image from the two cameras and the software. Keep the people in the front
sharp and focused and apply a beautiful blur to the background. This is a huge
breakthrough in what can be done in smartphone photography...You select

1 “Portrait” and it automatically jumps to using the telefoto lens.

2 WWDC2016 at 10:15-11:00

3 <https://www.youtube.com/watch?v=7ICPvlyfR5o>

4 81. Claim 20 of the '740 patent recites an “imaging device” comprising a
5 “processor further configured to combine the plurality of images to obtain a
6 combined image, such that: the combined image includes the first subject and the
7 second subject, the first subject in the combined image is blur free, and the second
8 subject in the combined image is blurred compared to the first subject.” The '740
9 accused products include a processor configured to combine the plurality of images
10 to obtain a combined image. For example, Apple’s website and industry websites
11 explain that the '740 accused products, including through Portrait Mode (including
12 with stand-alone pictures and Portrait Mode with FaceTime) and Cinematic Mode,
13 create a combined image where a first subject in the combined image is blur free and
14 a second subject in the combined image is blurred compared to the first subject, as
15 shown in the examples below.

24 [https://web.archive.org/web/20181108231600/https://www.apple.com/iphone-](https://web.archive.org/web/20181108231600/https://www.apple.com/iphone-xr/cameras/)
25 [xr/cameras/](https://web.archive.org/web/20181108231600/https://www.apple.com/iphone-xr/cameras/)

9 [https://web.archive.org/web/20181108231600/https://www.apple.com/iphone-](https://web.archive.org/web/20181108231600/https://www.apple.com/iphone-xr/cameras/)
10 [xr/cameras/](https://web.archive.org/web/20181108231600/https://www.apple.com/iphone-xr/cameras/)

11 “And the second marquee feature is, of course, the Portrait mode, **where the dual**
12 **camera system locks into the tele camera's narrower field of view, but then uses**
13 **images from both the wide and the tele to generate a beautiful shallow depth of**
14 **field effect that you'd expect from a much more expensive camera with a fast,**
15 **wide-open lens.** The foreground is sharply in focus, while the background is
16 progressively blurred in these pleasing little bouquet circles. The depth effect has
gotten even better in iOS 11. We've made improvements to the rendering of the out-
of-focus area.”

17 “When **camera one and camera two's images are compared, remember, they**
18 **line up by optical center and look for features matching key points.** Let's say
19 it's dark out and the observed point may not have very well-defined features
20 anymore, the color is a little bit noisy, the edges are hard to find. Another example
21 would be if you point the cameras at a flax, white wall with no texture to it, there are
22 no features so it's very hard to find differences in matching. For any of these reasons
you might have areas in your image where there is no disparity, and those are called
holes.”

23 Transcript of WWDC 2017 Presentation Capturing Depth in iPhone Photography³³
24

25 ³³ See also Apple WWDC 2017 transcript (“On the most requested developer feature
26 for the dual camera, and that's dual photo capture. What do I mean by this. So far,
27 when you use the dual camera and take a picture, you still just get one image. It's
28 either from the wide or it's from the tele, depending where you're zoomed, or if
you're in the area between one and 2X you might get portions of both as we do some

1 [https://web.archive.org/web/20171125053238/https://developer.apple.com/videos/
2 play/wwdc2017/507/](https://web.archive.org/web/20171125053238/https://developer.apple.com/videos/play/wwdc2017/507/)

9
10
11 <https://web.archive.org/web/20161018181153/https://www.apple.com/iphone-7/>³⁴

12 82. Claim 20 of the '740 patent recites an “imaging device” comprising a
13 “user interface further configured to display the combined image.” The '740
14 accused products include a user interface further configured to display the combined
15 image. For example, Apple’s website and industry websites explain that Apple’s
16 devices include a user interface configured to display the combined image, as shown
17 in the examples below.

18
19
20
21
22
23 blending to make an even nicer picture, but you still only get one.”)
24 [http://web.archive.org/web/20220122231207/https://developer.apple.com/videos/pl
25 ay/wwdc2017/507/](http://web.archive.org/web/20220122231207/https://developer.apple.com/videos/play/wwdc2017/507/).

26 ³⁴ On information and belief, Apple’s cameras with Portrait Mode may also use
27 digital image stabilization (including Deep Fusion or Auto-Image Stabilization)
28 which combines multiple images and provides additional acts relevant to
infringement of the '740 and '149 patents. Digital image stabilization is discussed
in more detail in the context of the '254 patent.

Take a photo in Portrait mode

On iPhone 8 Plus, iPhone X, and later, you can apply studio-quality lighting effects to your Portrait mode photos.

1. Open Camera, then select [Portrait mode](#).
2. Follow the tips onscreen to frame your subject in the yellow portrait box.

<https://support.apple.com/guide/iphone/take-portrait-mode-photos-iph7d3a91a2/ios#:~:text=1%20Open%20Camera%2C%20then%20select%20Portrait%20mode.%202, Tap%20the%20Shutter%20button%20to%20take%20the%20shot.>

83. Claim 20 of the '740 patent recites an “imaging device” comprising “a memory configured to store the combined image.” The '740 accused products include a memory configured to store the combined image. For example, Apple’s website shows that the combined image can be saved to memory, as shown by the evidence in the preceding paragraphs and below.

Step 1 iPhone 7 Plus Teardown

Edit

- There's a lot to learn about what's hidden inside the "best, most advanced iPhone ever"—but first, let's take a moment to review what we already know:
 - Apple A10 Fusion processor with embedded M10 motion coprocessor
 - 32, 128, and 256 GB onboard storage capacity (jet black model not available in 32 GB)
 - 5.5-inch multitouch IPS Retina HD display with 1920 x 1080 pixels (401 ppi)
 - Dual 12 MP wide-angle and telephoto cameras with *f*/1.8 and *f*/2.8 apertures (respectively), 2x optical zoom, and 10x digital zoom
 - 7 MP FaceTime HD camera with *f*/2.2 aperture and 1080p HD recording capability
 - Solid-state Home button with Touch ID, driven by new Taptic Engine
 - 802.11a/b/g/n/ac Wi-Fi + MIMO Bluetooth 4.2 + NFC

84. As described above, Apple has had actual knowledge of the '740 patent, including through claim charts and other information provided by Clear Imaging, and actual knowledge that its activities constitute direct and/or indirect infringement of the '740 patent, yet they have not ceased their infringing activities. See Section

1 III. Apple's infringement of the '740 patent has been and continues to be willful and
2 deliberate. Apple also has knowledge of the '740 patent by way of this complaint
3 and, to the extent they do not cease their infringing activities, their infringement is
4 and continues to be willful and deliberate.

5 85. Apple actively, knowingly, and intentionally induces infringement of
6 one or more claims of the '740 patent under 35 U.S.C. § 271(b) by actively
7 encouraging others to make, use, offer to sell, sell, and/or import '740 accused
8 products in this judicial district and elsewhere in the United States. For example,
9 Apple actively instructs, promotes, and encourages the use of the infringing features
10 in marketing materials, technical specifications, data sheets, web pages on its
11 website (e.g., www.apple.com), press releases, and user manuals, as well as at trade
12 shows (e.g., annual Apple WWDC events) and through its sales and distribution
13 channels that encourage infringing use, sales, offers to sell, and importation of the
14 '740 accused products, as evidenced at least in part by the Apple statements and
15 documents cited in this complaint. Apple user manuals for the '740 accused
16 products instruct, promote, and encourage the use of the camera capability in an
17 infringing manner. In addition, Apple documents and materials for the '740 accused
18 products instruct, promote, and encourage use of Portrait Mode (including with
19 stand-alone pictures and Portrait Mode with FaceTime) and Cinematic Mode.

20 86. Apple, by way of its infringing activities, has caused and continues to
21 cause Plaintiff to suffer damages, the exact amount to be determined at trial.

22 **COUNT III: PATENT INFRINGEMENT OF THE '689 PATENT**

23 87. Clear Imaging incorporates by reference the preceding paragraphs as if
24 fully stated herein.

25 88. Apple has been and is now directly infringing and/or indirectly
26 infringing the '689 patent by way of inducement, literally and/or under the Doctrine
27 of Equivalents, in violation of 35 U.S.C. § 271, including by making, using, selling,
28

1 and/or offering for sale in the United States or importing into the United States
2 infringing products, including each of the '689 accused products. Apple derives
3 revenue from the activities relating to the '689 accused products.³⁵ As explained
4 below, these products are covered by at least one or more of the '689 patent asserted
5 claims, including, but not limited to, claim 1.

6 89. Claim 1 of the '689 patent recites an “imaging apparatus for capturing
7 stabilized digital video” comprising “a user interface for displaying a preview of the
8 field of view of the imaging apparatus and to receive user input,” “an image sensor
9 for capturing digital video data for a video, wherein the video comprises a sequence
10 of images,” “one or more motion sensors for detecting motion of the apparatus
11 during capturing of the video data and generating motion data representing the
12 motion of the apparatus.” The '689 accused products include a user interface, an
13 image sensor configured to capture a sequence of images, wherein the sequence of
14 images comprise a video, and motion sensors. For example, Apple’s website and
15 industry websites show that the '689 accused products are configured to capture a
16 sequence of images comprising a video and include these components.

24 Apple Special Event 2014 - iPhone 6 & iPhone 6 Plus Introduction

25
26
27
28 ³⁵ The '689 accused products are the same as the '450 accused products.

1 “Here’s another great feature. Cinematic video stabilization...The person taking the
2 [photo] is also riding on a bike and the video is automatically being stabilized. It’s
3 really great.

4 <https://www.youtube.com/watch?v=0T2HCbv9FBQ>

Capture steadier video with Action mode

5 With Action mode on iPhone 14 and iPhone 14 Pro models, you can capture smooth hand-held video even when you’re moving around a lot.

- 6 1. Open the Camera app and swipe to Video mode.
- 7 2. Tap the button to turn on Action mode.
- 8 3. Tap the Shutter button and record your video.

9 Action mode works best with lots of light, and the Camera will show "More light required" if things are too dark. You can change your settings to use Action mode in lower light.

- 10 1. In the Settings app, tap Camera.
- 11 2. Tap Record Video.
- 12 3. Turn on Action Mode Lower Light.

13 Action mode can capture video at either 1080p or 2.8k resolution up to 60 frames per second. It supports Dolby Vision HDR or, on iPhone 14 Pro models, Apple ProRes video formats.

14 <https://support.apple.com/en-us/HT210571>

15 Step 1 iPhone 7 Teardown

Edit

16 • Let’s get into this iPhone 7! Before diving in, here are the tech specs:

- 17 • Apple A10 Fusion processor with embedded M10 motion coprocessor
- 18 • 32, 128, or 256 GB onboard storage capacity
- 19 • 4.7-inch IPS multitouch Retina HD display with 1334 x 750 pixels (326 ppi)
- 20 • 12 MP camera with f/1.8 aperture, optical image stabilization, and 5x digital zoom
- 21 • 7 MP FaceTime HD camera with f/2.2 aperture and 1080p HD recording capability
- 22 • Non-mechanical Touch ID home button driven by new Taptic Engine
- 23 • 802.11a/b/g/n/ac Wi-Fi + MIMO Bluetooth 4.2 + NFC

Sensors

- Touch ID
- Barometer
- Three-axis gyro
- Accelerometer
- Proximity sensor
- Ambient light sensor

https://support.apple.com/kb/SP705?locale=en_US (iPhone 6).

90. Claim 1 of the '689 patent recites a “lens comprising one or more lens elements, wherein the one or more lens elements include at least one movable lens element that is movable relative to the imaging apparatus,” and a “video image

1 processor communicatively connected to the image sensor and the motion sensors
 2 to receive the video data and the motion data, the processor configured to.” The
 3 ’689 accused products recite a “lens comprising one or more lens elements, wherein
 4 the one or more lens elements include at least one movable lens element that is
 5 movable relative to the imaging apparatus,” and a “video image processor
 6 communicatively connected to the image sensor and the motion sensors to receive
 7 the video data and the motion data, the processor configured to.” For example,
 8 Apple’s website and industry websites show that the ’689 accused products are
 9 configured to capture a sequence of images comprising a video and include these
 10 components.

18 31:22-32:06 “iPhone 6 has digital image stabilization. So it can try to help
 19 compensate if your hands not holding the phone steady...it can try to help it not be
 20 blurry. iPhone 6+ adds Optical Image Stabilization....**Now the lens can move up
 21 and down and side to side...**We combine that with the new gyroscope to
 22 automatically adjust the stabilizer image when taking a photo.”

Apple - September Event 2016

https://www.youtube.com/watch?v=NS0txu_Kzl8&t=482s

91. Claim 1 of the '689 patent recites “calculate shift amounts for the sequence of images based at least in part on the motion data generated by the motion sensors” and “modify the sequence of images using the calculated shift amounts.” The '689 accused products calculate shift amounts for the sequence of images based at least in part on the motion data generated by the motion sensors and modify the sequence of images using the calculated shift amounts. For example, Apple’s website and industry websites indicate that Apple’s devices, including those equipped with video stabilization (including Cinematic Video Stabilization, Action Mode, and/or Video Image Stabilization), include motion sensors configured to

1 detect motion information for one or more images of the sequence of images,
2 calculate shift amounts, and modify the sequence of images using the calculated shift
3 amounts as recited in the claim as shown by the evidence in the preceding paragraphs
4 and below. The analysis of Apple’s software images for the iPhone which indicates
5 that the AVFoundation Framework includes “GyroVideoStabilization”
6 functionality. Further, Apple’s CoreMotion gyro/accelerometer framework
7 provides metadata as an input to Apple’s audio/video capture
8 framework.³⁶ Therefore, on information and belief, motion information is used as
9 part of Apple’s digital video stabilization functionality.

Apple Special Event 2014 - iPhone 6 & iPhone 6 Plus Introduction

19 “Along with the A8 is our motion coprocessor, a new generation M8. As you know
20 this motion coprocessor works along with offloading the work from your processor
21 with all those great sensors on your phone, the accelerometer, the gyroscope, the
22 compass...”

23 <https://www.youtube.com/watch?v=0T2HCbv9FBQ> (19:00-19:40)

26
27 ³⁶ See
28 <https://developer.limneos.net/index.php?ios=12.1&framework=AVFoundation.framework&header=AVCaptureCoreMotionMetadataInput.h>.

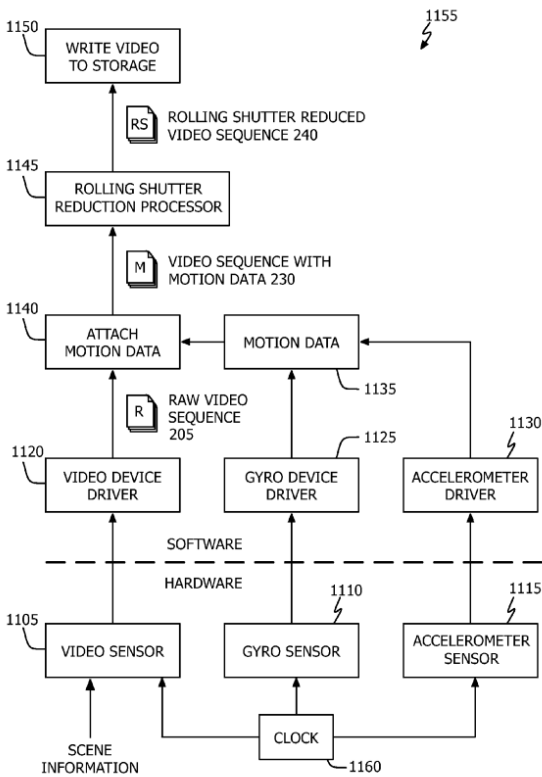

FIG. 11B

Apple U.S. Patent No. 8,913,140 (“Rolling Shutter Reduction Based on Motion Sensors”), Fig. 11B

Software Stabilization Intended For A Positive Reason?

As we have mentioned before, the software stabilization in iPhone 6 Plus does not fail to reflect an above average outcome. Considering Apple did not enable OIS for video recording, the cinematic video stabilization does its job by a software algorithm. This is the reason the video quality and stabilization differs from viewing it live and then afterwards once you're done.

“iPhone 6 Plus Uses OIS For Images and Software Stabilization For Videos”
<https://wccfttech.com/iphone-6-ois-images-software-stabilization-videos/>

92. Claim 1 of the '689 patent recites “combine the modified sequence of images to obtain a stabilized video” and a “memory connected to the video image processor for storing the stabilized video.” For example, Apple’s website and industry websites indicate that Apple’s devices, including those equipped with video stabilization (including Cinematic Video Stabilization, Action Mode, and/or Video Image Stabilization), are configured to combine the modified sequence of images to

1 obtain a stabilized video and have a memory connected to the video image processor
2 for storing the stabilized video. For example, Apple’s website and industry websites
3 explain that Apple’s devices include a processor configured to combine the modified
4 images to obtain a final video and a memory to store the final video, as shown by
5 the evidence cited in the preceding paragraph and the evidence below

6 Video

7 When you go to any video mode, the shutter button turns
8 from white to red. Tap the shutter once to start recording,
9 then tap it again to stop. While you **record your video**, you
10 can hit the white shutter button to take a still photo.

11 Want to **edit the length of your video**? Tap Edit or the edit
12 button , then move the slider to adjust the start and stop
times. Tap Done to save your changes.

13 <https://support.apple.com/en-ph/HT207260>

14 Record videos with your iPhone camera

15 Use Camera  to record videos and QuickTake videos on your iPhone. Learn how to change modes to
take Cinematic, slow-motion, and time-lapse videos.

16 *Note:* For your privacy, a green dot appears in the top-right corner of the screen when Camera is in use.
17 See [Control access to hardware features on iPhone](#).

18 Record a video

- 19 1. Open Camera, then select **Video mode**.
- 20 2. Tap the Record button or press either volume button to start recording. While recording, you can do
21 the following:
 - 22 • Press the white Shutter button to snap a still photo.
 - 23 • Pinch the screen to zoom in and out.
 - 24 • For a more precise zoom on [models with Dual and Triple camera systems](#), touch and hold 1x, then
25 drag the slider to the left.
- 26 3. Tap the Record button or press either volume button to stop recording.

26 By default, video records at 30 frames per second (fps). Depending on your model, you can choose other
27 frame rates and video resolution settings in Settings  > Camera > Record Video. Faster frame rates and
28 higher resolutions result in larger video files.

1 <https://support.apple.com/guide/iphone/record-videos-iph61f49e4bb/16.0/ios/16.0#iph91b7bd2a7>

2 93. As described above, Apple has had actual knowledge of the '689 patent,
3 including through claim charts and other information provided by Clear Imaging,
4 and actual knowledge that its activities constitute direct and/or indirect infringement
5 of the '689 patent, yet they have not ceased their infringing activities. *See* Section
6 III. Apple's infringement of the '689 patent has been and continues to be willful and
7 deliberate. Apple also has knowledge of the '689 patent by way of this complaint
8 and, to the extent they do not cease their infringing activities, their infringement is
9 and continues to be willful and deliberate.

10 94. Apple actively, knowingly, and intentionally induces infringement of
11 one or more claims of the '689 patent under 35 U.S.C. § 271(b) by actively
12 encouraging others to make, use, offer to sell, sell, and/or import '689 accused
13 products in this judicial district and elsewhere in the United States. For example,
14 Apple actively instructs, promotes, and encourages the use of the infringing features
15 in marketing materials, technical specifications, data sheets, web pages on its
16 website (e.g., www.apple.com), press releases, and user manuals, as well as at trade
17 shows (e.g., annual Apple WWDC events) and through its sales and distribution
18 channels that encourage infringing use, sales, offers to sell, and importation of the
19 '689 accused products, as evidenced at least in part by the Apple statements and
20 documents cited in this complaint. Apple user manuals for the '689 accused
21 products instruct, promote, and encourage the use of the camera capability in an
22 infringing manner. In addition, Apple documents and materials for the '689 accused
23 products instruct, promote, and encourage use of video stabilization (including
24 Cinematic Video Stabilization, Action Mode, and/or Video Image Stabilization).

25 95. Apple, by way of its infringing activities, has caused and continues to
26 cause Plaintiff to suffer damages, the exact amount to be determined at trial.
27
28

1 **COUNT IV: PATENT INFRINGEMENT OF THE '149 PATENT**

2 96. Clear Imaging incorporates by reference the preceding paragraphs as if
3 fully stated herein.

4 97. Apple has been and is now directly infringing and/or indirectly
5 infringing the '149 patent by way of inducement, literally and/or under the Doctrine
6 of Equivalents, in violation of 35 U.S.C. § 271, including by making, using, selling,
7 and/or offering for sale in the United States or importing into the United States the
8 '149 accused products.³⁷ Apple derives revenue from the activities relating to the
9 '149 accused products. As explained below, these products are covered by at least
10 one or more of the '149 patent asserted claims, including, but not limited to, claim
11 21.

12 98. Claim 21 of the '149 patent recites an “imaging apparatus for capturing
13 and processing digital images, comprising,” “a user interface for displaying a
14 preview of a field of view of the imaging apparatus, for receiving a user input, and
15 for displaying a final image,” “a camera comprising a lens having a focal length,
16 wherein the lens has one or more lens elements, and an image sensor optically
17 coupled to the lens for capturing digital images,” as shown by the exemplary
18 evidence below.

19
20
21
22
23
24
25
26
27
28 ³⁷ The '149 accused products are the same as the '740 accused products.

Take Portrait mode photos with your iPhone camera

With Camera  on [models that support Portrait mode](#), you can apply a depth-of-field effect that keeps your subject—people, pets, objects, and more—sharp while creating a beautifully blurred foreground and background. You can apply and adjust different lighting effects to your Portrait mode photos, and on iPhone X and later, you can even take a selfie in Portrait mode.

Take a photo in Portrait mode

On iPhone 8 Plus, iPhone X, and later, you can apply studio-quality lighting effects to your Portrait mode photos.

Take a photo in Portrait mode

On iPhone 8 Plus, iPhone X, and later, you can apply studio-quality lighting effects to your Portrait mode photos.

1. Open Camera, then select [Portrait mode](#).

2. Follow the tips onscreen to frame your subject in the yellow portrait box.

<https://support.apple.com/guide/iphone/take-portrait-mode-photos-iphd7d3a91a2/ios#:~:text=1%20Open%20Camera%2C%20then%20select%20Portrait%20mode.%202, Tap%20the%20Shutter%20button%20to%20take%20the%20shot.>

Portrait

Portrait mode creates a depth-of-field effect that keeps your subject sharp while blurring the background. You can use Portrait mode on iPhone 7 Plus, iPhone 8 Plus, and later. If you have an iPhone X or later, you can also take a selfie in Portrait mode. You can also use Portrait Mode with the front-facing camera on iPad Pro 11-inch (all generations) and iPad Pro 12.9-inch (3rd generation and later).

To use Portrait mode, open the Camera app and swipe to Portrait mode. Move farther away from your subject if the app suggests it. When the Depth Effect box turns yellow, take the picture.

With iPhone X and later, and iPhone 8 Plus, you can make your Portrait mode images even more captivating with studio-quality lighting effects. After you take your photo, tap Edit and choose from Studio Light, Contour Light, Stage Light, or Stage Light Mono. And with iPhone XS and later, you can create a beautiful, classic look with High-Key Light Mono.

On iPhone XR, the Stage Light, Stage Light Mono, and High-Key Light Mono effects aren't available with the rear-facing camera.

<https://support.apple.com/en-us/HT207260>

Step 1 iPhone 7 Plus Teardown

- There's a lot to learn about what's hidden inside the "best, most advanced iPhone ever"—but first, let's take a moment to review what we already know:
 - Apple A10 Fusion processor with embedded M10 motion coprocessor
 - 32, 128, and 256 GB onboard storage capacity (jet black model not available in 32 GB)
 - 5.5-inch multitouch IPS Retina HD display with 1920 × 1080 pixels (401 ppi)
 - Dual 12 MP wide-angle and telephoto cameras with *f*/1.8 and *f*/2.8 apertures (respectively), 2x optical zoom, and 10x digital zoom
 - 7 MP FaceTime HD camera with *f*/2.2 aperture and 1080p HD recording capability
 - Solid-state Home button with Touch ID, driven by new Taptic Engine
 - 802.11a/b/g/n/ac Wi-Fi + MIMO Bluetooth 4.2 + NFC

<https://www.ifixit.com/Teardown/iPhone+7+Plus+Teardown/67384>

Apple - September Event 2016

<https://nanoreview.net/en/phone-compare/apple-iphone-7-plus-vs-apple-iphone-13>

1
2 99. Claim 21 of the '149 patent recites an “imaging apparatus” comprising
3 “a memory for storing digital images and for storing a plurality of instructions for
4 executing on a processor,” and “a processor communicatively connected to the
5 memory for receiving the plurality of instructions stored therein, wherein executing
6 the instructions by the processor causes the processor to.” The '149 accused
7 products include an imaging apparatus comprising a memory for storing digital
8 images and for storing a plurality of instructions for executing on a processor, and a
9 processor communicatively connected to the memory. For example, Apple’s
10 website and industry websites explain that Apple’s accused products capture and
11 store a plurality of images, including through the use of Portrait Mode (including
12 with stand-alone pictures and Portrait Mode with FaceTime) and Cinematic Mode,
13 as shown in the examples below.

Apple iPhone 7 & 7 Plus - Camera Review from Apple WWDC 2016

1
2
3
4
5
6
7
8
9
10 A photo with a clear subject and a beautiful background is “illustrative of a great
11 camera that often has a big sensor like a full-frame sensor or a really big fast lens.
12 And the quality of the background blur, that’s what’s called Bokeh. And the higher
13 the quality of Bokeh, usually the more advanced the higher quality the lens and
14 camera system. End result is the person is almost popping off the screen. It feels 3-
15 D. **Our goal is to do something like this using the 2 cameras in the iPhone 7
16 Plus.** What the engineering team has been doing, hardware and software working
17 together, is truly remarkable...When we take a picture...**You use machine learning
18 to recognize people and faces and then create a depth map of that image from
19 the two cameras and the software. Keep the people in the front sharp and
20 focused and apply a beautiful blur to the background.** This is a huge
21 breakthrough in what can be done in smartphone photography...You select
22 “Portrait” and it automatically jumps to using the telefoto lens.

Step 1 iPhone 7 Plus Teardown Edit

- There's a lot to learn about what's hidden inside the "best, most advanced iPhone ever"—but first, let's take a moment to review what we already know:
 - Apple A10 Fusion processor with embedded M10 motion coprocessor
 - 32, 128, and 256 GB onboard storage capacity (jet black model not available in 32 GB)
 - 5.5-inch multitouch IPS Retina HD display with 1920 × 1080 pixels (401 ppi)
 - Dual 12 MP wide-angle and telephoto cameras with $f/1.8$ and $f/2.8$ apertures (respectively), 2x optical zoom, and 10x digital zoom
 - 7 MP FaceTime HD camera with $f/2.2$ aperture and 1080p HD recording capability
 - Solid-state Home button with Touch ID, driven by new Taptic Engine
 - 802.11a/b/g/n/ac Wi-Fi + MIMO Bluetooth 4.2 + NFC

<https://www.ifixit.com/Teardown/iPhone+7+Plus+Teardown/67384>

100. Claim 21 of the '149 patent recites “receive a sequence of digital images captured by the camera of the imaging apparatus,” “process the sequence of digital images to determine a designated subject and a background in the sequence of digital images by taking into account the focal length of the lens,” and “generate a final image such that the final image includes the designated subject and the background, wherein the designated subject in the final image is clear and sharp and the background in the final image is blurred.” The '149 accused products include a processor configured to receive a sequence of digital images captured by the camera, process the sequence of digital images to determine a designated subject and a background in the sequence of digital images by taking into account the focal length of the lens, and generate a final image that includes the designed subject and background, wherein the designated subject in the final image is clear and sharp and background is blurred. For example, Apple’s website and industry websites explain that the '149 accused products, including through Portrait Mode (including with stand-alone pictures and Portrait Mode with FaceTime) and Cinematic Mode, create a final image where a subject in the final image is clear and sharp and a background in the final image is blurred compared to the subject, as shown in the exemplary evidence below.

“And the second marquee feature is, of course, the Portrait mode, where the dual camera system locks into the tele camera's narrower field of view, but then **uses images from both the wide and the tele to generate a beautiful shallow depth of field effect that you'd expect from a much more expensive camera with a fast, wide-open lens.** The foreground is sharply in focus, while the background is progressively blurred in these pleasing little bouquet circles. The depth effect has

1 gotten even better in iOS 11. We've made improvements to the rendering of the out-
2 of-focus area.”

3 Transcript of WWDC 2017 Presentation Capturing Depth in iPhone Photography

5 play/wwdc2017/507/](https://web.archive.org/web/20171125053238/https://developer.apple.com/videos/play/wwdc2017/507/)

6 “When **camera one and camera two’s images are compared, remember, they**
7 **line up by optical center and look for features matching key points.** Let’s say
8 it’s dark out and the observed point may not have very well-defined features
9 anymore, the color is a little bit noisy, the edges are hard to find. Another example
10 would be if you point the cameras at a flax, white wall with no texture to it, there are
11 no features so it’s very hard to find differences in matching. For any of these reasons
12 you might have areas in your image where there is no disparity, and those are called
13 holes.”

25 ³⁸ See also Apple WWDC 2017 transcript (“On the most requested developer feature
26 for the dual camera, and that’s dual photo capture. What do I mean by this. So far,
27 when you use the dual camera and take a picture, you still just get one image. It’s
28 either from the wide or it’s from the tele, depending where you’re zoomed, or if
you’re in the area between one and 2X you might get portions of both as we do some
blending to make an even nicer picture, but you still only get one.”)

1 Thank you. First we need to define what a depth map is.

2 In the real world depth means the distance between you and an observed object.

3 A depth map is a transformation of a three-dimensional scene into a two-dimensional representation,
4 and you do that by setting the depth to a constant distance.

5 Let me explain what I mean. [I'm going to use a diagram of a](#) pinhole camera often during this
6 presentation. If you've studied computer vision, you'll be really familiar with pinhole cameras. A
7 pinhole camera is a simple lightproof box without a lens. Instead, it just has a little poked hole, a
8 single small aperture that permits light to enter in and project itself as an inverted image on the other
9 side of the image plane, or a sensor. The opposite side is known as image plane or sensor.

10 The aperture through which the light rays pass is called the focal point, and the field of view of the
11 image captured depends on the focal length. So the focal length is the distance from the focal point
12 to the image plane. A shorter focal length means wider field of view; whereas, longer focal length,
13 longer box, means narrower field of view.

14

15 Instead, we at Apple have chosen to express disparity using normalized values that are resilient to
16 scaling operations. So here's how we do that. Again, going to our observed point, you'll notice that
17 there are two similar triangles being formed. I'll highlight them for you.

18 These triangles have equal ratios of sides and proportions. Now, if I get rid of the cameras to just
19 show you the triangles, the real-world triangle sides are Z, or meters, and baseline, the distance
20 between the two optical centers.

21 Inside the light box, or the lightproof box, that same triangle is represented as the focal length in
22 pixels and the disparity in pixels. Do you feel math coming on? I feel math coming on. So stay with me
23 here. This is pretty painless.

24 Baseline is to Z as pixel disparity is to focal length.

25

26 When you attach a DepthDataOutput to your session, some things happen. The dual camera
27 automatically zooms to 2X, that is the full field of view of the tele, and that's because in order to
28 calculate disparity, the focal lengths need to be the same and at 2X zoom the wide-angle camera's
focal length matches the tele.

29 WWDC 2017

30 [http://web.archive.org/web/20220122231207/https://developer.apple.com/videos/pl
31 ay/wwdc2017/507/](http://web.archive.org/web/20220122231207/https://developer.apple.com/videos/play/wwdc2017/507/)

32 101. Claim 21 of the '149 patent recites “store the final image in the
33 memory” and “display the final image in the user interface.” The '149 accused
34 products include a memory to store the final image and a user interface to display

1 the final image. For example, Apple’s website and industry websites explain that
2 Apple’s devices include a memory and user interface configured to display the final
3 image, as shown in the evidence in the preceding paragraphs and the example
4 evidence below.

5 Take Portrait mode photos with your iPhone 6 camera

7 With Camera  on [models that support Portrait mode](#), you can apply a depth-of-field effect that keeps
8 your subject—people, pets, objects, and more—sharp while creating a beautifully blurred foreground and
9 background. You can apply and adjust different lighting effects to your Portrait mode photos, and on
10 iPhone X and later, you can even take a selfie in Portrait mode.

11 Take a photo in Portrait mode

12 On iPhone 8 Plus, iPhone X, and later, you can apply studio-quality lighting effects to your Portrait mode
13 photos.

14 Take a photo in Portrait mode

15 On iPhone 8 Plus, iPhone X, and later, you can apply studio-quality lighting effects to your Portrait mode
16 photos.

- 17 1. Open Camera, then select [Portrait mode](#).
- 18 2. Follow the tips onscreen to frame your subject in the yellow portrait box.

Step 1 iPhone 7 Plus Teardown Edit

- There's a lot to learn about what's hidden inside the "best, most advanced iPhone ever"—but first, let's take a moment to review what we already know:
 - Apple A10 Fusion processor with embedded M10 motion coprocessor
 - 32, 128, and 256 GB onboard storage capacity (jet black model not available in 32 GB)
 - 5.5-inch multitouch IPS Retina HD display with 1920 × 1080 pixels (401 ppi)
 - Dual 12 MP wide-angle and telephoto cameras with *f*/1.8 and *f*/2.8 apertures (respectively), 2x optical zoom, and 10x digital zoom
 - 7 MP FaceTime HD camera with *f*/2.2 aperture and 1080p HD recording capability
 - Solid-state Home button with Touch ID, driven by new Taptic Engine
 - 802.11a/b/g/n/ac Wi-Fi + MIMO Bluetooth 4.2 + NFC

<https://www.ifixit.com/Teardown/iPhone+7+Plus+Teardown/67384>

102. As described above, Apple has had actual knowledge of the '149 patent, including through claim charts and other information provided by Clear Imaging, and actual knowledge that its activities constitute direct and/or indirect infringement of the '149 patent, yet they have not ceased their infringing activities. *See* Section III. Apple's infringement of the '149 patent has been and continues to be willful and deliberate. Apple also has knowledge of the '149 patent by way of this complaint and, to the extent they do not cease their infringing activities, their infringement is and continues to be willful and deliberate.

103. Apple actively, knowingly, and intentionally induces infringement of one or more claims of the '149 patent under 35 U.S.C. § 271(b) by actively encouraging others to make, use, offer to sell, sell, and/or import '149 accused products in this judicial district and elsewhere in the United States. For example, Apple actively instructs, promotes, and encourages the use of the infringing features in marketing materials, technical specifications, data sheets, web pages on its website (e.g., www.apple.com), press releases, and user manuals, as well as at trade shows (e.g., annual Apple WWDC events) and through its sales and distribution

1 channels that encourage infringing use, sales, offers to sell, and importation of the
2 '149 accused products, as evidenced at least in part by the Apple statements and
3 documents cited in this complaint. Apple user manuals for the '149 accused
4 products instruct, promote, and encourage the use of the camera capability in an
5 infringing manner. In addition, Apple documents and materials for the '149 accused
6 products instruct, promote, and encourage use of Portrait Mode (including with
7 stand-alone pictures and Portrait Mode with FaceTime) and Cinematic Mode.

8 104. Apple, by way of its infringing activities, has caused and continues to
9 cause Plaintiff to suffer damages, the exact amount to be determined at trial.

10 **COUNT V: PATENT INFRINGEMENT OF THE '015 PATENT**

11 105. Clear Imaging incorporates by reference the preceding paragraphs as if
12 fully stated herein.

13 106. Apple has been and is now directly infringing and/or indirectly
14 infringing the '015 patent by way of inducement, literally and/or under the Doctrine
15 of Equivalents, in violation of 35 U.S.C. § 271, including by making, using, selling,
16 and/or offering for sale in the United States or importing into the United States the
17 '015 accused products.³⁹ Apple derives revenue from the activities relating to the
18 '015 accused products. As explained below, these products are covered by at least
19 one or more of the '015 patent asserted claims, including, but not limited to, claim
20 21.

21 107. Claim 21 of the '015 patent recites an “imaging apparatus for capturing
22 digital video and for digital processing of images and video,” a “user interface for
23 displaying a preview of a field of view of the imaging apparatus, for receiving a user
24

25
26
27 ³⁹ The '015 accused products are the Accused Products that include Cinematic Mode,
28 including all of the various models of the iPhone 13 and 14 (*e.g.*, regular, mini, Pro,
Pro Max, *etc.*).

1 input, and for displaying a final video.” The ’015 accused products include these
2 elements, as shown by the evidence below.

3 Use Cinematic mode on your iPhone

4 With Cinematic mode, your iPhone camera can record videos with a shallow depth of
5 field and add beautiful focus transitions for a cinema-grade look.

11 Before you get started

12 Make sure that you have the [latest version of iOS](#) and an iPhone that supports recording in Cinematic
13 mode:

- 14 • iPhone 14 Pro Max
- 15 • iPhone 14 Pro
- 16 • iPhone 14
- 17 • iPhone 14 Plus
- 18 • iPhone 13 Pro Max
- 19 • iPhone 13 Pro
- 20 • iPhone 13
- 21 • iPhone 13 mini

22 3. Tap the record button  to begin recording.

23 4. Tap a subject in the viewfinder to change focus as you record. Double tap to set automatic focus
24 tracking on a subject. You can also touch and hold on the screen to lock the focus at a specific
25 distance from the camera.

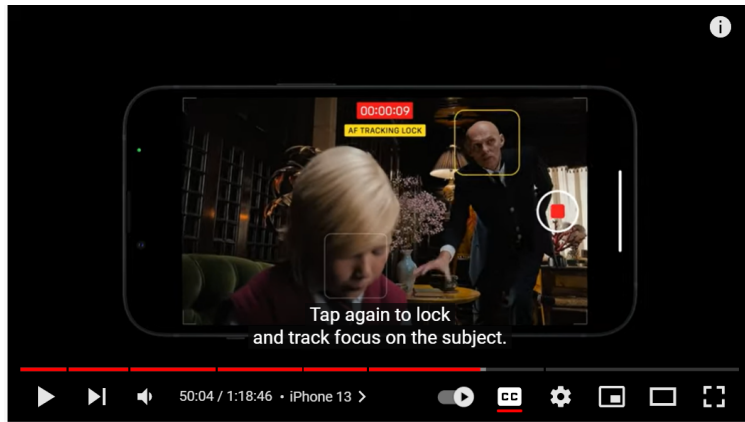

26 5. Tap the record button  again to stop recording.

21 Edit video taken in Cinematic mode

22 After you take a video in Cinematic mode, you can edit it in the Photos app on your iPhone 14 model, or on
23 [another supported device](#).

24 In addition to the standard edits that you can make to all videos, you can adjust the depth of field and the
25 focus points of a video taken in Cinematic mode.

26 <https://support.apple.com/en-us/HT212778>

6
7
8 “[With Cinematic Mode] just start recording, and cinematic mode will hold focus on
9 the subject even when they’re moving... Tap again to lock and track focus on the
10 subject”

11 <https://www.youtube.com/watch?v=EvGOIAkLSLw>

12 **What Is Cinematic Mode?**

13 Cinematic mode is a function found in [Apple’s default camera app](#). At its heart, this mode is all about
14 adding depth-of-field to shots with smooth transitions between different subjects.

15 By using multiple cameras on the back of the device, Cinematic mode can intelligently track subjects
16 as they enter or exit the scene and apply a faux [depth-of-field](#) effect not dissimilar to that seen in the
17 [iPhone’s Portrait mode](#). This delivers a much more pronounced depth-of-field effect than you’d
18 normally see in from a smartphone camera.

19 <https://www.howtogeek.com/758306/how-to-use-cinematic-mode-to-shoot-better-video-on-iphone/#:~:text=By%20using%20multiple%20cameras%20on%20the%20back%20of,normally%20see%20in%20from%20a%20smartphone%20camera.%20Apple>

20 108. Claim 21 of the ’015 patent recites a “lens comprising one or more lens
21 elements,” an “image sensor optically coupled to the lens for capturing a sequence
22 of images,” a “memory for storing images and video and for storing instructions for
23 executing by a processor,” and a “processor communicatively connected to the
24 memory for receiving the instructions stored therein, wherein the instructions by the
25 processor causes the processor to.” The ’015 accused products include these
26 elements, as shown by the evidence below.
27
28

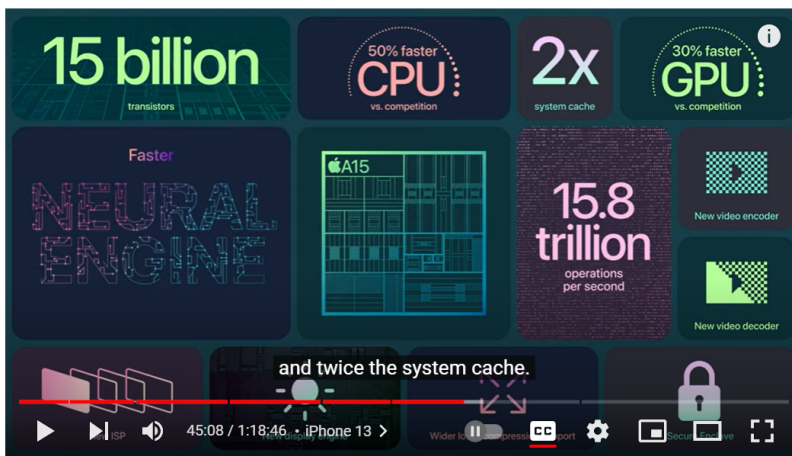

The TrueDepth camera system has been reengineered to provide more display area, while the redesigned rear camera layout with diagonally arranged lenses enables the advanced dual-camera system.

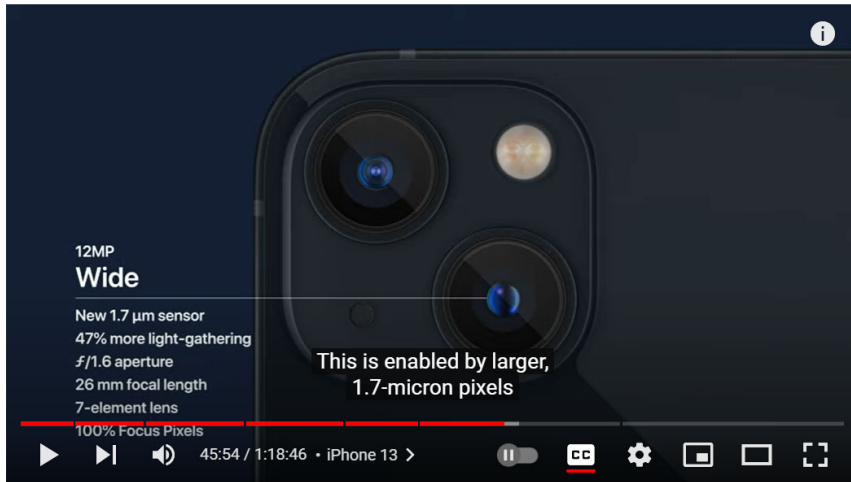

The Most Advanced Dual-Camera System in iPhone

iPhone 13 and iPhone 13 mini represent a massive leap in camera design with advancements in hardware and computational photography that deliver stunning photos and videos. The new Wide camera, with 1.7 μm pixels, comes with the biggest sensor ever in an iPhone dual-camera system and is capable of gathering 47 percent more light for less noise and brighter results. Sensor-shift OIS — a technology introduced in iPhone 12 Pro Max and not found in any other smartphone — also comes to the Wide camera, even in the more compact iPhone 13 mini. It stabilizes the sensor instead of the lens so shots are more steady, while the custom-designed Ultra Wide camera with a new sensor captures images with more detail in the dark areas of photos and videos with less noise.

<https://www.apple.com/newsroom/2021/09/apple-introduces-iphone-13-and-iphone-13-mini/>

Apple Event – September 14

Apple Event – September 14

“A15 is a powerhouse...[it has] twice the system cache. There’s nothing in the world like this chip. A15...also powers the amazing camera system on iPhone 13. It combines our powerful cameras and next-generation image signal processor, and computational photography to create our most advanced dual-camera system...[It uses] larger 1.7 micron pixels that capture more light.”

<https://www.youtube.com/watch?v=EvGOIAkLSLw>

Step 1 iPhone 13 Pro Teardown

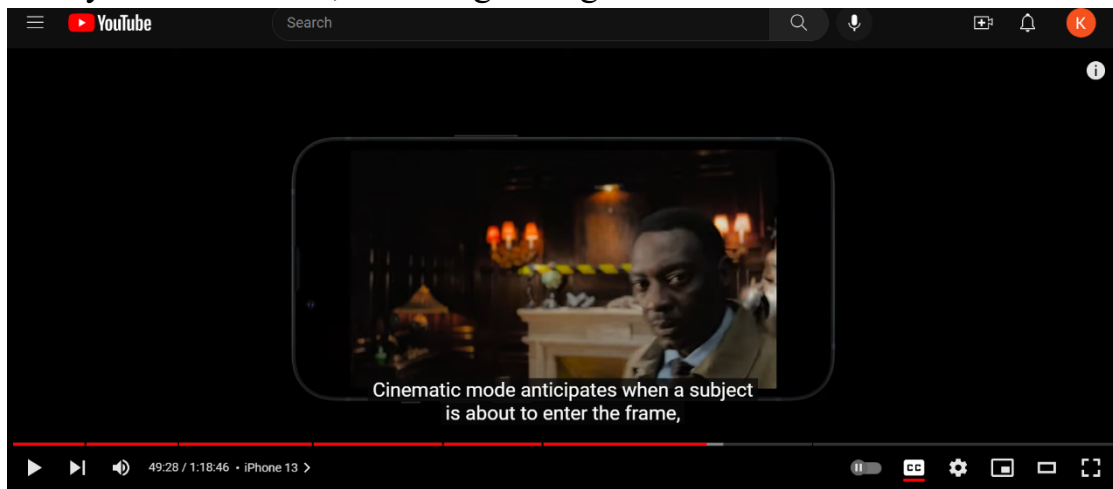

- While the regular and mini get some of the cool new tech for this generation, the iPhone 13 Pro gets it *all*. Here’s what’s on the menu:
 - A15 Bionic SoC with a new 5-core GPU, 6-core CPU, and 16-core Neural Engine
 - 6.1-inch (2532 × 1170 pixels) Super Retina XDR OLED display with ProMotion
 - 12 MP triple camera system with an ultra-wide angle ($f/1.8$), wide angle ($f/1.5$), and 3x telephoto ($f/2.8$) cameras, plus a LiDAR module.
 - 6 GB of RAM and 128 GB of storage (configurable up to 1 TB)
 - Sub-6 GHz 5G (and mmWave on the US models), 4x4 MIMO LTE, 2x2 MIMO 802.11ax Wi-Fi 6, Bluetooth 5.0, Ultra Wideband, and NFC
 - MagSafe 15 W wireless charging
 - IP68 water-resistance rating

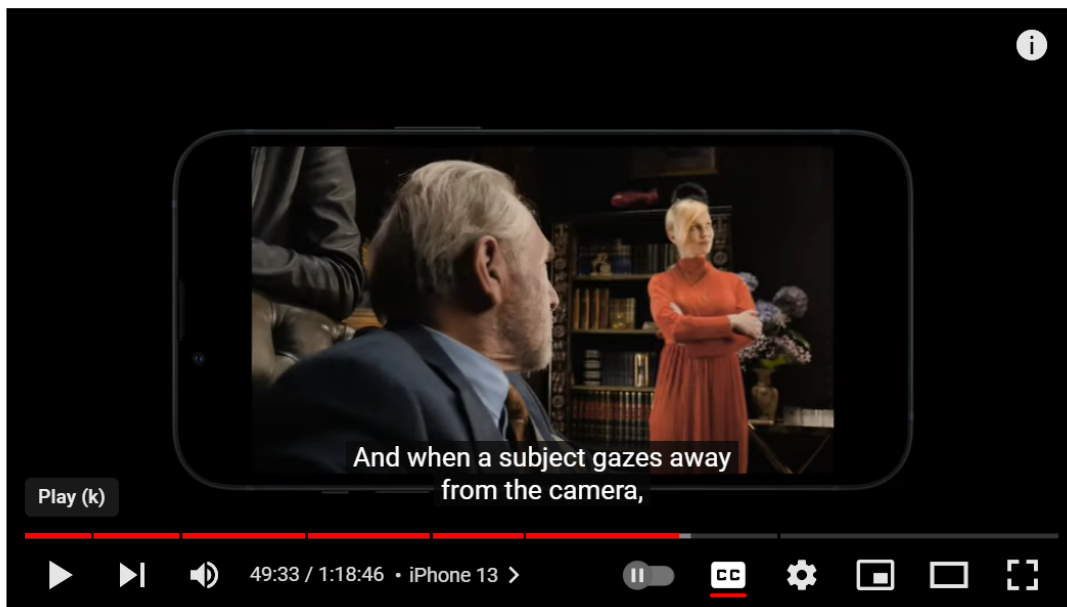

<https://www.ifixit.com/Teardown/iPhone+13+Pro+Teardown/144928>

109. Claim 21 of the '015 patent recites “receive a plurality of images from the memory,” “determine a designated subject and a background in the plurality of

1 images based at least in part on a focal length of the lens and a relative shift between
2 the plurality of images,” and “generate a final video comprising a sequence of
3 modified images, wherein each modified image is generated using two or more of
4 the plurality if images received from the memory, and wherein the final video
5 include the designated subject and the background, and the designated subject in the
6 final video is blur free and the background is blurred.” Apple’s website and industry
7 documentation describing Apple’s products show that the ’015 accused products
8 satisfy these elements, including through Cinematic Mode.

17 Apple Event – September 14

Apple Event – September 14

1 “Cinematic mode anticipates when a subject is about to enter the frame and
2 intelligently racks focus to them when they do. And when a subject gazes away
3 from the camera, iPhone itself changes focus and then back.”

4 <https://www.youtube.com/watch?v=EvGOIAkLSLw>

5
6
7
8
9
10
11
12
13 "This is really awesome when using our all-new Cinematic mode, which uses
14 machine learning and **disparity to create a depth map that's built into the**
15 **video. So you can change the depth map, including the level of bokeh and where**
16 **the focus is applied**, even after the capture. This is another iPhone first, as the
17 iPhone 13 and the iPhone 13 Pro are the only smartphones that can do this." 1:14:16

18 WWDC2021

19 <https://www.youtube.com/watch?v=EvGOIAkLSLw>

20 Edit Cinematic mode videos on your iPhone

21 On iPhone 13 models and iPhone 14 models, Cinematic mode applies a depth-of-field effect that keeps
22 the subject of your video sharp while creating a beautifully blurred foreground and background. In the
23 Photos app 🌈, you can change the focus subject where the effect is applied, and adjust the level of
24 background blur—or depth of field—in your Cinematic mode videos. You can also turn off the effect.

25 Cinematic mode videos recorded on iPhone 13 models and iPhone 14 models can be edited on iPhone Xs,
26 iPhone XR, and later models with iOS 15 or later.

27 <https://support.apple.com/en-gw/guide/iphone/iph5e602f6d6/ios>

1 The iPhone 13 and iPhone 13 mini must use parallax to determine the various
2 depths and distances present in a scene. This is where the feed of the wide and
3 ultra-wide cameras is compared, and the discrepancies between their views of
the scene can separate near objects from ones further away.

4 It may also analyze motion between frames. If you pan across a scene and
5 assume that objects themselves are static, you can judge their relative distance
6 by the amounts they move frame-to-frame. However, it seems unlikely that

7 [https://www.techradar.com/news/what-is-cinematic-mode-the-iphone-13s-new-](https://www.techradar.com/news/what-is-cinematic-mode-the-iphone-13s-new-video-focusing-trick-explained)
8 [video-focusing-trick-explained](https://www.techradar.com/news/what-is-cinematic-mode-the-iphone-13s-new-video-focusing-trick-explained)

9 Thank you. First we need to define what a depth map is.

10 In the real world depth means the distance between you and an observed object.

11 A depth map is a transformation of a three-dimensional scene into a two-dimensional representation,
12 and you do that by setting the depth to a constant distance.

13 Let me explain what I mean. [I'm going to use a diagram of a](#) pinhole camera often during this
14 presentation. If you've studied computer vision, you'll be really familiar with pinhole cameras. A
15 pinhole camera is a simple lightproof box without a lens. Instead, it just has a little poked hole, a
single small aperture that permits light to enter in and project itself as an inverted image on the other
side of the image plane, or a sensor. The opposite side is known as image plane or sensor.

16 The aperture through which the light rays pass is called the focal point, and the field of view of the
17 image captured depends on the focal length. So the focal length is the distance from the focal point
to the image plane. A shorter focal length means wider field of view; whereas, longer focal length,
longer box, means narrower field of view.

18

19 Instead, we at Apple have chosen to express disparity using normalized values that are resilient to
20 scaling operations. So here's how we do that. Again, going to our observed point, you'll notice that
21 there are two similar triangles being formed. I'll highlight them for you.

22 These triangles have equal ratios of sides and proportions. Now, if I get rid of the cameras to just
23 show you the triangles, the real-world triangle sides are Z , or meters, and baseline, the distance
between the two optical centers.

24 Inside the light box, or the lightproof box, that same triangle is represented as the focal length in
25 pixels and the disparity in pixels. Do you feel math coming on? I feel math coming on. So stay with me
here. This is pretty painless.

26 Baseline is to Z as pixel disparity is to focal length.

27

1 When you attach a DepthDataOutput to your session, some things happen. The dual camera
2 automatically zooms to 2X, that is the full field of view of the tele, and that's because in order to
3 calculate disparity, the focal lengths need to be the same and at 2X zoom the wide-angle camera's
focal length matches the tele.

The TrueDepth camera system has been reengineered to provide more display area, while the redesigned rear camera layout with diagonally arranged lenses enables the advanced dual-camera system.

The Most Advanced Dual-Camera System in iPhone

iPhone 13 and iPhone 13 mini represent a massive leap in camera design with advancements in hardware and computational photography that deliver stunning photos and videos. The new Wide camera, with 1.7 μm pixels, comes with the biggest sensor ever in an iPhone dual-camera system and is capable of gathering 47 percent more light for less noise and brighter results. Sensor-shift OIS — a technology introduced in iPhone 12 Pro Max and not found in any other smartphone — also comes to the Wide camera, even in the more compact iPhone 13 mini. It stabilizes the sensor instead of the lens so shots are more steady, while the custom-designed Ultra Wide camera with a new sensor captures images with more detail in the dark areas of photos and videos with less noise.

<https://www.apple.com/newsroom/2021/09/apple-introduces-iphone-13-and-iphone-13-mini/>

117. Claim 11 of the '254 patent recites an “image sensor optically coupled to the lens for capturing digital images wherein the image sensor is movable inside the imaging apparatus,” “one or more image sensor adjusters that are coupled to the image sensor for moving the image sensor,” and “one or more motion sensors for detecting motion of the imaging apparatus and for generating a motion information based on the detected motion.”

8 “[iPhone 12 Pro Max] introduced an amazing advanced technology, sensor-shift
9 optical image stabilization. And incredibly, we are bringing this to iPhone 13 and
10 iPhone 13 mini.”

<https://www.youtube.com/watch?v=EvGOIAkLSLw>

21 Apple Event — October 13

22 YouTube · 60.6M views · Oct 13, 2020

23 “[W]e developed a completely new system for optical image stabilization that adopts
24 a high-end DSLR approach called sensor-shift. Sensor shift applies stabilization to
25 the sensor instead of the heavier lens to precisely control motion in X and Y while
26 maintaining sharpness. This cancels both low and high-frequency disturbances like
27 hand movement or vibrations in a car...Along with motion processing
28 advancements, we get stabilized exposure times of up to two seconds in low light
for handheld shots. This sensor-shift system is unique to Apple and helps people
capture everyday situations...and it delivers steady video with a truly cinematic
feel.”

1 <https://www.bing.com/videos/search?q=Apple+Event+%E2%80%94+October+13+-+YouTube%2f&view=detail&mid=4335AEB551C4FDB126E54335AEB551C4FDB126E5&FORM=VIRE>

4 Sensor shift stabilization is coming to all iPhone 13 models and it is the biggest innovation in stabilization technology on phones in literally a decade, so you might be wondering what exactly is *sensor shift stabilization* and how it is different from the *optical image stabilization* (OIS) that most phones have used so far?

- 7 ...
- 8 • With sensor shift stabilization, the lens unit doesn't move, but it is instead the sensor that moves around and even faster, with up to 5,000 adjustments per second. Having that adjustment directly where the image capture happens, at the sensor, results in improved results.

10 ...
11 So the theory boils down to those tiny electromagnetic actuators that with OIS moved the lens around based on data from a gyroscope, while with sensor shift, it the sensor instead of the lens. Since the sensor is actually lighter than the lenses, this approach should mean it is faster to correcting movements.

14 https://www.phonearena.com/news/What-is-sensor-shift-stabilization-vs-OIS_id133572

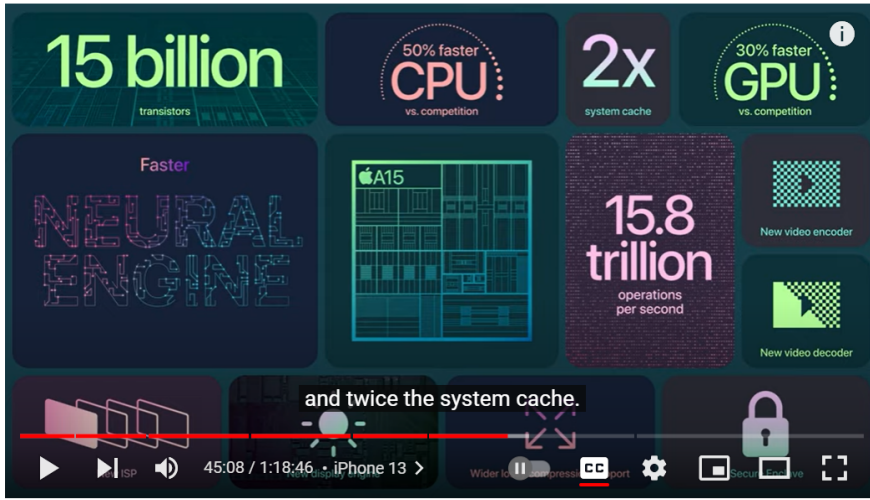

16 **Sensors**

DEEP FUSION technology, 24millions of pixels, iPhone 11pro by @Apple
YouTube · 16.1K views · Sep 10, 2019 · by TEG MAG

Discussing Deep Fusion and stating “It shoots 9 images. Before you press the shutter button, it’s already shot four short images, four secondary images, and when you press the shutter button it takes one long exposure and then in just one second the neural engine analyzes the fused combination of long and short images picking the best among them, selecting all the pixels, and pixel by pixel and going through 24 million pixels to optimize for detail and low noise. It is amazing.”

<https://www.bing.com/videos/search?q=DEEP+FUSION+technology+%2c+24millions+of+pixels+%2c+iPhone+11pro+by+%40Apple+-+YouTube&docid=608051349794999617&mid=C2D867B5A040F8BABCC6C2D867B5A040F8BABCC6&view=detail&FORM=VIR>

Rather than having a button or an option to enable Deep Fusion on the iPhone camera, instead Apple has designed Deep Fusion to happen automatically when it’s optimal, without user involvement.

In other words, Deep Fusion is enabled by itself, but only when the iPhone camera sensor detects that it would improve a photo taken on the iPhone.

....

1 In short, in proper lighting situations, the iPhone camera will snap a series of nine photos of
2 the same scene, then Deep Fusion uses machine learning to determine which of the
3 combinations of the photos will result in the sharpest and best possible picture. That may
4 mean blending components of those nine photos together to get the best possible
5 resolution and quality of an image.

6 ...

7 Because Deep Fusion photos are not marked in EXIF or metadata, it can be challenging to
8 figure out which exactly are using the camera technology, but if a photo looks especially
9 great and sharp, it's a good bet it was snapped with Deep Fusion on the iPhone 11, iPhone
10 11 Pro, or iPhone 11 Pro Max, iPhone 12, iPhone 12 Pro, or iPhone 12 Pro Max, or better.

11 <https://osxdaily.com/2020/02/29/how-use-deep-fusion-iphone-11-camera/>

20 “This is a feature that pro photographers are going to love. Photographic Styles
21 bring your individual preferences right into our advanced image pipeline, applying
22 local edits like a photo editor would, but in real time as we render the photo. That
23 means you get all the benefits of our **multi-frame image processing pipeline** with
24 the ability to customize it in a way you could never achieve with a simple
25 filter.” 1:09:26

26 WWDC2021

27 <https://www.youtube.com/watch?v=EvGOIAkLSLw>

iPhone 11 keynote in 5 minutes

(discussing “image fusion” and then stating “Now let’s discuss Night Mode... it intelligently fuse images together reducing motion and blur”).

<https://www.bing.com/videos/riverview/relatedvideo?&q=iPhone+11+keynote+in+5+minutes++YouTube&&mid=FB7A88DF69CD1E816A36FB7A88DF69CD1E816A36&&FORM=VRDGA>

Craig Federighi, SVP Software Engineering, says, “A really great sensor is only the beginning of how iPhone 5S takes really amazing photos and video.”

“In low light, iPhone 5S uses the new auto image stabilization,” he says. “When you press the shutter, it imperceptibly takes up to four very quick photos, intelligently merging them to reduce blurring from camera shake and subject motion. And in really low light, it uses the all new True Tone flash. iPhone 5S measures the color temperature of the available light, then fires the white and amber flashes together in just the right ratio to create a balanced image. The colors in your photos will look truer your skin tones more natural.”

...

“Any digital camera is only as good as its sensor,” explains Dan Riccio, Apple SVP, Hardware Engineering. “While more pixels produce a bigger picture, we prefer bigger pixels because they mean an even better picture. With iPhone 5S we started with a wider f2.2 aperture. That combined with our new state of the art 8 megapixel backside-illuminated CMOS sensor that is fifteen percent larger than before means each 1.5 micron pixel can convert thirty-three percent more light into image data. This is all processed by the new A7 chip with 64-bit desktop class architecture.”

121. As described above, Apple has had actual knowledge of the '254 patent (or at the very least actual knowledge of the specification of the '254 patent) and actual knowledge that its activities constitute direct and/or indirect infringement of the '254 patent (at the very least by the filing of this complaint), yet they have not ceased their infringing activities. *See* Section III. Apple's infringement of the '254 patent has been and continues to be willful and deliberate. Apple also has knowledge of the '254 patent by way of this complaint and, to the extent they do not cease their infringing activities, their infringement is and continues to be willful and deliberate.

122. Apple actively, knowingly, and intentionally induces infringement of one or more claims of the '254 patent under 35 U.S.C. § 271(b) by actively encouraging others to make, use, offer to sell, sell, and/or import '254 accused products in this judicial district and elsewhere in the United States. For example, Apple actively instructs, promotes, and encourages the use of the infringing features in marketing materials, technical specifications, data sheets, web pages on its

1 website (e.g., www.apple.com), press releases, and user manuals, as well as at trade
2 shows (e.g., annual Apple WWDC events) and through its sales and distribution
3 channels that encourage infringing use, sales, offers to sell, and importation of the
4 '254 accused products, as evidenced at least in part by the Apple statements and
5 documents cited in this complaint. Apple user manuals for the '254 accused
6 products instruct, promote, and encourage the use of the camera capability in an
7 infringing manner. In addition, Apple documents and materials for the '254 accused
8 products instruct, promote, and encourage use of Apple's image stabilization
9 (including Sensor-Shift Stabilization, Auto Image Stabilization, Deep Fusion, Multi-
10 Frame Image Processing, and/or Night Mode).

11 123. Apple, by way of its infringing activities, has caused and continues to
12 cause Plaintiff to suffer damages, the exact amount to be determined at trial.

13 **COUNT VII: PATENT INFRINGEMENT OF THE '391 PATENT**

14 124. Clear Imaging incorporates by reference the preceding paragraphs as if
15 fully stated herein.

16 125. Apple has been and is now directly infringing and/or indirectly
17 infringing the '391 patent by way of inducement, literally and/or under the Doctrine
18 of Equivalents, in violation of 35 U.S.C. § 271, including by making, using, selling,
19 and/or offering for sale in the United States or importing into the United States the
20 "'391 accused products."⁴¹ Apple derives revenue from the activities relating to the
21 '391 accused products. As explained below, these products are covered by one or
22 more claims of the '391 patent, including but not limited to, Claim 8.

23 126. Claim 8 of the '391 patent recites an "imaging apparatus for capturing
24 and digitally processing video, comprising," a "user interface for displaying a
25 preview of a field of view of the imaging apparatus, for receiving user input, and for
26 displaying a final video," "one or more lenses," and "one or more image sensors
27

28 ⁴¹ The '391 accused products are the same as the '015 accused products.

1 optically coupled to the one or more lenses for capturing an image data representing
2 a sequence of images.” The ’391 patent accused products recite these elements as
3 shown by the evidence below.

4 Use Cinematic mode on your iPhone

5 With Cinematic mode, your iPhone camera can record videos with a shallow depth of
6 field and add beautiful focus transitions for a cinema-grade look.

12 Before you get started

13 Make sure that you have the [latest version of iOS](#) and an iPhone that supports recording in Cinematic
14 mode:

- 15 • iPhone 14 Pro Max
- 16 • iPhone 14 Pro
- 17 • iPhone 14
- 18 • iPhone 14 Plus
- 19 • iPhone 13 Pro Max
- 20 • iPhone 13 Pro
- 21 • iPhone 13
- 22 • iPhone 13 mini

23 3. Tap the record button  to begin recording.

24 4. Tap a subject in the viewfinder to change focus as you record. Double tap to set automatic focus
25 tracking on a subject. You can also touch and hold on the screen to lock the focus at a specific
26 distance from the camera.

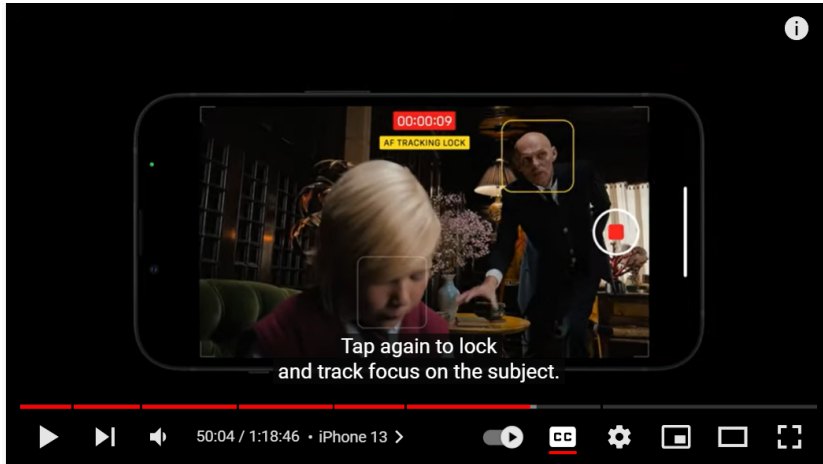

27 5. Tap the record button  again to stop recording.

28 Edit video taken in Cinematic mode

After you take a video in Cinematic mode, you can edit it in the Photos app on your iPhone 14 model, or on
[another supported device](#).

In addition to the standard edits that you can make to all videos, you can adjust the depth of field and the
focus points of a video taken in Cinematic mode.

<https://support.apple.com/en-us/HT212778>

8 “[With Cinematic Mode] just start recording, and cinematic mode will hold focus on
 9 the subject even when they’re moving...Tap again to lock and track focus on the
 10 subject”

<https://www.youtube.com/watch?v=EvGOIAkLSLw>

11 What Is Cinematic Mode?

12 Cinematic mode is a function found in [Apple’s default camera app](#). At its heart, this mode is all about
 13 adding depth-of-field to shots with smooth transitions between different subjects.

14 By using multiple cameras on the back of the device, Cinematic mode can intelligently track subjects
 15 as they enter or exit the scene and apply a faux [depth-of-field](#) effect not dissimilar to that seen in the
 16 [iPhone’s Portrait mode](#). This delivers a much more pronounced depth-of-field effect than you’d
 normally see in from a smartphone camera.

<https://www.howtogeek.com/758306/how-to-use-cinematic-mode-to-shoot-better-video-on-iphone/#:~:text=By%20using%20multiple%20cameras%20on%20the%20back%20of,normally%20see%20in%20from%20a%20smartphone%20camera.%20Apple>

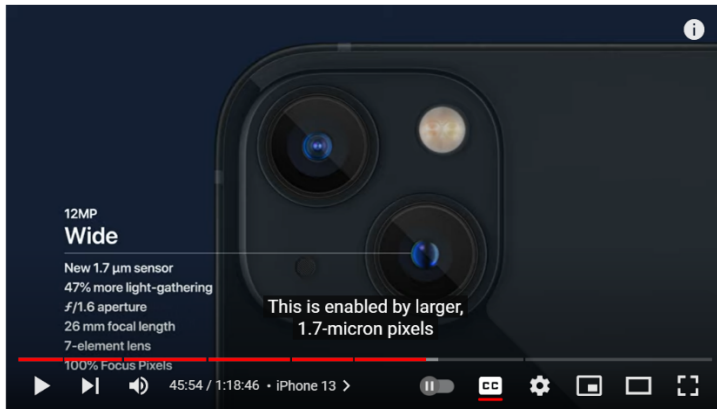

27 The TrueDepth camera system has been reengineered to provide more display area, while the
 28 redesigned rear camera layout with diagonally arranged lenses enables the advanced dual-camera
 system.

The Most Advanced Dual-Camera System in iPhone

iPhone 13 and iPhone 13 mini represent a massive leap in camera design with advancements in hardware and computational photography that deliver stunning photos and videos. The new Wide camera, with 1.7 μm pixels, comes with the biggest sensor ever in an iPhone dual-camera system and is capable of gathering 47 percent more light for less noise and brighter results. Sensor-shift OIS — a technology introduced in iPhone 12 Pro Max and not found in any other smartphone — also comes to the Wide camera, even in the more compact iPhone 13 mini. It stabilizes the sensor instead of the lens so shots are more steady, while the custom-designed Ultra Wide camera with a new sensor captures images with more detail in the dark areas of photos and videos with less noise.

<https://www.youtube.com/watch?v=EvGOIAkLSLw>

127. Claim 8 of the '391 patent recites “a memory for storing the image data and for storing an instructions for executing on a processor” and “a processor communicatively connected to the memory for receiving the instructions stored therein, wherein executing the instructions by the processor causes the processor to.” The '391 patent accused products recite these elements as shown by the evidence below.

Apple Event – September 14

<https://www.youtube.com/watch?v=EvGOIAkLSLw>

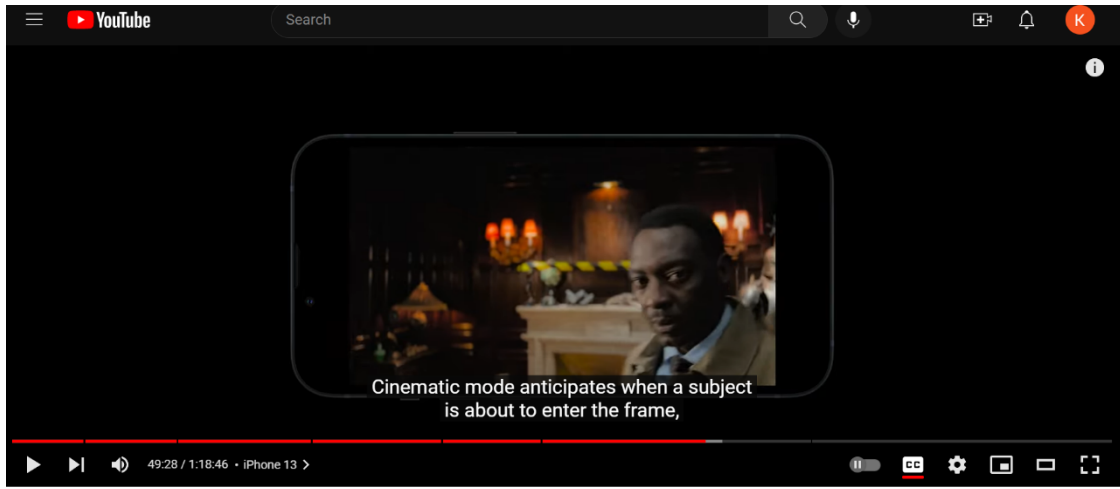

Step 1 iPhone 13 Pro Teardown

- While the regular and mini get some of the cool new tech for this generation, the iPhone 13 Pro gets it *all*. Here's what's on the menu:
 - A15 Bionic SoC with a new 5-core GPU, 6-core CPU, and 16-core Neural Engine
 - 6.1-inch (2532 × 1170 pixels) Super Retina XDR OLED display with ProMotion
 - 12 MP triple camera system with an ultra-wide angle (*f*/1.8), wide angle (*f*/1.5), and 3x telephoto (*f*/2.8) cameras, plus a LiDAR module.
 - 6 GB of RAM and 128 GB of storage (configurable up to 1 TB)
 - Sub-6 GHz 5G (and mmWave on the US models), 4x4 MIMO LTE, 2x2 MIMO 802.11ax Wi-Fi 6, Bluetooth 5.0, Ultra Wideband, and NFC
 - MagSafe 15 W wireless charging
 - IP68 water-resistance rating

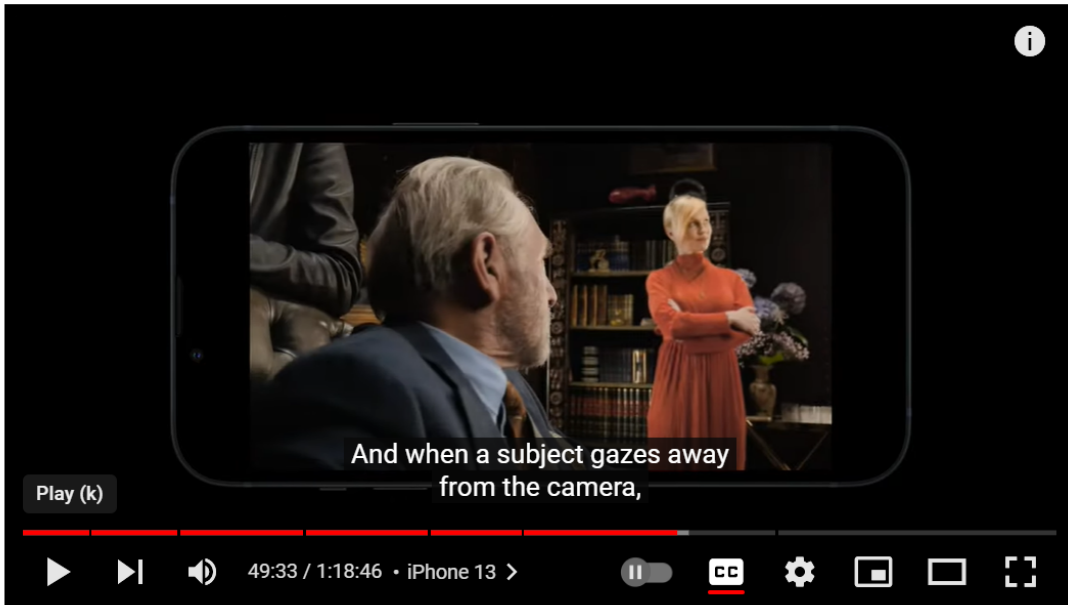

<https://www.ifixit.com/Teardown/iPhone+13+Pro+Teardown/144928>

128. Claim 8 of the '391 patent recites “read the image data representing the sequence of images from the memory of the imaging apparatus” and “designate a main subject and a background in the sequence of images based on digital processing of two or more of the sequence of images.” The '391 patent accused products recite these elements as shown by the evidence below.

Apple Event – September 14

“Cinematic mode anticipates when a subject is about to enter the frame and intelligently racks focus to them when they do. And when a subject gazes away from the camera, iPhone itself changes focus and then back.”

<https://www.youtube.com/watch?v=EvGOIAkLSLw>

"This is really awesome when using our all-new Cinematic mode, which uses machine learning and **disparity to create a depth map that's built into the video. So you can change the depth map, including the level of bokeh and where the focus is applied, even after the capture.** This is another iPhone first, as the iPhone 13 and the iPhone 13 Pro are the only smartphones that can do this." 1:14:16

WWDC2021

<https://www.youtube.com/watch?v=EvG0IAkLSLw>

Edit Cinematic mode videos on your iPhone

On iPhone 13 models and iPhone 14 models, Cinematic mode applies a depth-of-field effect that keeps the subject of your video sharp while creating a beautifully blurred foreground and background. In the Photos app 🌈, you can change the focus subject where the effect is applied, and adjust the level of background blur—or depth of field—in your Cinematic mode videos. You can also turn off the effect.

Cinematic mode videos recorded on iPhone 13 models and iPhone 14 models can be edited on iPhone Xs, iPhone Xr, and later models with iOS 15 or later.

<https://support.apple.com/en-gw/guide/iphone/iph5e602f6d6/ios>

The iPhone 13 and iPhone 13 mini must use parallax to determine the various depths and distances present in a scene. This is where the feed of the wide and ultra-wide cameras is compared, and the discrepancies between their views of the scene can separate near objects from ones further away.

It may also analyze motion between frames. If you pan across a scene and assume that objects themselves are static, you can judge their relative distance by the amounts they move frame-to-frame. However, it seems unlikely that

1 [https://www.techradar.com/news/what-is-cinematic-mode-the-iphone-13s-new-](https://www.techradar.com/news/what-is-cinematic-mode-the-iphone-13s-new-video-focusing-trick-explained)
2 [video-focusing-trick-explained](https://www.techradar.com/news/what-is-cinematic-mode-the-iphone-13s-new-video-focusing-trick-explained)

3 Thank you. First we need to define what a depth map is.

4 In the real world depth means the distance between you and an observed object.

5 A depth map is a transformation of a three-dimensional scene into a two-dimensional representation, and you do that by setting the depth to a constant distance.

6 Let me explain what I mean. I'm going to use a diagram of a pinhole camera often during this presentation. If you've studied computer vision, you'll be really familiar with pinhole cameras. A pinhole camera is a simple lightproof box without a lens. Instead, it just has a little poked hole, a single small aperture that permits light to enter in and project itself as an inverted image on the other side of the image plane, or a sensor. The opposite side is known as image plane or sensor.

7
8 The aperture through which the light rays pass is called the focal point, and the field of view of the image captured depends on the focal length. So the focal length is the distance from the focal point to the image plane. A shorter focal length means wider field of view; whereas, longer focal length, longer box, means narrower field of view.

9
10 The focal length is that constant distance by which real world distances are flattened into a 2D image. Put simply, a depth map is a transformation of a 3D depth into a 2D, single channel image where each pixel value is a different depth, like five meters, four meters, three meters.

11
12
13

14 Instead, we at Apple have chosen to express disparity using normalized values that are resilient to scaling operations. So here's how we do that. Again, going to our observed point, you'll notice that there are two similar triangles being formed. I'll highlight them for you.

15
16 These triangles have equal ratios of sides and proportions. Now, if I get rid of the cameras to just show you the triangles, the real-world triangle sides are Z, or meters, and baseline, the distance between the two optical centers.

17
18 Inside the light box, or the lightproof box, that same triangle is represented as the focal length in pixels and the disparity in pixels. Do you feel math coming on? I feel math coming on. So stay with me here. This is pretty painless.

19
20 Baseline is to Z as pixel disparity is to focal length.

21
22
23

24 When you attach a DepthDataOutput to your session, some things happen. The dual camera automatically zooms to 2X, that is the full field of view of the tele, and that's because in order to calculate disparity, the focal lengths need to be the same and at 2X zoom the wide-angle camera's focal length matches the tele.

25 WWDC 2017

26 [http://web.archive.org/web/20220122231207/https://developer.apple.com/videos/pl](http://web.archive.org/web/20220122231207/https://developer.apple.com/videos/play/wwdc2017/507/)
27 [ay/wwdc2017/507/](http://web.archive.org/web/20220122231207/https://developer.apple.com/videos/play/wwdc2017/507/)

1 **That depth map created by the wide-angle lens**
2 **is crucial to the end result, because it helps**
3 **Apple's image signal processor figure out what**
4 **should be sharp and what should be blurred.**

Courtesy of Melia Robinson

12 <https://www.businessinsider.com/apple-iphone-portrait-mode-explained-2017-10#that-depth-map-created-by-the-wide-angle-lens-is-crucial-to-the-end-result-because-it-helps-apples-image-signal-processor-figure-out-what-should-be-sharp-and-what-should-be-blurred-3>

15 129. Claim 8 of the '391 patent recites “obtain a sequence of modified
16 images for use in a final video, wherein pixel values for each modified image is
17 calculated using pixel values of the two or more images of the sequence of images
18 such that the main subject in the modified image is blur free and the background is
19 blurred.” The '391 patent accused products recite these elements as shown by the
20 evidence below and in the preceding paragraphs.

"This is really awesome when using our all-new Cinematic mode, which uses machine learning and **disparity to create a depth map that's built into the video. So you can change the depth map, including the level of bokeh and where the focus is applied, even after the capture.** This is another iPhone first, as the iPhone 13 and the iPhone 13 Pro are the only smartphones that can do this." 1:14:16

WWDC2021

<https://www.youtube.com/watch?v=EvGOIAkLSLw>

Thank you. First we need to define what a depth map is.

In the real world depth means the distance between you and an observed object.

A depth map is a transformation of a three-dimensional scene into a two-dimensional representation, and you do that by setting the depth to a constant distance.

Let me explain what I mean. I'm going to use a diagram of a pinhole camera often during this presentation. If you've studied computer vision, you'll be really familiar with pinhole cameras. A pinhole camera is a simple lightproof box without a lens. Instead, it just has a little poked hole, a single small aperture that permits light to enter in and project itself as an inverted image on the other side of the image plane, or a sensor. The opposite side is known as image plane or sensor.

The aperture through which the light rays pass is called the focal point, and the field of view of the image captured depends on the focal length. So the focal length is the distance from the focal point to the image plane. A shorter focal length means wider field of view; whereas, longer focal length, longer box, means narrower field of view.

The focal length is that constant distance by which real world distances are flattened into a 2D image. Put simply, a depth map is a transformation of a 3D depth into a 2D, single channel image where each pixel value is a different depth, like five meters, four meters, three meters.

....

1 Instead, we at Apple have chosen to express disparity using normalized values that are resilient to
2 scaling operations. So here's how we do that. Again, going to our observed point, you'll notice that
3 there are two similar triangles being formed. I'll highlight them for you.

4 These triangles have equal ratios of sides and proportions. Now, if I get rid of the cameras to just
5 show you the triangles, the real-world triangle sides are Z, or meters, and baseline, the distance
6 between the two optical centers.

7 Inside the light box, or the lightproof box, that same triangle is represented as the focal length in
8 pixels and the disparity in pixels. Do you feel math coming on? I feel math coming on. So stay with me
9 here. This is pretty painless.

10 Baseline is to Z as pixel disparity is to focal length.

11

12 When you attach a DepthDataOutput to your session, some things happen. The dual camera
13 automatically zooms to 2X, that is the full field of view of the tele, and that's because in order to
14 calculate disparity, the focal lengths need to be the same and at 2X zoom the wide-angle camera's
15 focal length matches the tele.

16 ...

17 The focus actuators are actually springs to which an electrical current is applied. So all of these
18 reasons might cause it to move around laterally a little bit, and these very small errors in optical
19 center position can result in large errors in disparity.

20 When this occurs, the result is a constant amount of error in every pixel in the map.

21 ...

22 f_x and f_y are the pixel focal length. They're separate x and y values because sometimes cameras
23 have anamorphic lens or anamorphic pixels. On iOS devices, our cameras always have square pixels,
24 so f_x and f_y are always going to be the same value.

25 Then x_{naught} and y_{naught} are the pixel coordinates of the lens' principal point, or optical center.
26 These are all in pixel values and they're given at the resolution of the video buffer with which they're
27 provided. So, once you've opted in, you can expect to get sample buffers in a streaming fashion and
28 you can get this attachment from them, and the payload is a C/F data that wraps a matrix float 3x3,
which is a SIMD data type. If you're doing computer vision, you'll be really interested in this new
feature.

22 WWDC 2017

23 [http://web.archive.org/web/20220122231207/https://developer.apple.com/videos/pl
24 ay/wwdc2017/507/](http://web.archive.org/web/20220122231207/https://developer.apple.com/videos/play/wwdc2017/507/)

25 130. Claim 8 of the '391 patent recites "combine the sequence of modified
26 images to obtain the final video," "store the final video in the memory," and "display
27 the final video in the user interface." The '391 patent accused products recite these
28 elements as shown by the evidence in the preceding paragraphs and below.

Use Cinematic mode on your iPhone

With Cinematic mode, your iPhone camera can record videos with a shallow depth of field and add beautiful focus transitions for a cinema-grade look.

131. As described above, Apple has had actual knowledge of the '391 patent (or at the very least actual knowledge of the specification of the '391 patent) and actual knowledge that its activities constitute direct and/or indirect infringement of the '391 patent (at the very least by the filing of this complaint), yet they have not ceased their infringing activities. See Section III. Apple's infringement of the '391 patent has been and continues to be willful and deliberate. Apple also has knowledge

1 of the '391 patent by way of this complaint and, to the extent they do not cease their
2 infringing activities, their infringement is and continues to be willful and deliberate.

3 132. Apple actively, knowingly, and intentionally induces infringement of
4 one or more claims of the '391 patent under 35 U.S.C. § 271(b) by actively
5 encouraging others to make, use, offer to sell, sell, and/or import '391 accused
6 products in this judicial district and elsewhere in the United States. For example,
7 Apple actively instructs, promotes, and encourages the use of the infringing features
8 in marketing materials, technical specifications, data sheets, web pages on its
9 website (e.g., www.apple.com), press releases, and user manuals, as well as at trade
10 shows (e.g., annual Apple WWDC events) and through its sales and distribution
11 channels that encourage infringing use, sales, offers to sell, and importation of the
12 '391 accused products, as evidenced at least in part by the Apple statements and
13 documents cited in this complaint. Apple user manuals for the '391 accused
14 products instruct, promote, and encourage the use of the camera capability in an
15 infringing manner. In addition, Apple documents and materials for the '391 accused
16 products instruct, promote, and encourage use of Cinematic Mode.

17 133. Apple, by way of its infringing activities, has caused and continues to
18 cause Plaintiff to suffer damages, the exact amount to be determined at trial.

19 **PRAYER FOR RELIEF**

20 WHEREFORE, Plaintiff prays for the following relief:

21 134. A judgment in favor of Plaintiff that Apple has infringed, directly and
22 indirectly, by way of inducement, literally and/or under the doctrine of equivalents,
23 the patents-in-suit;

24 135. An award of damages to which Plaintiff is entitled under 35 U.S.C. §
25 284, 35 U.S.C. § 286, and 35 U.S.C. § 154(d) for Apple's past infringement and any
26 continuing or infringement including post-trial up until the date a final judgment is
27
28

1 entered, including both compensatory damages and treble damages for willful
2 infringement;

3 136. Plaintiff's actual damages in an amount sufficient to compensate
4 Plaintiff for Apple's infringement of the patents-in-suit until such time as Apple
5 ceases its infringing conduct, including supplemental damages post-verdict.

6 137. A judgment and order against Apple for exemplary damages as
7 determined by the trier of fact;

8 138. A judgment that Apple's infringement has been willful;

9 139. Pre- and post-judgment interest as allowed by law on any damages
10 awarded to Plaintiff;

11 140. A judgment and order requiring Apple to pay the costs of this action
12 (including all disbursements), as well as attorneys' fees as provided by 35 U.S.C. §
13 285;

14 141. A judgment and order requiring Apple to pay to Plaintiff compulsory
15 ongoing licensing fees, as determined by the Court in equity; and

16 142. Such other and further relief in law or in equity to which Plaintiff may
17 be justly entitled.

18 **DEMAND FOR JURY TRIAL**

19 Plaintiff demands a trial by jury of any and all issues triable of right before a jury.
